4. Investment Objective

The Fund's investment objective is to outperform the Index and to achieve long-term growth by investing in a portfolio of small cap equity and equity-related securities of companies located in developed markets.

5. Investment Policy

In pursuit of its investment objective, the Fund will invest primarily, either directly or indirectly (through investment in underlying collective investment schemes), in small cap equity and equity-related securities (including, but not limited to, warrants, convertibles, rights which are issued by a company to allow holders to subscribe for additional securities issued by that company, ADRs and GDRs) listed or traded on Recognised Exchanges in developed markets.

The Fund may invest, from time to time, up to 10% of net assets in UCITS and alternative investment funds (which fall within the requirements set out in the Central Bank's guidance), which have an investment policy in line with the investment policy of the Fund. Such UCITS will be domiciled in the EU and such alternative investment funds will be domiciled worldwide.

Pending investment of the proceeds of a placing or offer of Shares or where market or other factors so warrant, the Fund's assets may be held in money market instruments, including but not limited to certificates of deposit, floating rate notes and commercial paper listed or traded on Recognised Exchanges, and in cash deposits denominated in such currency or currencies as the Directors may determine having consulted with the Investment Manager.

The Fund is considered to be actively managed in reference to the Index by virtue of the fact that it seeks to outperform the Index and it uses the Index as a universe from which to select securities. The majority of the Fund's securities may be components of and may have similar weightings to the Index, however the Investment Manager will use its discretion to invest in securities or sectors not included in the Index in order to take advantage of investment opportunities. The investment strategy will restrict the extent to which the Fund's holdings may deviate from the Index which may be limited. This is likely to influence the extent to which the Fund can outperform the Index.

Investment Strategy

The Investment Manager believes that dividends and profits are highly correlated and that there is a rich source of alpha (risk-adjusted return in excess of the benchmark) in higher dividend paying companies that is broadly ignored by many investors. Part of this alpha source is the inefficiency with which the market continually under-prices the earnings potential of higher dividend paying companies while, at the same time, overpaying for growth. In pursuing the investment objective, the Investment Manager employs a systematic, disciplined methodology that builds on this theme by isolating small cap stocks in global developed markets with above average dividend yields and using their sustainability analysis to screen out those stocks that do not intentionally pay out high sustainable levels of dividend but may have a high yield due to price decline reasons. The Investment Manager then applies an asset allocation overlay that is broadly neutral on an industry group and region basis. This methodology is intended to prevent the portfolio from carrying too much exposure to those sectors characterized by high dividend paying companies (e.g. utilities, real estate companies and diversified financial companies such as brokers and asset management companies as well as stock exchange and consumer finance companies) and thus, avoids one of the drawbacks (i.e., overweighting in particular industries) of traditional high dividend funds.

Sustainable Finance

The Fund promotes environmental and social characteristics as the Investment Manager integrates environmental, social and governance (“ESG”) factors into its investment process.

In identifying investments which allow the Fund to promote environmental and social characteristics, the Investment Manager adopts the following strategies:

- The Investment Manager integrates an analysis of companies’ ESG performance into its investment analysis and investment decisions. Companies are rated on an AAA-CCC scale relative to the standards and performance of their industry peers, which is then translated into an ESG score. The Investment Manager gets a single ESG score for each stock from MSCI ESG Research (the “Data Provider”), each stock receiving a score of between 0 and 10, with the highest scoring company receiving a 10. The Investment Manager favours higher score stocks where possible and its aim is for the portfolio to have an equal or higher weighted ESG score than its comparable benchmark.
- The portfolio construction process employed by the Investment Manager excludes holdings deemed inconsistent with its Responsible Investment Guidelines or that are involved with certain controversial sectors, as determined by the Investment Manager’s Responsible Investment Committee. The Fund cannot invest in companies which are involved in certain activities including tobacco manufacturing, coal extraction and coal-fired electricity generation, in excess of certain thresholds. Full details of the exclusions and thresholds are available in the Responsible Investing Policy of the Investment Manager, which can be viewed on its website at www.kbiglobalinvestors.com.

- The Investment Manager monitors the carbon intensity of companies in which the Fund invests and aims to construct a portfolio whose carbon intensity is lower than the Index. Carbon intensity is a measure of greenhouse gas emissions, in tonnes, relative to the revenue of the company or portfolio. The Investment Manager obtains carbon intensity data from the Data Provider.

The Investment Manager also assesses the governance practices and governance performance of companies in which it invests. This assessment is based on specialised governance information and ratings from the Data Provider in order to satisfy itself that the relevant issuers follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

The Investment Manager monitors compliance with the social and/or environmental characteristics outlined above on a regular basis through the use of research and ratings from external data providers.

The Investment Manager monitors a range of sustainability indicators to measure the environmental and social characteristics outlined above, including:

- The weighted average ESG rating of the portfolio, as determined by the use of ESG ratings of companies, supplied by an external data provider of ESG research and ratings.
- The carbon intensity of the portfolio (see above for more information) measured by an external provider of carbon footprint measurement services.
- The percentage of board members of companies in which the fund invests which are female.

The Fund has designated the Index as a reference benchmark. The Index is not aligned with all of the environmental or social characteristics promoted by the Fund, as its methodology does not take account of environmental or social characteristics of companies when determining the inclusion of companies in the Index.

Efficient Portfolio Management and Financial Derivative Instruments

The Fund may employ (subject to the conditions and within the limits laid down by the Central Bank) techniques and instruments relating to transferable securities, comprising forward foreign exchange contracts, futures and swaps for efficient portfolio management purposes. The Fund may employ techniques and instruments intended to provide protection against exchange rate risks in the context of the management of its assets and liabilities.

Efficient portfolio management transactions referred to above may be entered into by the Investment Manager with one of the following aims a) a reduction of risk, or b) a reduction of cost with no increase or a minimal increase in risk.

The Fund may, subject to the conditions and limits laid down by the Central Bank, enter stocklending, repurchase agreements and reverse repurchase agreements for the purpose of

generating additional capital or income with no, or an acceptably low level of risk (relative to the expected return).

The Fund may, subject to the conditions and limits set out in the Central Bank UCITS Regulations, enter into futures contracts on equity securities and currencies. The Fund may use the foregoing techniques for efficient portfolio management and to hedge against changes in (i) exchange rates, (ii) securities prices.

Forward currency contracts may, subject to the conditions and limits laid down by the Central Bank, be used in order to hedge currency exposures of the Fund in accordance with the requirements of the Central Bank. Such currency exposure will arise where the assets in which the Fund invests are denominated in a different currency than the Base Currency of the Fund.

The Fund may enter into foreign exchange swap agreements with respect to currencies. The Fund may use these techniques to protect against changes in currency exchange rates.

In respect of currencies, the Fund may utilise foreign exchange swap contracts where the Fund may exchange currencies at a fixed rate of exchange for currencies at a floating rate of exchange or currencies at a floating rate of exchange for currencies at a fixed rate of exchange. These contracts allow the Fund to manage its exposures to currencies in which it holds investment. For these instruments the Fund's return is based on the movement of currency exchange rates relative to a fixed currency amount agreed by the parties.

The Fund's global exposure (as prescribed in the Central Bank UCITS Regulations) relating to financial derivative instruments shall not exceed 100% of the Net Asset Value of the Fund and will be measured using the commitment approach.

Shareholders should note that capital of the relevant Class may be eroded and income shall be achieved by foregoing the potential for future capital growth. Thus, on redemptions of holdings Shareholders of the relevant Class may not receive back the full amount invested. The policy of charging investment management fees and recurring expenses, or a portion thereof, to capital seeks to maximise distributions but it will also have the effect of lowering the capital value of your investment and constraining the potential for future capital growth.

In respect of all other Share Classes of the Fund, recurring expenses (excluding investment management fees) will be charged to capital in such manner as the Directors may from time to time decide. Shareholders of accumulating Share Classes should note that capital of the relevant Class may be temporarily eroded as a result of this charging method. Upon redemptions of holdings, Shareholders in accumulating Share Classes receive both capital and income, accordingly, while they may not receive back the full amount of capital invested, the overall redemption amount is unaffected. The policy of charging recurring expenses, or a portion thereof, to capital in respect of accumulating Share Classes will have the effect of temporarily increasing

the income element of your investment but it will also have the effect of lowering the capital value of your investment, until such time as income is capitalised (which is currently every six months).
