Background to the ICAV

Description

KBI Funds ICAV is an open-ended umbrella type Irish Collective Asset-management Vehicle (the "ICAV") with limited liability and segregated liability between Sub-Funds. The ICAV was established on 24 August 2016 having converted from company status by way of continuation in accordance with applicable law and the Central Bank requirements.

The ICAV was previously incorporated in Ireland on 10 September 2004 as a public limited company before the conversion into an Irish Collective Asset-management Vehicle and complied with the provisions in the Companies Act 2014 up until its conversion date. The ICAV is authorised by the Central Bank of Ireland (the "Central Bank") pursuant to the provisions of the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011, (S.I. 352 of 2011) (as amended) (the "UCITS Regulations") and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (the "Central Bank UCITS Regulations") and the Irish Collective Asset-management Act 2015 (the "ICAV Act").

The ICAV is structured as an umbrella Fund consisting of different Sub-Funds comprising one or more Classes. The Shares of each Class of a Sub-Fund will rank pari passu with each other in all respects provided that they may differ as to certain matters including currency of denomination, hedging strategies, if any, applied to the currency of a particular Class or against interest rate risk applying to a particular Class, dividend policy, the level of fees and expenses to be charged, subscription or redemption procedures or the Minimum Subscription and Minimum Holding applicable.

The assets of each Sub-Fund will be separate from one another and will be invested separately in accordance with the investment objective and policies of each Sub-Fund. A separate portfolio of assets is not maintained for each Class.

Overdrawn positions that exist in the Sub-Funds of the ICAV are as a result of transaction related activity and are not a result of a leverage strategy. While leverage is allowed as per the Prospectus, the longstanding policy of the Investment Manager is not to employ a leverage strategy on any of the Sub-Funds.

At the financial year ended 31 August 2024, there were sixteen Sub-Funds in existence:

| | Launch Date | Base Currency |
|--|-------------------|----------------------|
| KBI Global Energy Transition Fund | 10 April 2008 | EUR |
| KBI Water Fund | 10 April 2008 | USD |
| KBI Emerging Markets Equity Fund | 30 July 2010 | EUR |
| KBI Developed Equity Fund | 8 December 2010 | EUR |
| KBI Global Resource Solutions Fund | 3 July 2009 | EUR |
| KBI Global Equity Fund* | 14 March 2011 | EUR |
| KBI 50/50 Global/Eurozone Equity Fund** | 23 March 2011 | EUR |
| KBI Eurozone Equity Fund | 21 March 2011 | EUR |
| KBI North America Equity Fund | 23 October 2013 | USD |
| KBI ACWI Equity Fund*** | 17 April 2015 | EUR |
| KBI Integris Global Equity Fund | 30 November 2016 | EUR |
| KBI Global Sustainable Infrastructure Fund | 27 September 2017 | EUR |
| KBI Diversified Growth Fund | 26 November 2019 | EUR |
| KBI Global Small Cap Equity Fund | 29 July 2021 | EUR |
| KBI Circular Economy Fund | 19 September 2023 | EUR |
| KBI Eco Water Fund (ICAV)**** | 23 October 2019 | JPY |

^{*}Sub-Fund ceased trading on 21 November 2022.

^{**}Sub-Fund ceased trading on 11 November 2021.

^{***}Sub-Fund ceased trading on 11 May 2023.

^{****}These Annual Report and Audited Financial Statements are for all Sub-Funds of the ICAV excluding the KBI Eco Water Fund (ICAV) whose Financial Statements are prepared as a standalone basis for the financial reporting year ending 29 February 2024. All primary statements and related notes are for the other fifteen Sub-Funds listed only. The Financial Statements of the KBI Eco Water Fund (ICAV) are available from the Administrator on request.

Investment Objective and Policy

KBI Global Energy Transition Fund

The aim of the Sub-Fund is to achieve the highest possible return for its shareholders by investing primarily in shares of international companies involved in the energy transition sector.

The Sub-Fund will invest primarily in shares of companies trading on the recognised stock exchanges worldwide that in the opinion of the Investment Manager, on an aggregate portfolio basis, generate a substantial proportion of their turnover from and operate on a sustainable basis in the energy transition sector. The Sub-Fund will not invest more than 30% of net assets in emerging markets.

The Sub-Fund is considered to be actively managed in reference to the Wilderhill New Energy Global Innovation Index by virtue of the fact that it uses the Index for performance comparison purposes. However, the Index is not used to define the portfolio composition of the Sub-Fund or as a performance target and the Sub-Fund may be wholly invested in securities which are not constituents of the Index.

KBI Water Fund

The aim of the Sub-Fund is to generate the highest possible return for its shareholders by investing primarily in shares of international companies involved in the water sector.

The Sub-Fund will invest primarily in the shares of companies that are listed on recognised stock exchanges worldwide and which, in the opinion of the Investment Manager, on an aggregate portfolio basis, generate a substantial proportion of their turnover from and operate on a sustainable basis in the water solutions sector. The Sub-Fund will not invest more than 30% of net assets in emerging markets.

The Sub-Fund is considered to be actively managed in reference to the MSCI ACWI Index by virtue of the fact that it uses the Index for performance comparison purposes. However, the Index is not used to define the portfolio composition of the Sub-Fund or as a performance target and the Sub-Fund may be wholly invested in securities which are not constituents of the Index.

KBI Emerging Markets Equity Fund

The aim of the Sub-Fund is to achieve long-term growth by investing in shares of companies in global emerging markets that pay out a higher than average dividend. The Sub-Fund is measured against the MSCI Emerging Markets Index.

The Sub-Fund will invest primarily in shares of companies listed or trading on stock exchanges of emerging market countries and that pay out above average dividends.

The Sub-Fund is considered to be actively managed in reference to the MSCI Emerging Markets Index by virtue of the fact that it seeks to outperform the Index and it uses the Index as a universe from which to select securities. The majority of the Sub-Fund's securities may be components of and may have similar weightings to the Index, however, the Investment Manager will use its discretion to invest in securities or sectors not included in the Index in order to take advantage of investment opportunities. The investment strategy will restrict the extent to which the Sub-Fund's holdings may deviate from the Index which may be limited. This is likely to influence the extent to which the Sub-Fund can outperform the Index.

KBI Developed Equity Fund

The aim of the Sub-Fund is to achieve long-term capital growth by investing in the shares of companies with an above average dividend pay-out. The Sub-Fund is measured against the MSCI World Index.

The Sub-Fund will invest primarily in shares of companies listed or trading on the major worldwide stock exchanges and that pay out above average dividends.

The Sub-Fund is considered to be actively managed in reference to the MSCI World Index by virtue of the fact that it seeks to outperform the Index and it uses the Index as a universe from which to select securities. The majority of the Sub-Fund's securities may be components of and may have similar weightings to the Index, however, the Investment Manager will use its discretion to invest in securities or sectors not included in the Index in order to take advantage of investment opportunities. The investment strategy will restrict the extent to which the Sub-Fund's holdings may deviate from the Index which may be limited. This is likely to influence the extent to which the Sub-Fund can outperform the Index.

KBI Global Resource Solutions Fund

The aim of the Sub-Fund is to generate the highest possible return for its shareholders by investing in shares of international companies involved in environmental sectors.

Investment Objective and Policy (Continued)

KBI Global Resource Solutions Fund (Continued)

The Sub-Fund will invest primarily in the shares of companies that are listed on recognised stock exchanges worldwide and that operate in environmental sectors and which, in the opinion of the Investment Manager, on an aggregate portfolio basis, generate a substantial proportion of their turnover from and operate on a sustainable basis in the environmental sector by providing solutions to environmental challenges, including but not limited to, infrastructure and technological advancement of water, energy efficiency, energy transition, waste management and recycling, agribusiness and carbon trading.

The Sub-Fund is considered to be actively managed in reference to the S&P Global Natural Resources Index by virtue of the fact that it uses the Index for performance comparison purposes. However, the Index is not used to define the portfolio composition of the Sub-Fund or as a performance target and the Sub-Fund may be wholly invested in securities which are not constituents of the Index.

KBI Eurozone Equity Fund

The aim of the Sub-Fund is to achieve long-term growth by investing in the shares of companies in the Eurozone area that pay out a higher than average dividend. The Sub-Fund is measured against the MSCI EMU Index.

The Sub-Fund will invest primarily in shares of companies trading on stock exchanges of the Eurozone area and that pay out above average dividends.

The Sub-Fund is considered to be actively managed in reference to the MSCI EMU Index by virtue of the fact that it seeks to outperform the Index and it uses the Index as a universe from which to select securities. The majority of the Sub-Fund's securities may be components of and may have similar weightings to the Index, however, the Investment Manager will use its discretion to invest in securities or sectors not included in the Index in order to take advantage of investment opportunities. The investment strategy will restrict the extent to which the Sub-Fund's holdings may deviate from the Index which may be limited. This is likely to influence the extent to which the Sub-Fund can outperform the Index.

KBI North America Equity Fund

The aim of the Sub-Fund is to achieve long-term capital growth by investing in the shares of companies which offer a high dividend pay-out.

The Sub-Fund will invest primarily in shares of North American (U.S. and Canada) companies listed or trading on recognised exchanges worldwide.

The Sub-Fund is considered to be actively managed in reference to the MSCI North America Index by virtue of the fact that it seeks to outperform the Index and it uses the Index as a universe from which to select securities. The majority of the Sub-Fund's securities may be components of and may have similar weightings to the Index, however, the Investment Manager will use its discretion to invest in securities or sectors not included in the Index in order to take advantage of investment opportunities. The investment strategy will restrict the extent to which the Sub-Fund's holdings may deviate from the Index which may be limited. This is likely to influence the extent to which the Sub-Fund can outperform the Index.

KBI Integris Global Equity Fund

The aim of the Sub-Fund is to achieve long-term capital growth by investing in the shares of higher dividend paying companies in their regional industry group. The Sub-Fund is measured against the MSCI World Index.

The Sub-Fund will invest primarily in shares of companies listed or trading on the major worldwide stock exchanges. The Investment Manager integrates environmental, social and governance ("ESG") factors into its investment process and excludes holdings deemed inconsistent with its Responsible Investment guidelines. The ESG screening process is designed to exclude investment in certain controversial sectors as determined by the Investment Manager's Responsible Investment Committee. The Investment Manager's target is that the Sub-Fund's ESG score is higher than the benchmark.

The Sub-Fund is considered to be actively managed in reference to the MSCI World Index by virtue of the fact that it seeks to outperform the Index and it uses the Index as a universe from which to select securities. The majority of the Sub-Fund's securities may be components of and may have similar weightings to the Index, however, the Investment Manager will use its discretion to invest in securities or sectors not included in the Index in order to take advantage of investment opportunities. The investment strategy will restrict the extent to which the Sub-Fund's holdings may deviate from the Index which may be limited. This is likely to influence the extent to which the Sub-Fund can outperform the Index.

Investment Objective and Policy (Continued)

KBI Global Sustainable Infrastructure Fund

The aim of the Sub-Fund is to generate the highest possible return for its shareholders and outperform the S&P Global Infrastructure Index by investing primarily in shares of listed companies operating in infrastructure related sectors.

The Sub-Fund will invest primarily in shares of companies listed or traded on the major worldwide stock exchanges which generate on an aggregate portfolio basis a substantial portion of their turnover from the sustainable infrastructure sector, including but not limited to the supply or treatment of water, waste water and energy, the provision or maintenance or enhancement of energy or water infrastructure such as energy generation facilities and equipment or water treatment facilities, the provision, maintenance or enhancement of infrastructure designed to support the production and efficient distribution of food and crops and the provision, maintenance or enhancement of other socially beneficial infrastructure.

The Sub-Fund is considered to be actively managed in reference to the S&P Global Infrastructure Index by virtue of the fact that it uses the Index for performance comparison purposes. However, the Index is not used to define the portfolio composition of the Sub-Fund or as a performance target and the Sub-Fund may be wholly invested in securities which are not constituents of the Index.

KBI Diversified Growth Fund

The aim of the Sub-Fund is to provide steady long term capital growth.

The Sub-Fund is structured as a Fund of Funds and will invest in a combination of collective investment schemes, which are designed to provide exposure to various asset classes such as global equities and equity-related securities, global debt and debt-related securities, currencies and commodities.

The Sub-Fund is actively managed without reference to any benchmark meaning that the Investment Manager has full discretion over the composition of the Sub-Fund's portfolio, subject to the stated investment objectives and policies.

KBI Global Small Cap Equity Fund

The Sub-Fund's investment objective is to outperform the MSCI Global Small Cap Index and to achieve long-term growth by investing in a portfolio of small cap equity and equity-related securities of companies located in developed markets.

In pursuit of its investment objective, the Sub-Fund will invest primarily, either directly or indirectly (through investment in underlying collective investment schemes), in small cap equity and equity-related securities (including, but not limited to, warrants, convertibles, rights which are issued by a company to allow holders to subscribe for additional securities issued by that company, ADRs and GDRs) listed or traded on recognised Exchanges in developed markets.

The Sub-Fund is considered to be actively managed in reference to the Index by virtue of the fact that it seeks to outperform the Index and it uses the Index as a universe from which to select securities. The majority of the Sub-Fund's securities may be components of and may have similar weightings to the Index, however, the Investment Manager will use its discretion to invest in securities or sectors not included in the Index in order to take advantage of investment opportunities. The investment strategy will restrict the extent to which the Sub-Fund's holdings may deviate from the Index which may be limited. This is likely to influence the extent to which the Sub-Fund can outperform the Index.

KBI Circular Economy Fund (launched on 19 September 2023)

The Sub-Fund's investment objective is to generate the highest possible return for its shareholders by investing in a portfolio of equity and equity-related securities of companies, which in the opinion of the Investment Manager, advance the Circular Economy.

In pursuit of its investment objective, the Sub-Fund will invest primarily, either directly or indirectly (through investment in underlying collective investment schemes), in equity and equity-related securities (including, but not limited to, warrants, rights which are issued by a company to allow holders to subscribe for additional securities issued by that company, ADRs and GDRs) of companies listed or traded on Recognised Exchanges worldwide which, in the opinion of the Investment Manager, on an aggregate portfolio basis generate a substantial proportion of their turnover from advancing the Circular Economy.

Investment Objective and Policy (Continued)

Net Asset Value

The Net Asset Value of each Sub-Fund or, if there are different Classes within a Sub-Fund, each Class will be calculated by the Administrator as at the Valuation Point on or with respect to each Dealing Day in accordance with the instrument. The Net Asset Value of a Sub-Fund shall be determined as at the Valuation Point for the relevant Dealing Day by valuing the assets of the relevant Sub-Fund (including income accrued but not collected) and deducting the liabilities of the relevant Sub-Fund (including a provision for duties and charges, accrued expenses and fees and other liabilities). The Net Asset Value of a Sub-Fund will be expressed in the Base Currency of the Fund or in such other currency as the Directors may determine either generally or in relation to a particular Class or in a specific case.

Dealing Day means every Business Day or such other day or days as may be determined by the Directors and notified in advance to Shareholders provided that there shall be at least two Dealing Days in each month.

For KBI Global Energy Transition Fund, KBI Water Fund, KBI Developed Equity Fund, KBI Global Resource Solutions Fund, KBI North America Equity Fund, KBI Integris Global Equity Fund, KBI Global Sustainable Infrastructure Fund, KBI Global Small Cap Equity Fund and KBI Circular Economy Fund, Business Day means every day, other than a Saturday or Sunday, which are bank business days in Ireland and New York and in such other market or markets to which the Sub-Fund has, in the reasonable opinion of the Investment Manager, a substantial exposure or such other day or days as the Directors may determine and notify in advance to Shareholders.

For KBI Emerging Markets Equity Fund, KBI Eurozone Equity Fund and KBI Diversified Growth Fund, Business Day means every day, other than a Saturday or Sunday, which are bank business days in Ireland and in such other market or markets to which the Sub-Fund has, in the reasonable opinion of the Investment Manager, a substantial exposure or such other day or days as the Directors may determine and notify in advance to Shareholders.

Investment Manager's Report

KBI Global Energy Transition Fund

The KBI Global Energy Transition Fund (the "Sub-Fund") increased by 2.0% during the 12 months to end August 2024, while the Wilderhill New Energy Global Innovation Index decreased by 21.5% and MSCI ACWI gained by 21.0% (in EUR terms). The Sub-Fund decreased by 6.1% during the 12 months to end August 2023, outperforming the Wilderhill New Energy Global Innovation Index which decreased by 28.2% (in EUR terms). The Sub-Fund was in compliance with the strategy and objectives as set out in the prospectus.

Whilst volatile, the 12 month period was a period of strength for global equity markets. Initially stickier than expected inflation and continued economic strength in the US suggested that the pace of interest rate decreases could be slower and later, than many investors had expected. In this context communication services and IT were the best performing sectors in a narrow market while the weakest areas of the market were interest rate sensitive sectors (real estate and utilities). In this environment, the strategy struggled relative to the broad market due to the higher weight in utilities and the underperformance of yield sensitive sectors among renewable energy (US residential solar). However, in the last few months of the period, there was a shift in tone with easing inflation, economic data beginning to show initial signs of weakness in the US leading the market to price in a few interest rate cuts. The strategy strongly outperformed its thematic benchmark in the period due to its more balanced exposure – less small cap, less renewable energy exposure and strong stock selection.

All three segments underperformed the broad market in the period, but the utilities segment was the best performing of the three due to a recovery in the second half of the period. Initially, the utilities segment was under pressure due to the sustained higher interest rate environment while declining power prices in Europe weighed on European clean energy utilities. However, the segment bounced back, buoyed by expectations of interest rate cuts, an upward movement in European forward power prices off their lows, resilient earnings and increased recognition of utilities' role in supporting increased load demand from datacentre growth. Performance was also helped by two holdings being acquired. The independent German wind and solar producer Encavis was acquired by a private infrastructure group followed by the acquisition of Atlantica Infrastructure by a private equity firm. These takeovers at attractive multiples helped to highlight the strategic value of renewable generation assets.

The energy efficiency segment was the weakest of the three segments overall, although there was a wide range of returns. Among the top contributors by stock were semiconductor and technology stocks (ASML, Analog Devices) due to optimism around AI (Artificial Intelligence) and a recovery in the semiconductor cycle. Smart metering leader Itron, rallied on positive results due to improvement in supply chain issues and industrials (ABB, Eaton) rallied on strong secular growth trends in electrification and grid infrastructure. Newly added positions in Nexans (leading cable manufacturer) and Schneider (electrical/digital infrastructure) were also among the top contributors. On the other hand, the negative contributors were mostly EV (Electric Vehicle) related as lower demand growth than expected and EV manufacturers pushing out production schedules led to underperformance of EV related stocks. This impacted various players across the value chain, with battery manufacturers (Samsung SDI), lithium producers (Albemarle, Arcadium) and technology providers (Wolfspeed, Aptiv) among the top negative contributors.

The renewable energy segment was a slight positive contributor to performance and delivered positive stock selection relative to the thematic benchmark. It was a difficult year for the solar market impacted by easing demand in Europe and the US, the higher rate environment and policy uncertainty in the US due to the upcoming election. Despite this First Solar was the top contributor overall. Shares rallied due to its domestic manufacturing status, policy hampering imports of modules into the US, strong order book and increasing rhetoric around AI's increasing need for utility scale clean energy. The US solar residential installer Sunnova was a detractor, given fears that higher for longer interest rates could impact its growth plans while solar equipment companies for utility scale projects were hit by project pushouts. The invertor companies were negatively impacted by elevated inventories. Within wind, there was more positive sentiment towards offshore wind players in the latter half of the period due to increased auction activity with improved prices. Improving fundamentals in the onshore wind market, including positive order momentum and strong pricing, led to a strong performance from the wind turbine manufacturer Nordex although its peer Vestas continued to underperform due to an overhang from the upcoming US election. Interest rate sensitive renewable energy companies rallied towards the end of the period.

Investment Outlook

With the world's major economies committed to achieving net-zero emissions in the long-term, we believe we are in the early stages of a multi-decade energy transition. The need to decarbonise global economies will lead to substantial investment and growth opportunities for our companies who provide solutions for decarbonisation across many end markets. We believe the energy transition will remain on track despite the prospect of the global economy slowing, helped by several tailwinds: increasing global renewable energy capacity, energy resilience, grid investments, US manufacturing re-shoring, increased load growth from datacentres and US Federal government stimulus spending.

KBI Global Energy Transition Fund (Continued)

Investment Outlook (Continued)

We have increased exposure to companies offering both hardware and software solutions in areas from grid automation, metering, data centre infrastructure, electrical components to cabling. We have also increased exposure to semiconductor companies, as industry trends are pointing to an inflection in the capex cycle. Within the electric vehicle end market, we continue to favour technology and components suppliers leveraged to healthier growth in Europe and China. We have added exposure to the energy storage market which continues to be buoyant preferring early movers with grid connections benefiting from strong demand.

Within renewables, there are signs that we are approaching the end of some fundamental headwinds across wind and solar. In wind, positive order momentum in onshore, record day rates for offshore installation vessels and upcoming offshore wind auctions will provide further catalysts for the sector. We believe the solar sector will benefit from an expected lower rate environment, especially the residential solar installers and we also favour companies with domestic manufacturing who are better placed to benefit from trade policy. Political uncertainty in the US election may be an overhang in the near-term, we would argue that many of the key beneficiaries of stimulus and policy support are trading at levels lower than when the positive announcements were made and the medium to long-term trends remain very supportive.

We continue to be constructive on the Utilities segment, which is trading on attractive valuation multiples, while offering resilient earnings growth. We believe clean energy utilities remain supported by long term structural demand; rising demand for electricity because of greater demand from transport (EVs), heating (heat pumps) and cloud computing (as evidenced by many announcements from holdings). Furthermore, the segment will offer defensive characteristics in a more uncertain macro environment.

KBI Global Investors Ltd

KBI Water Fund

The KBI Water Fund (the "Sub-Fund") increased by 21.6% for the 12 months to end August 2024, underperforming the MSCI ACWI Index, which increased by 23.4% (in USD terms). The Sub-Fund increased by 15.9% for the 12 months to end August 2023, outperforming the MSCI ACWI Index, which increased by 14.0% (in USD terms). The Sub-Fund was in compliance with the strategy and objectives as set out in the prospectus.

The last year in the market can be characterized by periods of narrow market breadth, which has led to the technology sector performing well ahead of the market, driven by megacap stocks, particularly those with leading positions in Artificial Intelligence (AI). Sectors more closely tied to the health of the global consumer—directly or indirectly—struggled, with energy, materials, consumer discretionary, and consumer staples being the worst performers over the last year. Utilities and industrial sectors' performance were similar, and only modestly behind the MSCI AC World Index. The stock selection effect was the primary driver of performance, in which the Fund's industrial stocks performed better than the broader industrials sector, driven by stocks exposed to housing and utility spending markets. This was more than offset by underperformance of the Fund's utilities relative to the broader utilities sector as UK water utilities have been in a period of regulatory uncertainty and water utilities in general have lagged power utilities which are benefiting from their exposure to data center enabled growth vectors.

The water technology segment was the best performing segment in the period, driven by strong earnings growth as the companies addressed the needs of their municipal and industrial client's water challenges. Also, supply chain improvements allowed the metering companies to accelerate their product orders that had accumulated in their backlogs in the prior years due to constraints on fulfilling the strong demand. Water infrastructure was the next best performing segment, mostly helped by engineering and construction demand for utilities and governments as they addressed infrastructure resiliency and growth needs. Water utilities lagged the other segments due to weakness in the Chinese utilities and only modest returns of the US and UK regulated utilities which have had heightened regulatory uncertainty in the period. The top contributors in the period were Xylem which benefitted from metering dynamics mentioned above, Core & Main which is a waterworks distributor supplying water products to utilities, and Coway which rents point-of-use water treatment technology to consumers and has seen its earnings accelerate in the period. The main detractors were Orbia which has had earnings degradation within several of its more commodity-related business lines, Pennon Group which had to delay its stormwater environmental targets given the above average rainfall, and Guangdong Investment which has had several property-related write-downs leading to a dividend cut.

Investment Outlook

The KBI water strategy remains balanced and well diversified both from an end market and geographic perspective. We are comfortable with our exposures and the potential earnings risk in the portfolio, given the potential for economic weakness over the coming year. Earnings believability is something we are very focused on, and we have a preference for companies where we feel demand may prove more resilient, either due to their exposure to Infrastructure stimulus spending in the US, large backlogs, or due to their break-and-fix orientation. We also like companies that we would expect to be beneficiaries of peaking inflation and improvements in supply chains.

We also have a preference for more defensive-type business models like regulated utilities, which tend to be monopolies, or non-regulated utilities like Veolia that operate long term concession type agreements. Companies that we own in the technology space tend to be high quality with a high percentage of their revenues coming from recurring revenue activities and strong balance sheets. Our exposure to more cyclical end markets like industrial is low and we have been diligent about diversifying our exposure to private construction markets, doing this by owning a number of different market leading, high-quality names that tend to be more repair and replacement oriented as opposed to new build, with strong balance sheets, and in some cases offsetting growth drivers. We remain focused on earnings risk and downside protection as we opportunistically take advantage of the recent market volatility. We expect the long-term superior earnings growth experienced by the water strategy to continue, with our expectations for earnings growth in 2024 currently ahead of the market. The strategy remains attractively valued with room for its historic premium to be regained.

KBI Global Investors Ltd

KBI Emerging Markets Equity Fund

The KBI Emerging Markets Equity Fund (the "Sub-Fund") registered a rise of 12.5% during the 12 months to end August 2024, underperforming the MSCI Emerging Markets Index which increased by 12.8% (in EUR terms). The Sub-Fund registered a decline of 5.1% during the 12 months to end August 2023 against a decline of 6.2% in the MSCI Emerging Markets Index (in EUR terms). The Sub-Fund was in compliance with the strategy and objectives as set out in the prospectus.

Global stock markets rallied strongly over the year. The positive tailwinds of improving inflation data, easing interest rate expectations, and generally stronger earnings releases propelled stock prices higher.

Fundamentally, investors were cheered by the growing likelihood that the recent tightening cycle has ended without causing much economic or corporate difficulty. With the easing cycle now underway in many countries, and the Federal Reserve almost certain to follow shortly, the debate has now moved to the pace rather than the fact of rate cuts. Notably, this benign macro and policy backdrop was more than sufficient to outweigh continuing geopolitical concerns in the Middle East and elsewhere.

While emerging markets lagged their developed world counterparts, they also made strong absolute gains. Taiwan and Korea benefited from the renewed surge in Artificial Intelligence (AI) related semiconductor stocks while India continues to rally. China remains stuck as policymakers appear reluctant to introduce new policy supports while recent yen volatility has put the yuan back in the spotlight. The economic data releases have been disappointing, and several commentators are highlighting the risk of a self-fulfilling downward shift in the domestic economy.

Value outperformed growth during the year under review thanks to solid performance in Asia and especially in Latin America whereas growth outperformed in EMEA (Europe, Middle East and Africa). High yield outperformed led by strong performance in Asia and EMEA although it underperformed in Latin America. Economically sensitive small cap stocks were the best performers on a relative basis as mid cap stocks struggled.

Stock selection detracted from performance in semiconductors, media and entertainment and in consumer services. In semiconductors, Global Unichip underperformed as quarterly results were in line with expectations but management revised down FY24 (Financial Year 2024) revenue growth to flat year on year (from up 7-9% prior) due to further order cuts for non-Artificial Intelligence projects and a slower production ramp for Generation -1 of datacentre ASIC (Application Specific Integrated Circuits) projects for Microsoft. The technology will migrate to more advanced nodes and better scale would lead to more earnings upside into next year while structural opportunities in ASIC and High Bandwidth Memory remain solid. In media and entertainment, NetEase was under pressure as the company unveiled weaker deferred revenue in Q2 (Quarter 2) which made investors cautious on H224 (Second Half 2024) game revenue growth. The stock is trading at a 5-year low Price Earnings valuation of 11 times, suggesting that the weak revenue growth outlook is in the price. NetEase will have a series of new game launches in Q4 and in the meantime will increase shareholder return via buybacks and dividends. In consumer services, Yum China underperformed as same store sales growth (SSSG) remained under pressure in Q2 though recent months appear to show some sequential improvement. There is rising promotional intensity and the company has introduced various cost cutting initiatives at both stores and headquarters and this should help to underpin overall margins. With negative SSSG most leading retailers are forced to add new units resulting in intensifying competition and lower sector margins while there has been a slowdown in overall consumer spending due to the softening macro, deteriorating unemployment and fragile consumer confidence (despite the rising savings rate).

Stock selection contributed positively to performance in banks, automobiles and in consumer durable and apparel. In banks, KB Financial outperformed driven by robust expectation of an improvement in shareholder return due to the Korean government's value up programme. KB has a Core Equity Tier 1 ratio of 13.6%, higher than the target of 13% so there is further upside on the total payout ratio including both dividend and share cancellation. KB could increase its total payout ratio to 50% by 2026 if average risk weighted asset growth remains below 5% year on year. In automobiles, Hero MotoCorp rallied as it pursues a marked shift in its strategy from defence to offence – be it product, distribution or focused growth push. The company has expanded its premium portfolio with two new launches (Maverick 440cc, Sporty 125cc bike Xtreme) and next in line is the E-scooters scale up in FY25 (Financial Year 2025) with new launches planned in the mid to affordable segment. In distribution, a large revamp is underway with upgraded Hero 2.0 stores (c 300), exclusive premia outlets and digitalisation. Hero also plans to use its strong balance sheet to invest for growth in premium and electric as the portfolio is now coming together fully while the financing environment has become more benign with penetration increasing to 60-65% now and the financing costs have also come down. In consumer durable and apparel, Nien Made outperformed as Q2 gross margin reached a record high of 58.3% (consensus expectation 55.6%) thanks to higher custom-made window covering exposure, lower input costs and efficiency improvements in the Mexico factory. The US implemented new safety guidelines on window covering products in June, banning the use of free hanging cords. Nien Made had voluntarily discontinued the sale of such products before the regulations were enforced and the early adoption of higher safety standards will help Nien Made to gain market share in the coming quarters as competitors face risks associated with capacity switching.

KBI Emerging Markets Equity Fund (Continued)

Investment Outlook

Politics will play a vital role in the coming months with the US presidential election too tight to call. The introduction of additional tariffs will put further pressure on China while the inability to access leading AI technology will inhibit future growth. The region should benefit from an easing in US monetary policy enabling local central banks to reduce interest rates and to pump liquidity into the system, although policy and election uncertainty are likely to remain high.

KBI Global Investors Ltd

KBI Developed Equity Fund

The KBI Developed Equity Fund (the "Sub-Fund") registered a rise of 15.3% during the 12 months to end August 2024, underperforming the MSCI World Index, which recorded a rise of 22.0% (in EUR terms). The Sub-Fund registered a rise of 6.7% during the 12 months to end August 2023 underperforming the MSCI World Index which rose by 7.1% (in EUR terms). The Sub-Fund was in compliance with the strategy and objectives as set out in the prospectus.

Global stock markets rallied strongly over the year. The positive tailwinds of improving inflation data, easing interest rate expectations, and generally stronger earnings releases propelled stock prices higher.

Fundamentally, investors were cheered by the growing likelihood that the recent tightening cycle has ended without causing much economic or corporate difficulty. With the easing cycle now underway in many countries, and the Federal Reserve almost certain to follow shortly, the debate has now moved to the pace rather than the fact of rate cuts. Notably, this benign macro and policy backdrop was more than sufficient to outweigh continuing geopolitical concerns in the Middle East and elsewhere.

Growth outperformed value thanks to strong relative performance in North America as large cap technology names were boosted by continued investor interest in Artificial Intelligence (AI) although value did outperform growth in Europe and Japan. High yield underperformed driven by weak performance in North America and in the rest of the world although it did outperform in Europe and Japan. Large cap stocks were the best performers on a relative basis driven by the strong rally in heavily weighted technology names while economically sensitive small cap stocks struggled.

Stock selection was disappointing in semiconductors, media and entertainment and in pharmaceuticals. In semiconductors, we have no exposure to Nvidia which was up sharply during the year under review. Investors believe that generative Artificial Intelligence deployments are still in the first phase of a three to four year investment cycle as AI deployment remains a mission critical requirement for global cloud/enterprise customers and Nvidia provides the best turnkey model. Microchip struggled as ongoing inventory digestion impacted all end markets led by auto/industrial which accounts for 61% of sales with the US and Europe remaining sluggish due to destocking and lower target inventory levels. However, Microchip continues to generate strong free cash flow and has been tactically under shipping true demand, setting the stage for a sustained recovery. In media and entertainment, Interpublic underperformed as it reduced its growth outlook due to greater caution around the macro and consumer backdrop. Management are working hard to reaccelerate organic growth by investing in principal media, retail media, production and generative AI while they are also intending to sell underperforming digital agencies and these initiatives should bear fruit in the coming years. We have no exposure to Meta which performed strongly during the year under review with the company announcing robust results driven by better than expected advertising growth and cost control. Meta has emphasised the role of AI including advanced AI products for users, creators and businesses, custom in-house AI chips and a new category of personal computing devices that allow interaction with AI however this will require significant capital investment in the coming years hampering free cash flow generation. In pharmaceuticals, Pfizer underperformed even though oncology products such as Adcetris and Padcev delivered compelling growth that was suggestive of continued momentum as investor concerns remain over the breast cancer and prostate cancer programmes that are seen as high risk with clinical/commercial challenges. The valuation is attractive and stronger launch performance and/or further progress on the pipeline would drive a re-rating of the stock.

Relative stock selection contributed positively to performance in consumer discretionary, insurance and technology hardware. In consumer discretionary, Dick's Sporting Goods outperformed with the company benefiting from strong comparable sales driven by 1) accelerating market share gains 2) dominance as the largest national sporting goods brand in the US 3) superior access to the best and most innovative brands and products and 4) a revamped product and category mix that supports permanent structural margin gains in the business. After a 5-year period of roughly flat new store growth the company is embarking on a period of re-acceleration of square footage growth and will introduce 75 to 100 House of Sports stores by 2027 while 16 next generation Dick's stores are planned for 2024 alone. House of Sports economics suggest strong productivity in line with the legacy store base despite much bigger stores (120K sq. ft. versus legacy 40K sq. ft). In insurance, Manulife outperformed as it announced that its insurance unit had raised its core Return on Equity (ROE) target to at least 18% by 2027 up from the current target of 15%. It also increased the target for cash generated by its subsidiaries that is passed along to the parent company to \$22bn for the next three years from \$18.4bn in the past three years. The higher targets came after the company went through a significant transformation where it has off-loaded risk and is now well placed to capitalise on global trends. It has been shedding assets with low Return On Equity particularly in its long-term care coverage. In December 2023, it announced a \$13bn reinsurance deal which included the largest long-term care component in the insurance industry and in March announced a deal to reinsure \$5.8bn of universal life reserves. Manulife is now focusing on high return potential growth markets, especially in Asia. In technology hardware, NetApp outperformed after it unveiled its three-year financial model which was better than expected. The company expects to deliver mid to upper single digit revenue growth (above consensus 4-5%) on above market growth and share gains, operating margins in excess of 30% (consensus 27%) on mix/operating expense discipline, double digit earnings per share growth (6-7% consensus) on operating leverage and a 20% plus free cash flow margin.

KBI Developed Equity Fund (Continued)

Investment Outlook

Investing for income is probably as old as investing itself. The need for stock to produce flow is likely timeless. That said, dividend investing has had a hard time recently. The lure of growth at seemingly any price has dominated. In such times it is important to remember that the total return from investing in a stock is the sum of three components: dividend yield + dividend growth + change in valuation.

While the dominant driver of stock market returns over shorter time periods is the change in valuation, or what may better be understood as the mood of Mr. Market, the dominant driver over the longer-term is the combination of dividend yield and dividend growth.

Importantly, many stocks in recent times have been wholly dependent on the positive mood of Mr. Market to deliver positive returns to investors. Their earnings growth has been exceeded by a marked rise in valuation to deliver a positive outcome. This is not sustainable, and over the longer-term, the combination of dividend yield and dividend growth will again be necessary to drive positive returns. Unsurprisingly, this is largely due to the re-rating of information technology stocks, where the share price gains have far outstripped their expected earnings, and these stocks now trade at an historic premium.

Fortunately, a large diversity of businesses are dividend payers and many of these are enjoying profit growth greater than the opportunities to re-invest profitably. Moreover, having been broadly overlooked in recent years, these businesses are currently on offer at attractive valuations. The likelihood of a major rotation towards such companies is growing.

KBI Global Investors Ltd

KBI Global Resource Solutions Fund

The KBI Global Resource Solutions Fund (the "Sub-Fund") increased 7.7% during the 12 months to end August 2024, outperforming the S&P Global Natural Resources Index which increased 2.3%. The Sub-Fund underperformed the MSCI AC World Index, which increased by 21.0% in the period (all in EUR terms). The Sub-Fund declined 2.4% during the 12 months to end August 2023, underperforming the S&P Global Natural Resources Index which declined 0.4% and underperforming the MSCI AC World Index which increased by 5.6% in the period (all in EUR terms). The Sub-Fund was in compliance with the strategy and objectives as set out in the prospectus.

The last year in the market can be characterized by periods of narrow market breadth, which has led to the technology sector performing well ahead of the market, driven by megacap stocks, particularly those with leading positions in Artificial Intelligence (AI). Sectors more closely tied to the health of the global consumer—directly or indirectly—struggled, with energy, materials, consumer discretionary, and consumer staples being the worst performers over the last year. Utilities and industrial sectors' performance were similar, and only modestly behind the MSCI AC World Index. While sector exposures explain the outperformance versus the energy and materials heavy S&P Global Natural Resources Index, the underperformance versus the MSCI AC World Index is more related to the stock selection effect.

The performance dispersion of the three resources was wide over the last year, with water performing well ahead of energy transition, which itself was well ahead of agribusiness. Water technology and water infrastructure were the two best performing segments, driven mostly by strong government and utility spending end markets. Energy transition benefitted from utility spend too, as well as the electrical infrastructure needed to serve the growing data center markets. This was offset by weakness in electric vehicle (EV) markets. The agribusiness segments struggled over the last year with the continued downward reset of expectations on the other side of the ag cycle peak, and even though fertilizer prices have been mostly stable in the period, crop prices have declined to low levels on strong harvests which is pressuring farmer incomes.

Making the water infrastructure and electrical grid resilient in the face of growth, climate change, and swings of intermittent supply and demand challenges has driven governments and corporations to invest in solutions. Infrastructure stimulus funds are in the early phases of being rolled out globally, particularly in the US. The solar and wind industries look like they have mostly sorted out issues of supply chain and inflation-related dislocations they have experienced over the last few years. While there has been some indigestion post-ag cycle peak, the agribusiness markets are mostly stabilizing and company-specific drivers are becoming increasingly important drivers to stock performance.

Top contributors over the period include Xylem and Itron which are both benefitting from supply chain improvements enabling them to work down their large orderbooks in water and electricity meters, as well as DSM Firminich which is benefitting from post-merger synergies and other portfolio reshaping. Detractors in the period include two stocks with ties to the EV market, battery maker Samsung SDI and lithium producer Arcadium Lithium.

Investment Outlook

The Sub-Fund invests in the key resources of water, food and energy. These resources are critical to how we live and there are no substitutes. The Sub-Fund invests in companies that provide solutions to the problem of growing supply-demand imbalances across these scarce and essential resources, which are driven by a combination of significant demographic changes and significant supply constraints as well as significant policy support to address a future world. We believe this is an attractive source of growth that underpins the investment thesis for the Sub-Fund.

KBI Global Investors Ltd

KBI Eurozone Equity Fund

The KBI Eurozone Equity Fund (the "Sub-Fund") registered a rise of 11.2% during the 12 months to end August 2024, underperforming the MSCI EMU Index, which recorded a rise of 15.3%. The Sub-Fund registered a rise of 24.4% during the 12 months to end August 2023 outperforming the MSCI EMU Index which rose by 20.3% (in EUR terms). The Sub-Fund was in compliance with the strategy and objectives as set out in the prospectus.

Global stock markets rallied strongly over the year. The positive tailwinds of improving inflation data, easing interest rate expectations, and generally stronger earnings releases propelled stock prices higher.

Fundamentally, investors were cheered by the growing likelihood that the recent tightening cycle has ended without causing much economic or corporate difficulty. With the easing cycle now underway in the Eurozone, and the Federal Reserve almost certain to follow shortly, the debate has now moved to the pace rather than the fact of rate cuts. Notably, this benign macro and policy backdrop was more than sufficient to outweigh continuing geopolitical concerns in the Middle East and elsewhere.

Value marginally outperformed growth as financials benefited from a relatively benign credit quality environment and an improvement in net interest margins. On the other hand, high yield struggled given the underweight position in the strongly performing information technology sector while economically sensitive small cap companies struggled on a relative basis.

Stock selection was disappointing in consumer durable and apparel, software and services and in commercial and professional services. In consumer durable & apparel, Kering underperformed during the year under review. The company reported in-line first half results with no sequential improvement in Q2 (Quarter 2) compared to Q1 (Quarter 1) on weakness in Gucci and Asia Pacific and flagged a further deterioration in the exit rates in June, and an expected 30% year on year decline in recurring Earnings Before Interest and Tax in the second half. Regional performance in the first half largely reflected constant trends in the two quarters with outperformance in Japan supported by tourist spending on a weak yen while Western Europe and North America were weak on local demand and declining tourist flows from Asia. In software and services, Bechtle underperformed even though it guided to the usual 5%-10% top line growth coupled with a flat margin. The economic environment remained challenging especially in the first half although the company expects a gradual improvement through the remainder of the year. Free cash flow (FCF) generation was very strong with an improvement in inventories and in days sales outstanding. We have no exposure to SAP which was up strongly as investors believe that Artificial Intelligence (AI) should emerge as a meaningful revenue contributor in the medium-term with SAP ideally positioned to help its customers leverage AI to improve internal processes. The recently announced restructuring should also lead to a step change in profitability in 2025 with further upside in FCF conversion. In commercial and professional services, Randstad struggled as gross profit remained under pressure due to an unfavourable geographic and business mix with still elevated sickness affecting its Temporary business in Northern Europe. While Spain, Italy and Japan are performing well, North America, Germany and France remain weak. The first few weeks of July saw stable volumes as compared to Q2 and Randstad expects to benefit from easier comparisons in Q3 (Quarter 3) while gross margins should also trend higher.

Relative stock selection contributed positively to performance in banks, insurance and in consumer discretionary. In banks, BBVA outperformed as Spain performed better than expected with loan growth showing signs of recovery and deposit margins remained strong. Mexico performed broadly in line and BBVA feels that its value proposition in the country will be difficult to replicate. Visibility in Turkey is not great but BBVA is confident that it can deliver on FY24 (Financial Year 2024) guidance in the country. The bank believes that it can run with a 11.5%-12% Core Equity Tier 1 ratio and remains focused on organic growth opportunities. In insurance, AXA performed strongly with the stock price boosted by the release of better-than-expected results. First half results showed a solid operating trend particularly in Property & Casualty (P&C) personal lines and UK health where the recovery is well on track. Management is confident of achieving underlying earnings per share growth in 2024, in-line with the 6%-8% Compound Annual Growth Rate target range over the 2023-2026 plan, with improving margins in personal lines P&C and recovery in the UK technical margin continuing in the second half. In consumer discretionary, Inditex reported solid sales growth demonstrating continued momentum with its fashion proposition resonating well amidst softer demand in challenging weather. Store sales density up 23% versus 2019 and FY (Full Year) online sales +16% point to the effectiveness of Inditex's omnichannel model. The company announced ordinary capital expenditure of €1.8bn which will be spent on store openings/enlargements, logistics infrastructure and omnichannel integration/enhancing the online platform thus helping to widen Inditex's competitive advantage versus peers.

Moreover, having been broadly overlooked in recent years, these businesses are currently on offer at attractive valuations. The likelihood of a major rotation towards such companies is growing.

KBI Global Investors Ltd

KBI Integris Global Equity Fund

The KBI Integris Global Equity Fund (the "Sub-Fund") registered a rise of 18.4% during the 12 months to end August 2024, underperforming the MSCI World Index, which increased by 22.0% (in EUR terms). The Sub-Fund registered a rise of 5.0% during the 12 months to end August 2023 underperforming the MSCI World Index (in EUR terms) which increased by 7.1%. The Sub-Fund was in compliance with the strategy and objectives as set out in the prospectus.

Global stock markets rallied strongly over the year. The positive tailwinds of improving inflation data, easing interest rate expectations, and generally stronger earnings releases propelled stock prices higher.

Fundamentally, investors were cheered by the growing likelihood that the recent tightening cycle has ended without causing much economic or corporate difficulty. With the easing cycle now underway in many countries, and the Federal Reserve almost certain to follow shortly, the debate has now moved to the pace rather than the fact of rate cuts. Notably, this benign macro and policy backdrop was more than sufficient to outweigh continuing geopolitical concerns in the Middle East and elsewhere.

Growth outperformed value thanks to strong relative performance in North America as large cap technology names were boosted by continued investor interest in Artificial Intelligence (AI) although value did outperform growth in Europe and Japan. High yield underperformed driven by weak performance in North America and in the rest of the world although it did outperform in Europe and Japan. Large cap stocks were the best performers on a relative basis driven by the strong rally in heavily weighted technology names while economically sensitive small cap stocks struggled.

Stock selection was disappointing in semiconductors, media and entertainment and in transportation. In semiconductors, we have no exposure to Nvidia which was up sharply over the year. Investors believe that generative Artificial Intelligence deployments are still in the first phase of a three-to-four-year investment cycle as AI deployment remains a mission critical requirement for global cloud/enterprise customers and Nvidia provides the best turnkey model. Microchip struggled as ongoing inventory digestion impacted all end markets led by auto/industrial which accounts for 61% of sales with the US and Europe remaining sluggish due to destocking and lower target inventory levels. However, Microchip continues to generate strong free cash flow and has been tactically under shipping true demand, setting the stage for a sustained recovery. In media and entertainment, Interpublic underperformed as it reduced its growth outlook due to greater caution around the macro and consumer backdrop. Management are working hard to reaccelerate organic growth by investing in principal media, retail media, production and generative AI while they are also intending to sell underperforming digital agencies and these initiatives should bear fruit in the coming years. We have no exposure to Meta which performed strongly during the year under review with the company announcing robust results driven by better-than-expected advertising growth and cost control. Meta has emphasised the role of AI including advanced AI products for users, creators and businesses, custom in-house AI chips and a new category of personal computing devices that allow interaction with AI however this will require significant capital investment in the coming years hampering free cash flow generation. In transportation, United Parcel Service (UPS) was under pressure following disappointing quarterly results and lowered 2024 guidance as investors were concerned that the company had implemented a volume over price strategy which drove a significant amount of negative mix during the quarter when volumes from ecommerce players such as Temu soared. However, UPS intends to address this imbalance with dynamic pricing which is part of these new contracts as well as the recently announced residential peak/demand surcharges.

Relative stock selection contributed positively to performance in consumer durable and apparel, consumer discretionary and in technology hardware. In consumer durable and apparel, Lennar outperformed after management gave additional details on their asset light approach. Lennar aims to sustainably increase its return on equity through an aggressive land-light shift that will drive consistently higher free cash flow conversion leading to an eventual significant increase in returns to shareholders and the removal of land off the balance sheet. Lennar also discussed their robust pricing analytics that rely heavily on real time data from its various markets and communities. The company is ahead of peers in its data driven approach and this allows for more dynamic pricing which helps to support their volume model. In consumer discretionary, Dick's Sporting Goods outperformed with the company benefiting from strong comparable sales driven by 1) accelerating market share gains 2) dominance as the largest national sporting goods brand in the US 3) superior access to the best and most innovative brands and products and 4) a revamped product and category mix that supports permanent structural margin gains in the business. After a 5-year period of roughly flat new store growth the company is embarking on a period of re-acceleration of square footage growth and will introduce 75 to 100 House of Sports stores by 2027 while 16 next generation Dick's stores are planned for 2024 alone. House of Sports economics suggest strong productivity in line with the legacy store base despite much bigger stores (120K sq. ft. versus legacy 40K sq. ft). In technology hardware, NetApp outperformed after it unveiled its three-year financial model which was better than expected. The company expects to deliver mid to upper single digit revenue growth (above consensus 4-5%) on above market growth and share gains, operating margins in excess of 30% (consensus 27%) on mix/operating expense discipline, double digit earnings per share growth (6-7% consensus) on operating leverage and a 20% plus free cash flow margin.

Investment Outlook

Investing for income is probably as old as investing itself. The need for stock to produce flow is likely timeless. That said, dividend investing has had a hard time recently. The lure of growth at seemingly any price has dominated. In such times it is important to remember that the total return from investing in a stock is the sum of three components: dividend yield + dividend growth + change in valuation.

While the dominant driver of stock-market returns over shorter time periods is the change in valuation, or what may better be understood as the mood of Mr. Market, the dominant driver over the longer-term is the combination of dividend yield and dividend growth.

Importantly, many stocks in recent times have been wholly dependent on the positive mood of Mr. Market to deliver positive returns to investors. Their earnings growth has been exceeded by a marked rise in valuation to deliver a positive outcome. This is not sustainable, and over the longer-term, the combination of dividend yield and dividend growth will again be necessary to drive positive returns. Unsurprisingly, this is largely due to the re-rating of information technology stocks, where the share price gains have far outstripped their expected earnings, and these stocks now trade at an historic premium.

Fortunately, a large diversity of businesses are dividend payers and many of these are enjoying profit growth greater than the opportunities to re-invest profitably. Moreover, having been broadly overlooked in recent years, these businesses are currently on offer at attractive valuations. The likelihood of a major rotation towards such companies is growing.

KBI Global Investors Ltd

KBI Global Sustainable Infrastructure Fund

The KBI Global Sustainable Infrastructure Fund (the "Sub-Fund") generated a positive return of 9.1% during the 12 months to end August 2024 underperforming the S&P Global Infrastructure Index which posted a positive return of 16.7% (in EUR terms). Across the three underlying sectors, utilities was the strongest performing sector followed by infrastructure capex names and then asset owners. All three sectors generated positive returns, albeit all three underperformed the index return. The Sub-Fund generated a negative return of 6.7% during the 12 months to end August 2023 outperforming the S&P Global Infrastructure Index which posted a negative return of 9.2% (in EUR terms). The Sub-Fund was in compliance with the strategy and objectives as set out in the prospectus.

Whilst volatile, the 12 month period was a period of strength for global equity markets. Initially stickier than expected inflation and continued economic strength in the US suggested that the pace of interest rate decreases could be slower and later, than many investors had expected. In this context communication services and IT were the best performing sectors in a narrow market while the weakest areas of the market were interest rate sensitive sectors (real estate and utilities). In this environment, the strategy struggled relative to the broad market due to the higher weight in utilities and the underperformance of yield sensitive sectors among asset owners. However, in the last few months of the period, there was a shift in tone with easing inflation, economic data beginning to show initial signs of weakness in the US leading the market to price in a few interest rate cuts. As a result the more interest rate sensitive sectors such as REITs and utilities outperformed over the last 6 months of the period.

All three segments underperformed the broad market in the period, but the utilities segment was the best performing of the three due to a recovery in the second half of the period. The strong performance from utilities came despite the poor performance of offshore wind names in the latter months of 2023. Orsted, Northland Power and RWE were among the strategies biggest detractors over the period; higher input cost inflation and rising interest rates through 2022 and 2023 lead to impairments on offshore wind projects which principally hit Orsted but also weighed on RWE and Northland Power. Elsewhere, the utilities segment was under pressure in early 2024 due to declining power prices in Europe. However, the segment bounced back, buoyed by expectations of interest rate cuts, an upward movement in European forward power prices off their lows, resilient earnings and increased recognition of utilities' role in supporting increased load demand from data center growth.

Meanwhile, performance across asset owners was mixed with waste names performing well but digital infrastructure names struggled dragged down by interest rate volatility. Likewise, infrastructure capex names were weak with strong performance from renewable capex names like Cadeler, Itron and Willdan partially offset by weakness from Meyer Burger and agri supply chain services names.

Investment Outlook

The KBI Global Sustainable Infrastructure strategy invests in companies which own and operate long duration assets within water, clean energy, agri business and social and digital end markets. The strategy looks to invest in long term infrastructure assets which are producing predictable cash flows (often inflation linked). When building the portfolio, we aim to provide exposure to stable regulatory environments.

There is an urgent need to upgrade our ageing infrastructure in developed markets; much of the water supply and wastewater systems for instance was designed when cities were less congested and are now in major need of overhaul. Government pledges to achieve net zero emissions by 2050 will result in a transformation of our energy infrastructure assets. Decarbonization and digitization of the electric grid will drive huge investment spend in clean energy infrastructure over the coming years. Investment in agri infrastructure will be more focused on emerging markets where increased use of storage equipment and grain handling assets, will be needed to reduce the large wastage that occurs between production and consumption. In the case of digital infrastructure, the emergence of 5G infrastructure and use of AI is a disruptive trend which will lead to ever more reliance on new communication devices. More wireless communication infrastructure will be required to support a new digital era. Following several years of under investment, governments are increasingly recognizing the need to invest in ageing infrastructure both as a way of stimulating the global economy and as a way of providing a social benefit to taxpayers.

There are three key drivers supporting increased growth in sustainable infrastructure. Significant demographic changes (such as population growth, emerging market middle class growth and urbanization for example) are set to raise demand for infrastructure sharply over coming decades. Secondly, concern over rising emissions has prompted governments to prioritize climate change objectives when enacting fiscal incentives schemes that support infrastructure end markets. Finally, advances in technology across renewable energy end markets has accelerated the trend of decarbonization. Increased growth in intermittent wind and solar energy requires additional spend in electric grid infrastructure.

KBI Global Sustainable Infrastructure Fund (Continued)

Investment Outlook (continued)

The recent uncertainty created by higher inflation readings has had an impact on both positioning across bond and equity markets. After a period of rising rates which lead to a steady rise in long term bond yields, investor expectations have recently re-set and the declining yield environment witnessed over the last 3 months has coincided with strong performance across listed infrastructure. In Q4 2024 we expect growth to continue to slow and central banks to cut rates. Therefore, we no longer see rising rates as a headwind for the strategy.

Growth has moderated as a result of the lagged impact from rising rates from 2022-2024. In this lower growth or potentially mild recessionary environment we expect listed infrastructure to perform well given the visibility across end markets. We expect investors to favour durable and predictable business models and shy away from more cyclical asset classes.

Furthermore, with more anchored expectations over higher yields, investor minds will become more focused on the outcome of the US election. We do not envisage a radical overhaul of the Inflation Reduction Act in the US, regardless of who wins the White House. While investors remain cautious, we consider the receding odds of a Republican clean sweep as welcome news for sustainable infrastructure investors.

KBI Global Investors Ltd

KBI Diversified Growth Fund

The KBI Diversified Growth Fund (the "Sub-Fund") rose by 8.4% during the 12 months to end August 2024. The Sub-Fund rose by 2.5% during the 12 months to end August 2023. The Sub-Fund was in compliance with the strategy and objectives as set out in the prospectus.

Over the year, the global equity market rose, as indicated by the rise of 22.0% of the MSCI World Equity Index, while European bond markets rose, with the ICE 5 Year + Euro Government Bond Index returning 5.7%. From a regional perspective, European equities rose by 17.5%, the US market rose 23.8%, and Pacific ex-Japan equities rose by 13.5%. Emerging market equities rose by 12.8%. The Bloomberg Commodities Index fell by 6.3% (all returns are in Euro terms). On the currency front, the Euro was strong against the US Dollar (up 2.0%) but down 1.7% against Sterling.

Over the year there were strong returns in global equities driven by positive tailwinds of improving inflation data and easing interest rate expectations. The US economy continued to defy recession fears and was still progressing toward a soft landing.

Investment Outlook

Markets have been strong in recent months, as inflation has declined while economic activity has generally held up reasonably well. Looking ahead, interest rates seem highly likely to begin to fall in the US and to continue to fall in Europe, accompanied, though, by slower economic growth. The key issue is whether or not the expected decline in growth is mild or more severe, potentially leading to a recession.

Against this somewhat uncertain background, global equity valuations are moderately high relative to history, while the valuations of some (very large cap) stocks do appear stretched. Against this background, equity and bond markets will, we believe, continue to struggle and volatility will remain high.

KBI Global Investors Ltd

KBI Global Small Cap Equity Fund

The KBI Global Small Cap Equity Fund (the "Sub-Fund") registered a rise of 17.4% during the 12 months to end August 2024, outperforming the MSCI World Small Cap Index, which rose by 13.9% (in EUR terms). The Sub-Fund registered a rise of 1.0% during the 12 months to end August 2023, outperforming the MSCI World Small Cap Index, which was unchanged over the year (in EUR terms). The Sub-Fund was in compliance with the strategy and objectives as set out in the prospectus.

Global stock markets rallied strongly over the year. The positive tailwinds of improving inflation data, easing interest rate expectations, and generally stronger earnings releases propelled stock prices higher.

Fundamentally, investors were cheered by the growing likelihood that the recent tightening cycle has ended without causing much economic or corporate difficulty. With the easing cycle now underway in many countries, and the Federal Reserve almost certain to follow shortly, the debate has now moved to the pace rather than the fact of rate cuts. Notably, this benign macro and policy backdrop was more than sufficient to outweigh continuing geopolitical concerns in the Middle East and elsewhere.

Value outperformed growth during the year under review – outperforming in every region especially in Europe and Japan.

Relative stock selection contributed positively to performance in software and services, consumer services and in consumer durable and apparel. In software and services, InterDigital outperformed as it reported strong topline performance driven by consumer electronics and the Internet of Things as it announced several new licensing agreements with Google, Samsung TV and Panasonic. The Google agreement covers 4G/5G assets as well as Pixel smartphones and FitBit devices. Recurring revenue growth did however decline for the third straight quarter driven largely by the handset segment. In consumer services, Texas Roadhouse rallied as it delivered comparable sales above expectations in Q2 (Quarter 2) with sales remarkably steady through the quarter defying the industry's decelerating trend. Texas Roadhouse is not seeing any change in consumer behaviour as it continues to see the benefit of trade down and trade up in positive traffic growth. The company feels well positioned to weather a slowdown with a value proposition and the broader steak category resilience as a special occasion destination. The company reduced its commodity inflation guidance for the third consecutive quarter as beef prices proved more favourable than previously expected. In consumer durable and apparel, KB Home outperformed as it raised FY24 (Financial Year 2024) housing revenue and gross margin guidance following solid quarterly results. Demand was consistent and traffic improved as Q2 progressed despite the rise in long rates during the year. KB Home modestly raised prices in most of its markets while incentives and mortgage concessions held steady with roughly 60% of orders having some form of mortgage concession including rate locks, similar to Q1 (Quarter 1). KB Home has seen no impact from higher resale inventory which while up from low levels remains below normalised levels.

Relative stock selection detracted from performance in pharmaceuticals, media and entertainment and in healthcare equipment and services. In pharmaceuticals, Brucker underperformed as its book to bill moderated with Q2 coming in at 0.95 although the overall backlog remains elevated at seven months and will take two years to normalise. On biopharma, the sales cycle remains elongated and management expects softness to continue near term. The company reduced Q3 (Quarter 3) guidance below consensus expectations driven by tough comparisons, weakness in China due to stimulus dynamics and softness in biopharma. Perrigo was under pressure as new FDA guidelines on the manufacturing of infant formula in March 2023 resulted in much higher levels of scrapped product at the company. As a result, Perrigo decided that it was necessary to undergo manufacturing plant remediations across their sites leading to a significant reduction in volumes in early 2024. All infant formula manufacturing sites are now up and running with volumes having normalised while Perrigo has not seen any challenges in terms of demand and Perrigo is the only US producer of store brand formula. In media and entertainment, Shutterstock underperformed following disappointing results in the content division. The company has a large library of licensed content that has become critical for training Generative AI models and this has been driving revenue growth. However, continued weakness in the content business could suggest that users are moving away from the platform likely due to lower demand. The biggest debate on the stock is potential disintermediation risk from Gen AI although management note that companies are reluctant to use AI (Artificial Intelligence) generated content for marketing purposes due to potential legal and brand risks. In healthcare equipment and services, Patterson Companies was under pressure as quarterly results were worse than expected due to ongoing headwinds from the Change Healthcare cybersecurity incident combined with a tough comparison. The company is working through the cybersecurity headwind and while it does not believe that it will suffer permanent share loss it has been compounded by the soft macro backdrop. Management believes that the topline headwinds in the dental and animal health business are transitory and not indicative of underlying trends or company performance. The dental margin should recover from the return of higher margin software revenue and cost savings.

KBI Global Small Cap Equity Fund (Continued)

Investment Outlook

Investing for income is probably as old as investing itself. The need for stock to produce flow is likely timeless. That said, dividend investing has had a hard time recently. The lure of growth at seemingly any price has dominated. In such times it is important to remember that the total return from investing in a stock is the sum of three components: dividend yield + dividend growth + change in valuation.

While the dominant driver of stock market returns over shorter time periods is the change in valuation, or what may better be understood as the mood of Mr. Market, the dominant driver over the longer-term is the combination of dividend yield and dividend growth.

Importantly, many stocks in recent times have been wholly dependent on the positive mood of Mr. Market to deliver positive returns to investors. Their earnings growth has been exceeded by a marked rise in valuation to deliver a positive outcome. This is not sustainable, and over the longer-term, the combination of dividend yield and dividend growth will again be necessary to drive positive returns. Unsurprisingly, this is largely due to the re-rating of information technology stocks, where the share price gains have far outstripped their expected earnings, and these stocks now trade at an historic premium.

Fortunately, a large diversity of businesses are dividend payers and many of these are enjoying profit growth greater than the opportunities to re-invest profitably. Moreover, having been broadly overlooked in recent years, these businesses are currently on offer at attractive valuations. The likelihood of a major rotation towards such companies is growing.

KBI Global Investors Ltd

KBI Circular Economy Fund (launched on 19 September 2023)

The KBI Circular Economy Fund increased by 16.9% during the period from inception to end August 2024, while the MSCI ACWI gained 20.5% (in EUR terms). The Sub-Fund was in compliance with the strategy and objectives as set out in the prospectus.

The period under review was a period of strength for global equity markets, albeit quite volatile. Inflation remained stubbornly high for much of the period, leading to changing expectations for the pace of interest rate cuts in the US and globally. Interest rate sensitive sectors of equity markets were especially volatile, although strength towards the end of the period was notable.

The strongest areas of the market were IT, financials and communication services. The portfolio is underweight IT and has no exposure to financials or communication services, and combined this allocation effect was a big headwind to relative performance in the period.

Stock selection was also negative in the period, particularly in the IT sector where large cap growth stocks did well. Our overweight exposure to value and small cap stocks was a headwind to performance. Artificial Intelligence (AI) exposures were especially strong performers in the period with Nvidia +165%. Our limited exposure to this trend was also a headwind.

From an end market perspective, the strongest exposures in the portfolio were shared economy, water quality and engineering & consulting. The weakest exposures in the period were E-mobility, materials reuse and water utilities.

Investment Outlook

We are optimistic that the multi-year tailwinds driving the transition to a more Circular Economy provide a compelling investment opportunity. These drivers are both economic and environmental. Economic drivers include a need to become more efficient in our consumption of resources. Environmental drivers include increased levels of regulation relating to waste management, production processes and consumer patterns.

While investors continue to pay premium valuations for growth companies, driving an extremely narrow market, we have built a well-balanced and diverse portfolio where we believe earnings growth will be better than the broader market in the coming years. Longer term, the drivers behind the transition to a circular economy are expected to become more vital as policymakers in both the public and private sectors invest to achieve their own economic and environmental targets.

KBI Global Investors Ltd

Responsible Investment Activities Report prepared by the Investment Manager

Background Information:

KBI Global Investors has a strong commitment to Responsible Investing (RI) issues, and has managed strategies with a Responsible Investment focus for more than three decades. We have been a signatory of the United Nations Principles for Responsible Investment (UNPRI) since 2007. Internally, we have robust Responsible Investment controls, policies and processes in place that govern our activities and a high-level Responsible Investing Committee to oversee all aspects of Responsible Investment policy and implementation (membership includes three of the five Executive Directors of the firm).

We implement Responsible Investing principles firstly because we believe that the use of ESG (Environmental, Social and Governance) factors has positive effects on the risk and return of investments and secondly because the use of RI principles in managing investments can help to achieve ESG goals which are worthy of achievement in their own right and which are also in the best interests of long-term investors.

Developments at the firm:

- We have been signatories of the UNPRI since 2007. The firm achieved the maximum possible rating from PRI (Principles for Responsible Investment) in each year since 2017, for all relevant modules assessed by the PRI.
- We participated in several collaborative engagements, usually on the topics of climate change and the disclosure of environmental information which have been identified by us as being our strategic areas of focus for engagement, both collaboratively and on a bilateral basis.
- We released the 2023 Revenue Aligned SDG Scores, measuring the impact of our Natural Resource portfolios and how the portfolios' revenues align with the United Nations Sustainable Development Goals (SDGs).
- The Responsible Investing Committee reviewed the exclusions for our Natural Resource strategies, and expanded the exclusions to companies generating more than 1% of revenues from thermal coal mining extraction, and companies whose activity is exposed to exploration and production of oil & gas (conventional and/or unconventional) with over 10% of revenues.
- The European Union Regulation on sustainability-related disclosures in the financial services sector ("SFDR") is now in effect and most of our assets under management are designated as Article 8 and Article 9 products. For more information https://www.kbiglobalinvestors.com/eu-sustainable-finance-disclosures2/
- We gave comments to Institutional Shareholder Services (ISS) and MSCI ESG Research on their annual consultations on their policies.
- We continued our programme of formal Responsible Investing training for staff. Most staff (and almost all investment and client-facing staff) have completed at least one Responsible Investing training course. 10% of staff have obtained the CFA Certificate in ESG Investing qualification, and some staff have also obtained the CFA Certificate in Climate Investing qualification.
- We also rolled out a sustainability training programme to all staff, provided by Vyra, an Irish environmental sustainability education platform. We conducted staff training on the European Union Sustainable Finance Disclosure Regulations, EU Taxonomy, and SFDR disclosure requirements and reporting.

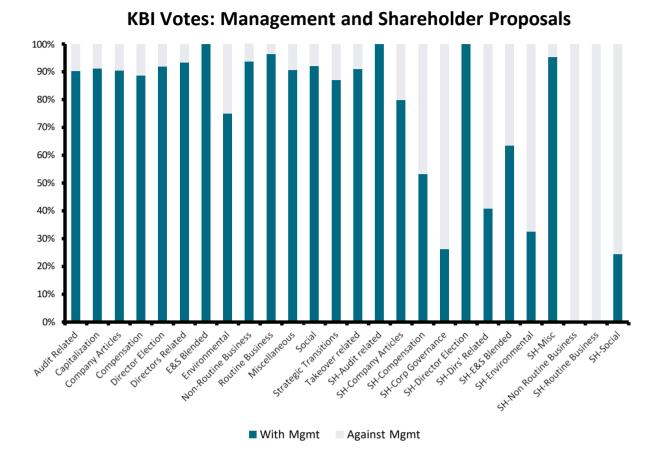

Proxy Voting

KBI Global Investors policy is to vote all securities that we are entitled to vote on behalf of our client portfolios. Proxies are voted in a manner which serves the long-term best interests of the portfolio.

In the year to August 2024, we voted on 10,453 proposals worldwide at 811 meetings for the KBI Funds. We voted against management in 8.9% of all proposals, and we voted against management on 45% of shareholder proposals. Shareholder proposals are initiatives put forward by shareholders, usually requesting management to take action on particular issues.

Responsible Investment Activities Report prepared by the Investment Manager (Continued)

Proxy Voting (Continued)

Engagement

As a specialist boutique asset manager with focused resources, we endeavour to leverage relationships to engage in collective engagement when appropriate. We are members of The United Nations Principles for Responsible Investment (PRI), Climate Action 100+, The Institutional Investors Group on Climate Change (IIGCC), the CDP (Carbon Disclosure Project) and the CERES (Coalition for Environmentally Responsible Economies) Investors Network on Climate Risk.

Examples of collaborative engagement over the year include:

- Our collaborative engagement efforts were largely, though not exclusively, focused on climate change issues. We are formal endorsers of the PRI initiative "Advance", a stewardship initiative for human rights and social issues, and the PRI initiative "Spring", a stewardship initiative for nature.
- We are a founding participant of Nature Action 100, an investor-led initiative to address nature loss and biodiversity decline, and we participate in the groups of investors leading engagement with Bunge and Smurfit Kappa.
- We continue to participate in Climate Action 100+, an initiative led by some of the biggest investors and investor networks, including the PRI and the four main European, US and Asian climate change organisations (including IIGCC and CERES), to engage with the world's largest corporate greenhouse gas emitters to curb emissions, strengthen climate-related financial disclosures and improve governance on climate change. As part of Climate Action 100+, we are part of the groups of investors leading engagement with Enel (a large Italian manufacturer and distributor of electricity and gas), LyondellBasell (a multinational chemical company) and Marathon Petroleum (a US petroleum company).

Responsible Investment Activities Report prepared by the Investment Manager (Continued)

Engagement (Continued)

- Regulator/Standard Setter Engagement:
 - O IASB: As part of the CA100+ North America Climate Accounting working group, we signed an investor letter submitting comments on the IASB's tentative agenda decision on climate related commitments. We stressed the need for additional corporate disclosures for entities that have made significant climate related commitments. In April 2024, the IASB finalized its tentative Agenda Decision regarding Climate-related Commitments (IAS 37). The investor comment letter that was coordinated by the CA100+ Working Group was referenced multiple times in the IASB's analysis.
 - Financial Accounting Standards Board: As part of the CA100+ North America Climate Accounting working group, we met with representatives from the Financial Accounting Standards Board (FASB). We outlined the existing loopholes and encouraged FASB to review its existing rules to clarify the expectations and close the loopholes. FASB encouraged the group to submit this recommendation during the agenda comment period in the second half of 2024 as a way to address some of the questions and suggestions that were made.
- As part of the ShareAction investor decarbonisation initiative with the European Chemicals sector since 2021, we wrote to several companies again, and in 2024 we focused on deeper discussions with laggard companies and responded to the SBTi consultation for the chemicals sector.

Directors' Report

The Directors present herewith the Annual Report and Audited Financial Statements of KBI Funds ICAV (the "ICAV") for the financial year ended 31 August 2024.

Statement of Directors' Responsibilities

The Directors are responsible for preparing the Directors' Report and Financial Statements, in accordance with applicable law and regulations.

The Irish Collective Asset-management Vehicles Act 2015 (the "ICAV Act") requires the directors to prepare Financial Statements for each financial year. Under that law, they have elected to prepare the Financial Statements in accordance with International Financial Reporting Standards ("IFRS") as adopted by the EU and applicable law.

The Financial Statements are required to give a true and fair view of the assets, liabilities and financial position of the ICAV at the end of the financial year and of the profit or loss of the ICAV for the financial year. In preparing these Financial Statements, the Directors are required to:

- select suitable accounting policies and then apply them consistently;
- make judgments and estimates that are reasonable and prudent;
- state whether they have been prepared in accordance with IFRS as adopted by the EU; and
- prepare the Financial Statements on the going concern basis unless it is inappropriate to presume that the ICAV will continue in business.

The Directors are responsible for keeping adequate accounting records which disclose with reasonable accuracy at any time the assets, liabilities, financial position and profit or loss of the ICAV and enable them to ensure that the Financial Statements comply with the ICAV Act, (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011, (S.I. 352 of 2011) (as amended) (the "UCITS Regulations") and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (the "Central Bank UCITS Regulations"). They have general responsibility for taking such steps as are reasonably open to them to safeguard the assets of the ICAV. In this regard they have entrusted the assets of the ICAV to a Depositary for safe-keeping. They have general responsibility for taking such steps as are reasonably open to them to prevent and detect fraud and other irregularities. The directors are also responsible for preparing a Directors' Report that complies with the requirements of the ICAV Act.

Principal Activities

A detailed review of the ICAV's activities for the financial year ended 31 August 2024 is included in the Investment Manager Reports.

Review of Business and Future Developments

A review of business and future developments is included in the Background to the ICAV on pages 2 to 6 and the Investment Manager's Reports on pages 7 to 26.

Results and Dividends

The results and dividends for the financial year are set out in the Statement of Comprehensive Income on pages 39 to 42.

Risk Management Objectives and Policies

The main risks arising from the ICAV's financial instruments are market price, foreign currency, interest rate, liquidity and counterparty credit risks as detailed in Note 2 to these Financial Statements.

Remuneration

The Directors of the ICAV who are also employees of the investment manager are not entitled to any remuneration in respect of their services as Directors of the ICAV.

Fiona Mulcahy earned a fee of EUR 30,000 per annum (31 August 2023: EUR 29,500). All other directors are not entitled to a fee. This is detailed in Note 16.

Remuneration (Continued)

None of the Directors are currently in receipt of variable remuneration in respect of their services as Directors of the ICAV and none of the Directors are currently in receipt of a pension from the ICAV. An annual review has been undertaken and no material changes have been made to the remuneration policy.

Events during the Financial Year

The following Sub-Fund launched during the financial year:

Launch Date

KBI Circular Economy Fund

19 September 2023

Termination Date

The following share classes launched during the financial year:

| | Launch Date |
|--|-------------------|
| KBI Circular Economy Fund Euro Class A Shares | 19 September 2023 |
| KBI Circular Economy Fund Euro Class G Shares | 21 December 2023 |
| KBI Global Energy Transition Fund Euro Class G (Distributing) Shares | 31 January 2024 |
| KBI Global Energy Transition Fund Singapore Dollar Class B Shares | 1 February 2024 |
| KBI Global Energy Transition Fund US Dollar Class G Shares | 1 February 2024 |
| KBI Water Fund Sterling Class F Shares | 17 May 2024 |
| KBI Global Sustainable Infrastructure Fund Singapore Dollar Class B Shares | 7 June 2024 |
| KBI Global Energy Transition Fund US Dollar Class F Shares | 20 June 2024 |

The following share class terminated during the financial year:

| KBI Developed Equity Fund Euro Class D (Distributing) Shares | 8 March 2024 |
|--|----------------|
| KBI Integris Global Equity Fund Euro Class C Shares | 22 March 2024 |
| KBI Integris Global Equity Fund Euro Class H (Distributing) Shares | 12 July 2024 |
| KBI Water Fund Sterling Class C Shares | 29 August 2024 |

A new KBI Funds ICAV prospectus, inclusive of supplements for all Sub-Funds, dated 4 April 2024 was filed with the Central Bank of Ireland.

A supplement for the KBI Global Small Cap Equity Fund dated 12 June 2024 was filed with the Central Bank of Ireland.

There have been no other significant events during the financial year end, which, in the opinion of the Directors of the ICAV, may have had an impact on the Financial Statements for the financial year ended 31 August 2024.

Post Balance Sheet Events

There have been no events subsequent to the financial year end, which, in the opinion of the Directors of the ICAV, may have had an impact on the Financial Statements for the financial year ended 31 August 2024.

Directors

The Directors who held office as at 31 August 2024 were:

Patrick Cassells

Fiona Mulcahy (Independent)

Derval Murray

Padraig Sheehy

Gerard Solan (Chair)

Directors (Continued)

The table below shows the Directors' interests in the Sub-Funds of the ICAV at 31 August 2024:

| | KBI Global Energy Transition Fund | KBI Water Fund | KBI Emerging Markets Equity Fund | KBI Developed Equity Fund |
|--------------------------------|---|-----------------------------|---|---------------------------------|
| Padraig Sheehy | - | - | 3,371 | 978 |
| Gerard Solan | 32 | 21 | 1,291 | 11,015 |
| Derval Murray | 594 | 387 | 1,618 | 3,672 |
| Patrick Cassells | - | 14 | - | 1,012 |
| | | | | |
| | KBI Global Resource Solutions Fund | KBI Eurozone Equity Fund | KBI Global Sustainable Infrastructure Fund | KBI Diversified Growth Fund |
| Padraig Sheehy | Global Resource | | Sustainable Infrastructure | |
| Padraig Sheehy Gerard Solan | Global Resource Solutions Fund | Equity Fund | Sustainable Infrastructure Fund | Growth Fund |
| | Global Resource Solutions Fund | Equity Fund 811 | Sustainable Infrastructure Fund 2,710 | Growth Fund |

The table below shows the Directors' interests in the Sub-Funds of the ICAV at 31 August 2023:

| | KBI Global Energy Transition Fund | KBI Water Fund | KBI Emerging Markets Equity Fund | KBI Developed Equity Fund |
|--------------------------------|---|-----------------------------|---|---------------------------------|
| Padraig Sheehy | - | - | 1,105 | 978 |
| Gerard Solan | 5,468 | 2,709 | 1,291 | 9,830 |
| Derval Murray | 594 | 387 | 1,618 | 3,672 |
| Patrick Cassells | - | 14 | - | 1,012 |
| | | | | |
| | KBI Global Resource Solutions Fund | KBI Eurozone Equity Fund | KBI Global Sustainable Infrastructure Fund | KBI Diversified Growth Fund |
| Padraig Sheehy | Global Resource | | Sustainable Infrastructure | |
| Padraig Sheehy Gerard Solan | Global Resource Solutions Fund | Equity Fund | Sustainable Infrastructure Fund | Growth Fund |
| · | Global Resource Solutions Fund 214 | Equity Fund 1,372 | Sustainable Infrastructure Fund 3,286 | Growth Fund |

Each of Mr Padraig Sheehy, Mr Gerard Solan, Ms Derval Murray and Mr Patrick Cassells are employees of KBI Global Investors Limited, the Investment Manager to the ICAV.

Shares Schemes

Mr Sheehy, Mr Solan, Ms Murray and Mr Cassells are all employees of the Investment Manager and have been allocated shares in the Sub-Funds of the ICAV as part of their variable employee remuneration package. These shares were allotted through the Investment Manager's Irish Revenue approved profit sharing scheme 'APSS'.

Shares Schemes (Continued)

Below is a statement of their APSS holdings at 31 August 2024:

| | KBI Emerging Markets Equity Fund | KBI Developed Equity Fund | KBI Global Resource Solutions Fund | KBI Global Sustainable Infrastructure Fund |
|------------------|---|---------------------------------|---|--|
| Patrick Cassells | - | - | - | 1,031 |
| Derval Murray | 141 | - | 212 | 2,949 |
| Padraig Sheehy | 312 | - | 37 | 888 |
| Gerard Solan | 787 | 1,668 | - | 3,026 |

The shares are included within Directors' interests in the Sub-Funds of the ICAV as disclosed on page 32.

Transactions Involving Directors

Derval Murray and Gerard Solan are also Directors of the Investment Manager. There are no other contracts or arrangements of any significance in relation to the business of the ICAV in which the Directors or Secretary had any interest as defined in the Act, at any time during the financial year.

Accounting Records

The Directors believe that they have complied with the requirements of Sections 109 to 115 of the ICAV Act 2015, with regard to keeping adequate accounting records. The Directors have appointed Northern Trust International Fund Administration Services (Ireland) Limited to maintain adequate accounting records. The address at which this business is located is as follows:

Georges Court 54-62 Townsend Street Dublin 2 D02 R156 Ireland

Transactions with Connected Persons

Any transaction carried out with a UCITS by a manager, depositary, investment adviser and/or associated or group companies of these ("connected persons") must be carried out as if negotiated at arm's length. Transactions must be in the best interests of the shareholders.

The Directors are satisfied that there are arrangements (evidenced by written procedures) in place, to ensure that the obligations set out in Regulation 43(1) of the Central Bank UCITS Regulations are applied to all transactions with connected persons, and are satisfied that transactions with connected persons entered into during the financial year complied with the obligations set out in Regulation 43(1) of the Central Bank UCITS Regulations.

Independent Auditors

In accordance with Section 125 of the ICAV Act 2015, Deloitte Ireland LLP, Chartered Accountants and Statutory Audit firm, have expressed their willingness to continue in office as the ICAV's auditors.

Going Concern

The Directors have a reasonable expectation that the ICAV has adequate resources to continue in operational existence for the foreseeable future. Accordingly, they continue to adopt the going concern basis in preparing the Financial Statements.

Corporate Governance Code

Irish Funds, the association for the funds industry in Ireland, has published a corporate governance code that may be adopted on a voluntary basis by Irish authorised investment funds. The Board of Directors has adopted the Code, and the ICAV was in compliance with all elements of the Code during the financial year.

The text of the Code is available from the Irish Funds website, www.irishfunds.ie.

On Behalf of the Board of Directors

Gerard Solan Director

2 December 2024

Pat Cassells

Patrick Cassells Director

Depositary Report to the Shareholders

We, Northern Trust Fiduciary Services (Ireland) Limited ("NTFSIL"), appointed Depositary to KBI Funds ICAV (the "ICAV") provide this report solely in favour of the shareholders of the ICAV for the period from 1 September 2023 to 31 August 2024 (the "Annual Accounting Period"). This report is provided in accordance with the UCITS Regulations – European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011 (SI No 352 of 2011), as amended, Directive 2009/65/EU which implemented into Irish Law (the "Regulations"). We do not, in the provision of this report, accept nor assume responsibility for any other purpose or person to whom this report is shown.

In accordance with our Depositary obligation as provided for under the Regulations, we have enquired into the conduct of the ICAV for the Annual Accounting Period and we hereby report thereon to the shareholders of the ICAV as follows;

We are of the opinion that the ICAV has been managed during the Annual Accounting Period, in all material respects:

- (i) in accordance with the limitations imposed on the investment and borrowing powers of the ICAV by the constitutional documents and by the Regulations; and
- (ii) otherwise in accordance with the provisions of the constitutional document and the Regulations.

Deloitte Ireland LLP Chartered Accountants & Statutory Audit Firm

INDEPENDENT AUDITOR'S REPORT TO THE SHAREHOLDERS OF KBI FUNDS ICAV

Report on the audit of the annual accounts

Opinion on the annual accounts of KBI Funds ICAV (the 'ICAV')

In our opinion the annual accounts:

- give a true and fair view of the assets, liabilities and financial position of the ICAV as at 31 August 2024 and of the profit for the financial year then ended; and
- have been properly prepared in accordance with the relevant financial reporting framework and the applicable Regulations.

The annual accounts we have audited comprise:

- the Statement of Comprehensive Income;
- the Statement of Financial Position;
- the Statement of Changes in Net Assets Attributable to Holders of Redeemable Participating Shares;
- the Statement of Cash Flows; and
- the related notes 1 to 24, including material accounting policy information as set out in note 1.

The relevant financial reporting framework that has been applied in their preparation is the Irish Collective Asset-Management Acts 2015-2020 ("the ICAV Act") and IFRS Accounting Standards as issued by the International Accounting Standards Board (IASB) and as adopted by the European Union ("IFRS") ("the relevant financial reporting framework").

The applicable regulations that have been applied in their preparation is the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 and Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations, 2019 ("the applicable Regulations").

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (Ireland) (ISAs (Ireland)) and applicable law. Our responsibilities under those standards are described below in the "Auditor's responsibilities for the audit of the annual accounts" section of our report.

We are independent of the ICAV in accordance with the ethical requirements that are relevant to our audit of the annual accounts in Ireland, including the Ethical Standard issued by the Irish Auditing and Accounting Supervisory Authority, and we have fulfilled our other ethical responsibilities in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Conclusions relating to going concern

In auditing the annual accounts, we have concluded that the directors' use of the going concern basis of accounting in the preparation of the annual accounts is appropriate.

Based on the work we have performed, we have not identified any material uncertainties relating to events or conditions that, individually or collectively, may cast significant doubt on the ICAV's ability to continue as a going concern for a period of at least twelve months from when the annual accounts are authorised for issue.

Our responsibilities and the responsibilities of the directors with respect to going concern are described in the relevant sections of this report.

Other information

The other information comprises the information included in the Annual Report and Audited Financial Statements, other than the annual accounts and our auditor's report thereon. The directors are responsible for the other information contained within the Annual Report and Audited Financial Statements. Our opinion on the annual accounts does not cover the other information and, except to the extent otherwise explicitly stated in our report, we do not express any form of assurance conclusion thereon.

/Continued on next page

/Continued from previous page

INDEPENDENT AUDITOR'S REPORT TO THE SHAREHOLDERS OF KBI FUNDS ICAV

Our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the annual accounts or our knowledge obtained in the audit or otherwise appears to be materially misstated. If we identify such material inconsistencies or apparent material misstatements, we are required to determine whether there is a material misstatement in the annual accounts or a material misstatement of the other information. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact.

We have nothing to report in this regard.

Responsibilities of directors

As explained more fully in the Statement of Directors' Responsibilities, the directors are responsible for the preparation of annual accounts that give a true and fair view and have been properly prepared in accordance with the ICAV Act, and for such internal control as the directors determine is necessary to enable the preparation of annual accounts that are free from material misstatement, whether due to fraud or error.

In preparing the annual accounts, the directors are responsible for assessing the ICAV's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the directors either intend to liquidate the ICAV or to cease operations, or have no realistic alternative but to do so.

Auditor's responsibilities for the audit of the annual accounts

Our objectives are to obtain reasonable assurance about whether the annual accounts as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs (Ireland) will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these annual accounts.

A further description of our responsibilities for the audit of the financial statements is located on IAASA's website at: https://iaasa.ie/publications/description-of-the-auditors-responsibilities-for-the-audit-of-the-financial-statements. This description forms part of our auditor's report.

Report on other legal and regulatory requirements

Matters on which we are required to report by the ICAV Act and the applicable Regulations

In our opinion, the information given in the directors' report is consistent with the annual accounts and the directors' report has been prepared in accordance with the ICAV Act.

Matters on which we are required to report by exception

Based on the knowledge and understanding of the ICAV and its environment obtained in the course of the audit, we have not identified material misstatements in the directors' report.

We have nothing to report in respect of the provisions in the ICAV Act which require us to report to you if, in our opinion, the disclosures of directors' remuneration specified by the ICAV Act are not made.

Opinion on other matters prescribed by the applicable Regulations

Based solely on the work undertaken in the course of the audit, we report that:

- We have obtained all the information and explanations which we consider necessary for the purposes of our audit.
- In our opinion the accounting records of the ICAV were sufficient to permit the annual accounts to be readily and properly
 audited.

INDEPENDENT AUDITOR'S REPORT TO THE SHAREHOLDERS OF KBI FUNDS ICAV

• The annual accounts are in agreement with the accounting records.

Use of our report

This report is made solely to the ICAV's shareholders, as a body, in accordance with Section 120(1) (b) of the ICAV Act. Our audit work has been undertaken so that we might state to the ICAV's shareholders those matters we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the ICAV and the ICAV's shareholders as a body, for our audit work, for this report, or for the opinions we have formed.

Notes to the Financial Statements

For the financial year ended 31 August 2024

1. Significant Accounting Policies

a) Basis of Preparation

The Financial Statements of KBI Funds ICAV (the "ICAV") are prepared in accordance with International Financial Reporting Standards as adopted by the European Union ("IFRS") and interpretations adopted by the International Accounting Standards Board (the "IASB"), and Irish statute comprising the Irish Collective Asset-management Vehicles Act 2015 and pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011 (the "UCITS Regulations") and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (the "Central Bank UCITS Regulations").

The preparation of Financial Statements in conformity with IFRS requires the ICAV to make use of estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the Financial Statements and the reported amounts of revenues and expenses during the reporting period. Although these estimates are based on management's best knowledge of the amount, event or actions, actual results ultimately may differ from those estimates.

In preparing the Statement of Cash Flow under IFRS, cash and cash equivalents includes cash in hand, highly liquid interest bearing securities with original maturities of three months or less and bank overdrafts.

The Financial Statements have been prepared on a going concern basis. At a Sub-Fund level, KBI Global Equity Fund, and KBI ACWI Equity Fund terminated on 21 November 2022 and 11 May 2023, respectively. KBI Circular Economy Fund launched on 19 September 2023. The ICAV is able to meet all of its liabilities from its assets. The performance and risks of the ICAV and its Sub-Funds are reviewed on a regular basis throughout the financial year. Therefore, the Directors believe that the ICAV will continue in operational existence for the foreseeable future and is financially sound. The Directors are satisfied that, at the time of approving the Financial Statements, it is appropriate to adopt the going concern basis in preparing the Financial Statements of the ICAV.

International Financial Reporting Standards

These Financial Statements have been prepared to existing standards and amendments to existing standards effective 1 September 2023.

New standards, amendments and interpretations issued but not yet effective for the year beginning 1 September 2023 and not early adopted

Certain new accounting standards and interpretations have been published that are not mandatory for 31 August 2024 reporting periods and have not been early adopted by the Fund.

The following standards are not expected to have a material impact on the entity in the current or future reporting periods or on foreseeable future transactions:

- IFRS 17 Insurance contracts
- Amendments to IAS 1 and IFRS Practice Statement 2 Disclosure of Accounting Policies
- Amendments to IAS 8 Definition of Accounting Estimates

There are no other standards, interpretations or amendments to existing standards that are not yet effective that would be expected to have a significant impact on the ICAV.

Comparative Figures

The comparative figures for these Financial Statements are for the financial year ended 31 August 2023.

b) Investments

i. Classification, Recognition and Derecognition

IFRS 9 sets out the requirements for recognition and measurement of all financial assets and financial liabilities including derivative instruments. The ICAV has classified all financial instruments as financial assets or financial liabilities at fair value through profit or loss ("FVTPL").

For the financial year ended 31 August 2024

- 1. Significant Accounting Policies (Continued)
- b) Investments (Continued)
 - i. Classification, Recognition and Derecognition (Continued)

The ICAV recognises financial assets and financial liabilities when all significant rights and access to the benefits from the assets and the exposure to the risks inherent in those benefits are transferred to the ICAV. The ICAV derecognises financial assets and financial liabilities when all such benefits and risks are transferred from the ICAV. On initial recognition, the ICAV classifies financial assets as measured at amortised cost or FVTPL.

A financial asset is measured at amortised cost if it meets both of the following conditions and is not designated as at FVTPL:

The category of financial assets and financial liabilities at fair value through profit or loss comprises:

- · it is held within a business model whose objective is to hold assets to collect contractual cash flows; and
- · its contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest.

All other financial assets of the ICAV are measured at FVTPL.

Business model assessment

In making an assessment of the objective of the business model in which a financial asset is held, the ICAV considers all of the relevant information about how the business is managed, including:

- the documented investment strategy and the execution of this strategy in practice. This includes whether the investment strategy focuses on earning contractual interest income, maintaining a particular interest rate profile, matching the duration of the financial assets to the duration of any related liabilities or expected cash outflows or realising cash flows through the sale of the assets;
- how the performance of the portfolio is evaluated and reported to the Fund's management;
- the risks that affect the performance of the business model (and the financial assets held within that business model) and how those risks are managed;
- how the investment manager is compensated: e.g. whether compensation is based on the fair value of the assets managed or the contractual cash flows collected; and
- the frequency, volume and timing of sales of financial assets in prior periods, the reasons for such sales and expectations about future sales activity.

Transfers of financial assets to third parties in transactions that do not qualify for derecognition are not considered sales for this purpose, consistent with the ICAV's continuing recognition of the assets.

The ICAV has determined that it has two business models:

- Held-to-collect business model: this includes cash and cash equivalents, balances due from brokers and receivables from reverse sale and repurchase agreements. These financial assets are held to collect contractual cash flow; and
- Other business model: this includes equity investments, P-notes, derivatives and fund of funds. These financial assets are managed and their performance is evaluated, on a fair value basis, with frequent sales taking place.

Financial assets that are classified under amortised cost include time deposits, due from brokers, deposits and accounts receivable.

Financial liabilities that are attributable to changes in the credit risk of that liability be presented in other comprehensive income, unless the recognition of the effects of changes in the liability's credit risk in other comprehensive income would create or enlarge an accounting mismatch in profit or loss. Changes in fair value attributable to a financial liability's credit risk are not subsequently reclassified to profit or loss, but are instead transferred to retained earnings when the financial liability is derecognised.

Financial liabilities arising from Redeemable Shares issued by a Sub-Fund are carried at the redemption amount, representing the Investor's right to a residual interest in that Sub-Fund's assets.

For the financial year ended 31 August 2024

1. Significant Accounting Policies (Continued)

b) Investments (Continued)

i. Classification, Recognition and Derecognition (Continued)

Financial liabilities carried at amortised cost include bank overdraft, accounts and other payables.

A regular way purchase of financial assets is recognised using trade date accounting. From this date, any gains and losses, arising from changes in fair value of the financial assets or financial liabilities, are recorded on an average cost basis.

The ICAV classifies all their investments as financial instruments at fair value through profit and loss.

The ICAV recognises financial assets and financial liabilities on the date it becomes a party to the contractual provisions of the instrument, and all significant rights and access to the benefits from the assets, and the exposure to the risks inherent in those benefits, are transferred to the ICAV. The ICAV derecognises financial assets and financial liabilities when all such benefits and risks are transferred from the ICAV.

ii. Measurement

Financial instruments are measured initially at fair value (transaction price) plus, in the case of a financial asset or financial liability not at fair value through profit or loss, transaction costs that are directly attributable to the acquisition or issue of the financial asset or financial liability. Transaction costs on financial assets and financial liabilities at fair value through profit or loss are expensed immediately, while on other financial instruments they are amortised.

Subsequent to initial recognition, all instruments classified at fair value through profit or loss are measured at fair value with changes in their fair value recognised in the Statement of Comprehensive Income.

Financial assets and financial liabilities, other than those at fair value through profit or loss, are measured at amortised cost using the effective interest rate method, less impairment loss, if any.

Financial liabilities arising from the redeemable participating shares issued by a Fund are carried at the redemption amount, representing the Investors' right to a residual interest in that Fund's assets.

iii. Fair Value Measurement Principles

The fair value of financial instruments is based on their quoted market prices at the Statement of Financial Position date without any deduction for estimated future selling costs. Financial assets and financial liabilities are priced at current mid prices. The ICAV uses the closing mid prices for the Sub-Funds.

If a quoted market price is not available on a recognised stock exchange or from a broker/dealer for non-exchange-traded financial instruments, the fair value of the instrument is estimated using valuation techniques, including use of recent arm's length market transactions, reference to the current fair value of another instrument that is substantially the same, discounted cash flow techniques, option pricing models or any other valuation technique that provides a reliable estimate of prices obtained in actual market transactions.

iv. Impairment

The ICAV recognises loss allowances for Expected Credit Loss ("ECLs") on financial assets measured at amortised cost.

The ICAV measures loss allowances at an amount equal to lifetime ECLs, except for the following, which are measured at 12-month ECLs:

- financial assets that are determined to have low credit risk at the reporting date; and
- other financial assets for which credit risk (i.e. the risk of default occurring over the expected life of the asset) has not increased significantly since initial recognition.

When determining whether the credit risk of a financial asset has increased significantly since initial recognition and when estimating ECLs, the Sub-Funds consider reasonable and supportable information that is relevant and available without undue cost or effort. This includes both quantitative and qualitative information and analysis, based on the Fund's historical experience and informed credit assessment and including forward-looking information.

For the financial year ended 31 August 2024

1. Significant Accounting Policies (Continued)

b) Investments (Continued)

iv. Impairment (Continued)

The ICAV assumes that the credit risk on a financial asset has increased significantly if it is more than 30 days past due.

The ICAV considers a financial asset to be in default when:

- the borrower is unlikely to pay its credit obligations to the Fund in full, without recourse by the Fund to action such as realising security (if any is held); or
- the financial asset is more than 90 days past due.

The ICAV considers a financial asset and cash held to/from brokers to have low credit risk when the credit rating of the counterparty is equivalent to the globally understood definition of 'investment grade'.

Lifetime ECLs are the ECLs that result from all possible default events over the expected life of a financial instrument.

12-month ECLs are the portion of ECLs that result from default events that are possible within the 12 months after the reporting date (or a shorter period if the expected life of the instrument is less than 12 months).

The maximum period considered when estimating ECLs is the maximum contractual period over which the ICAVs are exposed to credit risk.

Measurement of ECLs

ECLs are a probability-weighted estimate of credit losses. Credit losses are measured as the present value of all cash shortfalls (i.e. the difference between the cash flows due to the entity in accordance with the contract and the cash flows that the Fund expects to receive).

ECLs are discounted at the effective interest rate of the financial asset.

Presentation of allowance for ECLs in the Statement of Financial Position

Loss allowances for financial assets measured at amortised cost are deducted from the gross carrying amount of the assets.

c) Cash and Cash Equivalents

Cash comprises of current deposits with banks. Cash equivalents are short-term highly liquid investments that are readily convertible to known amounts of cash, are subject to an insignificant risk of changes in value, and are held for the purpose of meeting short-term cash commitments rather than for investment or other purposes.

d) Income and Expenses

Dividends, gross of foreign withholding taxes, where applicable, are included as income when the security is declared to be ex-dividend. Bank interest income is accounted for on an effective interest rate. Interest income on fixed and floating rate securities is accounted for on an effective yield basis. Income received arising on fixed interest securities is recognised as a component of operating income. Further analysis of this operating income is shown in Note 3.

e) Fees and Charges

Investment management fees, administration fees, custody fees, sub-custody fees and other operating expenses are charged to the Statement of Comprehensive Income on an accruals basis.

f) Valuation Point

The valuation point used to value the securities for the purpose of the Financial Statements is that of 30 August 2024, the last business day of the financial year.

For the financial year ended 31 August 2024

1. Significant Accounting Policies (Continued)

g) Investment Funds

Investment funds which are traded in active markets are valued using quoted market prices at the Statement of Financial Position date. Investment funds which are not publicly traded are normally valued at the underlying audited net asset value as advised by the managers or administrators of these Investment funds, unless the Investment Manager is aware of good reasons why such a valuation would not be the most appropriate indicator of fair value.

h) Redeemable Participating Shares

Redeemable Participating Shares are redeemable at the Shareholder's option and are classified as financial liabilities. Any distributions on these redeemable participating shares are recognised in the Statement of Comprehensive Income as finance costs.

i) Gains and Losses on Investments

Realised gains or losses on disposal of investments and financial derivative instruments during the financial year and unrealised gains and losses on valuation of investments and financial derivative instruments held at the financial year end are included in the net gains and losses on financial assets and liabilities at fair value through profit or loss within the Statement of Comprehensive Income.

j) Taxation

Dividend and interest income received by the ICAV may be subject to withholding tax imposed in the country of origin. Investment income is recorded gross of such taxes and the corresponding withholding tax is recognised as a tax expense.

k) Distributions

As outlined in the "Background to the ICAV", KBI Water Fund, KBI Emerging Markets Equity Fund, KBI Developed Equity Fund, KBI Eurozone Equity Fund, KBI North America Equity Fund, KBI Integris Global Equity Fund and KBI Global Sustainable Infrastructure Fund may distribute. Where applicable, distributions are classified as Finance Costs in the Statement of Comprehensive Income. See Note 15 for details of distributions.

1) Forward Foreign Currency Contracts

Forward foreign currency transactions are valued based on the closing forward contract rates on the relevant foreign exchange market on a daily basis. Realised gains and losses and movements in unrealised gains and losses are included in the net gains and losses on financial assets and liabilities at fair value through profit or loss within the ICAV's Statement of Comprehensive Income.

m) Foreign Exchange

Foreign exchange gains and losses on financial assets and financial liabilities at fair value through profit and loss are recognised together with other changes in the fair value. Net currency gains/(losses) as set out in Note 4, are net foreign exchange gains and losses on monetary financial assets and financial liabilities other than those classified at fair value through profit or loss.

Assets and liabilities denominated in foreign currencies, other than the functional currency of the ICAV, have been translated at the rate of exchange ruling at 31 August 2024. Transactions in foreign currencies are translated into Euro at the exchange rate ruling at the date of the transaction. Gains and losses on foreign exchange transactions are recognised in the Statement of Comprehensive Income in determining the result for the financial year.

For the financial year ended 31 August 2024

n) Transaction Costs

Transaction costs are incremental costs that are directly attributable to the acquisition, issue or disposal of a financial asset or liability. An incremental cost is one that would not have been incurred if the entity had not acquired, issued or disposed of the financial instrument.

o) Use of Estimates and Judgements

The preparation of Financial Statements in conformity with IFRS requires the ICAV to make use of estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the Financial Statements and the reported amounts of revenues and expenses during the financial reporting year. Although these estimates are based on management's best knowledge of the amount, event or actions, actual results ultimately may differ from those estimates. The areas involving a higher degree of judgement or complexity or areas where estimates and assumptions are significant to the Financial Statements are disclosed in Note 2(b). The estimates and underlying assumptions are reviewed on an on-going basis.

For the financial year ended 31 August 2024

2. Financial Risk Management

Strategy in using Financial Instruments

The investment objectives of the ICAV are summarised in the "Background to the ICAV" on pages 2 to 6.

Day-to-day risk management is undertaken by the Investment Manager, as detailed in the sections below. The Administrator and Depositary report separately to the Directors on a quarterly basis.

The Sub-Funds are subject to a number of investment restrictions imposed by external regulators or self-imposed by the Prospectus and the Instrument of Incorporation. These restrictions are intended to reduce the risks associated with the Sub-Funds financial instruments. The Investment Manager also reports monthly to the Designated Directors on whether the Sub-Funds have been operated in accordance with the investment guidelines as defined in the Prospectus as well as any self-imposed limitations.

In pursuing its investment objective, the ICAV is exposed to a variety of financial risks: market risk (including market price risk, interest rate risk and currency risk), credit risk and liquidity risk that could result in a reduction in the ICAV's net assets. The Investment Manager's overall risk management programme focuses on the unpredictability of financial markets and seeks to minimise potential adverse effects on the Sub-Funds' financial performance.

These policies for managing risk have been applied throughout the financial year.

Market Risk

Market risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises three types of risk: foreign currency risk, interest rate risk and market price risk.

The Investment Manager moderates market risk through a careful selection of securities and other financial instruments within specified limits. The maximum risk resulting from financial instruments is determined by the fair value of the financial instruments. The Sub-Funds' overall market positions are monitored on a daily basis by the ICAV's Investment Manager and are reviewed on a regular basis by the Board of Directors.

At 31 August 2024, the ICAV's market risk is affected by three main components:

- a) changes in actual market prices ("market price risk");
- b) foreign currency movements ("foreign currency risk"); and
- c) interest rate movements ("interest rate risk").

a. Market Price Risk

Market price risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market prices.

The ICAV's equities, debt securities and Investment Funds are susceptible to market price risk arising from uncertainties about future prices of the instruments.

The Directors of the ICAV manage the market price risks inherent in the investment portfolio by ensuring full and timely access to relevant information from the Investment Manager. The Board meets regularly and at each meeting reviews investment performance and overall market positions. The Directors monitor the Investment Managers' compliance with the ICAV's objectives. There were no material changes to the ICAV's policies and processes for managing market risk and the methods and assumptions used to measure risk during the year. The Sub-Funds do not currently invest in derivative instruments and are not involved in netting or hedging arrangements with the exception of KBI Water Fund. The Sub-Funds of the ICAV are long-only equity funds. The global exposure is calculated daily by the Sub-Funds' administrator in the calculation of the net asset value. For Sub-Funds exposed to derivative instruments or netting or hedging activity, global exposure is calculated based on the Commitment Approach as outlined in the ICAV's Risk Management Procedure ('RMP') document.

Details of the nature of the Sub-Funds' investment portfolios at the Statement of Financial Position date are disclosed in the Schedule of Investments on pages 139 to 227.

For the financial year ended 31 August 2024

2. Financial Risk Management (Continued)

a. Market Risk (Continued)

Market price risk - Sensitivity analysis

As at 31 August 2024, if equity and investment fund prices had increased by 25% at the Statement of Financial Position date, with all other variables held constant, this would have increased net assets attributable to holders of redeemable participating shares of the Sub-Funds as follows:

As at 31 August 2024

| | KBI Global Energy Transition Fund EUR | KBI Water Fund USD | KBI Emerging Markets Equity Fund EUR | KBI Developed Equity Fund EUR |
|--------------------------------|--|---------------------------------------|---|--|
| Investment assets Equities | 320,385,570 | 378,395,538 | 4,853,925 | 106,687,650 |
| Total Investment assets | 320,385,570 | 378,395,538 | 4,853,925 | 106,687,650 |
| | KBI Global Resource Solutions Fund EUR | KBI Eurozone Equity Fund EUR | KBI North America Equity Fund USD | KBI Integris Global Equity Fund EUR |
| Investment assets | | | | |
| Equities | 11,325,184 | 10,876,251 | 7,908,510 | 5,066,192 |
| Total Investment assets | 11,325,184 | 10,876,251 | 7,908,510 | 5,066,192 |
| | KBI Global Sustainable Infrastructure Fund EUR | KBI Diversified Growth Fund EUR | KBI Global Small Cap Equity Fund EUR | KBI Circular Economy Fund* EUR |
| Investment assets Equities | 266,049,026 | - | 1,378,921 | 1,566,625 |
| Investment Funds | _ | 2,212,818 | _ | _ |
| Total Investment assets | 266,049,026 | 2,212,818 | 1,378,921 | 1,566,625 |

^{*}Sub-Fund launched on 19 September 2023.

As at 31 August 2024, KBI Global Equity Fund and KBI ACWI Equity Fund held no investments subject to market price risk as the Sub-Funds terminated on 21 November 2022 and 11 May 2023, respectively.

Conversely, if equity and investment funds prices had decreased by 25%, at the Statement of Financial Position date, with all other variables held constant, this would have decreased net assets attributable to holders of redeemable participating shares of the Sub-Funds by an equal amount. Actual trading results could differ from the above sensitivity analysis and these differences may be material.

(NB: the above sensitivity analysis is based on the assumption that only equities and investment funds are exposed to market price risk).

For the financial year ended 31 August 2024

2. Financial Risk Management (Continued)

a. Market Risk (Continued)

Market price risk - Sensitivity analysis (Continued)

As at 31 August 2023, if equity and investment fund prices had increased by 25% at the Statement of Financial Position date, with all other variables held constant, this would have increased net assets attributable to holders of redeemable participating shares of the Sub-Funds as follows:

As at 31 August 2023

| | KBI Global Energy Transition Fund EUR | KBI Water Fund USD | KBI Emerging Markets Equity Fund EUR | KBI Developed Equity Fund EUR |
|---|---|--|---|--|
| Investment assets Equities | 344,261,163 | 323,645,704 | 5,001,939 | 105,779,196 |

| | | KBI Global Sustainable Infrastructure Fund EUR | KBI Diversified Growth Fund EUR | KBI Global Small Cap Equity Fund EUR |
| Investment assets Equities Investment Funds | | 367,727,645 - | - 2,000,731 | 1,273,971 |
| Total Investment assets | - = | 367,727,645 | 2,000,731 | 1,273,971 |

As at 31 August 2023, KBI Global Equity Fund and KBI ACWI Equity Fund held no investments subject to market price risk as the Sub-Funds terminated on 21 November 2022 and 11 May 2023, respectively.

Conversely, if equity and investment fund prices had decreased by 25% at the Statement of Financial Position date, with all other variables held constant, this would have decreased net assets attributable to holders of redeemable participating shares of the Sub-Funds by an equal amount. Actual trading results could differ from the above sensitivity analysis and these differences may be material.

(NB: the above sensitivity analysis is based on the assumption that only equities and investment funds are exposed to market price risk).

For the financial year ended 31 August 2024

2. Financial Risk Management (Continued)

b. Currency Risk

Currency risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates. Certain of the Sub-Funds' assets, liabilities and income are denominated in currencies other than Euro with the exception of the KBI Water Fund and the KBI North America Equity Fund whose assets, liabilities and income are denominated in currencies other than US Dollars. They are, therefore, exposed to currency risk as the value of the securities denominated in other currencies will fluctuate due to changes in exchange rates. Income denominated in foreign currencies is converted to the functional currency of the Sub-Fund on recognition (accruals basis). The Sub-Funds do not currently invest in derivative instruments and are not involved in netting or hedging arrangements with the exception of KBI Water Fund which holds Foreign Exchange ("FX") forwards for share class hedging and Portfolio hedging purposes.

In accordance with ICAV policy, the Investment Manager monitors the Sub-Funds' currency position on a daily basis and the Board of Directors review it on a regular basis.

There were no material changes to the ICAV's policies and processes for managing currency risk and the methods used to measure risk during the financial year.

The tables below document the Sub-Funds' exposure to currency risks as at 31 August 2024. All figures are stated in the base currency of the Fund (noted in parentheses).

^{*}Sub-Fund launched on 19 September 2023.

c. Interest Rate Risk

The Sub-Funds' interest bearing financial assets and financial liabilities expose them to risks associated with the effects of fluctuations in the prevailing levels of market interest rates on their financial position and cash flows.

For the financial year ended 31 August 2024

2. Financial Risk Management (Continued)

c. Interest Rate Risk (Continued)

Interest rate risk is managed, in part, by the security selection process of the Investment Manager which includes predictions of future events and their impact on interest rates, diversification and duration. In accordance with ICAV policy, the Investment Manager monitors the Sub-Funds' overall interest sensitivity on a daily basis and the Board of Directors review it on a regular basis. There were no material changes to the ICAV's policies and processes for managing interest rate risk and the methods used to measure risk since the prior year end.

As at the Statement of Financial Position date, none of the Sub-Funds had any significant exposure to interest rate risk.

d. Credit Risk

The ICAV takes on exposure to credit risk, which is the risk that a counterparty or an issuer will be unable to pay amounts in full when due.

The carrying amounts of financial assets best represent the maximum credit risk exposure at the Statement of Financial Position date. In accordance with ICAV policy, the Investment Manager monitors the Sub-Funds' overall credit risk on a daily basis and the Board of Directors review it on a regular basis. There were no material changes to the ICAV's policies and processes for managing credit risk and the methods used to measure risk since the prior year end.

As at the Statement of Financial Position date, the Sub-Funds' financial assets exposed to credit risk amounted to the following:

| Cash and cash equivalents Interest and other receivables | EUR KBI Global Energy Transition Fund 4,664,089 4,852,198 9,516,287 | USD KBI Water Fund* 70,870,655 15,969,994 86,840,649 | EUR KBI Emerging Markets Equity Fund 423,029 61,295 484,324 | EUR KBI Developed Equity Fund 4,401,186 782,195 5,183,381 |

For the financial year ended 31 August 2024

2. Financial Risk Management (Continued)

d. Credit Risk (Continued)

All transactions in listed securities are settled/paid for upon delivery using approved brokers. The risk of default is considered minimal, as delivery of securities sold is only made once the broker has received payment. Payment is made on a purchase once the securities have been received by the broker. The trade will fail if either party fails to meet its obligation.

The Investment Manager analyses credit concentration based on the counterparty of the financial assets that the Sub-Fund holds. Details of counterparties, where applicable, are disclosed in the Schedule of Investments.

Northern Trust Fiduciary Services (Ireland) Limited ("NTFSIL") is the appointed Depositary of the Sub-Fund, responsible for the safe-keeping of assets. NTFSIL has appointed The Northern Trust Company ("TNTC") as its global sub-custodian. Both NTFSIL and TNTC are wholly owned subsidiaries of Northern Trust Corporation ("NTC"). As at financial year-end date 31 August 2024, NTC had a long term credit rating from Standard & Poor's of A+ (31 August 2023: A+).

TNTC (as global sub-custodian of NTFSIL) does not appoint external sub-custodians within the U.S., the U.K., Ireland, Canada, Belgium, France, Germany, Netherlands and Saudi Arabia. However, in all other markets, TNTC appoints local external sub-custodians.

NTFSIL, in the discharge of its depositary duties, verifies the Sub-Fund's ownership of Other Assets, (as defined under Other Assets, Art 22(5) of UCITS V Directive 2014/91/EU), by assessing whether the Fund holds the ownership based on information or documents provided by the Fund or where available, on external evidence.

TNTC, in the discharge of its delegated depositary duties, holds in custody (i) all financial instruments that may be registered in a financial instruments account opened on the books of TNTC and (ii) all financial instruments that can be physically delivered to TNTC. TNTC ensures all financial instruments (held in a financial instruments account on the books of TNTC) are held in segregated accounts in the name of the Fund, clearly identifiable as belonging to the Fund, and distinct and separately from the proprietary assets of TNTC, NTFSIL and NTC.

In addition TNTC, as banker, holds cash of the Sub-Fund on deposit. Such cash is held on the Statement of Financial Position of TNTC. In the event of insolvency of TNTC, in accordance with standard banking practice, the Fund will rank as an unsecured creditor of TNTC in respect of any cash deposits.

Where relevant please note the following currencies, Jordanian Dinar, Saudi Riyal, cash in the onshore China market (principally the currency of Chinese Yuan Renminbi, and any other currencies remitted into accounts in the onshore China market), are no longer held on the Statement of Financial Position of TNTC. For these off-book currencies, the ICAV's cash exposure is directly to the relevant local sub-custodian/financial institution in the market.

Insolvency of NTFSIL and or one of its agents or affiliates may cause the Fund's rights with respect to its assets to be delayed.

The Board manages risk by monitoring the credit quality and financial position of the Depositary and such risk is further managed by the Depositary monitoring the credit quality and financial positions of sub-custodian appointments.

e. Liquidity Risk

The main liability of the Sub-Funds is the redemption of any shares that investors wish to sell. The Sub-Funds' constitution provides for the daily creation and cancellation of shares and they are, therefore, exposed to the liquidity risk of meeting shareholder redemptions at any time.

The Sub-Funds' financial instruments include holdings in investment funds which may not be easily liquidated at an amount close to fair value in order to meet liquidity requirements, or to respond to specific events such as deterioration in the credit worthiness of any particular issuer. The Sub-Funds' listed securities are considered to be readily realisable as they are all listed on major worldwide stock exchanges.

The Sub-Funds may, from time to time, invest in derivative contracts traded over the counter, which are not traded in an organised market and may be illiquid. As a result, the Sub-Funds may not be able to liquidate quickly its investments in these instruments at an amount close to their fair value to meet its liquidity requirements or to respond to specific events such as deterioration in the creditworthiness of any particular issuer.

For the financial year ended 31 August 2024

2. Financial Risk Management (Continued)

e. Liquidity Risk (Continued)

In accordance with ICAV policy, the Investment Manager monitors the Sub-Fund's liquidity position on a daily basis and the Board of Directors review it on a regular basis.

There were no material changes to the ICAV's policies and processes for managing liquidity risk and the methods used to measure risk since the prior year end.

The tables below analyse the Sub-Funds' financial liabilities into relevant maturity groupings based on the remaining period at the Statement of Financial Position date to the contractual maturity date. The amounts in the table are the contractual undiscounted cash flows. Balances due within twelve months equal their carrying balances as the impact of discounting is not significant. All amounts are stated in the base currency of the Sub-Funds.

Redeemable participating shares are redeemed on demand at the holder's option.

f. Fair Value of Financial Assets and Liabilities

Most of the Sub-Funds' financial instruments are carried at fair value on the Statement of Financial Position. Usually the fair value of the financial instruments can be reliably determined within a reasonable range of estimates. For certain other financial instruments, including amounts due from/to brokers, accounts payable and accrued expenses, the carrying amounts approximate fair value due to the immediate or short-term nature of these financial instruments. The carrying value of all of the Sub-Funds' financial assets and liabilities at the Statement of Financial Position date approximated their fair values.

Fair Value Disclosure

IFRS 13 "Financial Instruments: Disclosure" requires disclosure relating to the fair value hierarchy in which fair value measurements are categorised for assets and liabilities in the Statement of Financial Position.

The disclosures are based on a three-level fair value hierarchy for the inputs used in valuation techniques to measure fair value.

The fair value of financial assets and financial liabilities traded in an active market (such as traded securities) are based on latest available quoted mid-market prices for Sub-Funds priced at midday and at the closing mid prices for other Sub-Funds.

A financial instrument is regarded as quoted in an active market if the quoted prices are readily and regularly available from an exchange, dealer, broker, industry group, pricing service, or regulatory agency, and those prices represent actual and regularly occurring market transactions on an arm's length basis. The fair value of financial assets and financial liabilities that are not traded in an active market is determined by using valuation techniques. The Sub-Funds use a variety of methods and make assumptions that are based on market conditions existing at the financial year end date.

The Sub-Funds classify fair value measurements using a fair value hierarchy that reflects the significance of the inputs used in making the measurements. The fair value hierarchy has the following levels:

- Quoted prices (unadjusted) in active markets for identical assets or liabilities (Level 1);
- Inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly (that is, as prices) or indirectly (that is, derived from prices) (Level 2); or
- Inputs for the asset or liability that are not based on observable market data (that is, unobservable inputs) (Level 3).

For the financial year ended 31 August 2024

Investments, whose values are based on quoted market prices in active markets and, therefore, classified within Level 1, include active listed equities. Level 2 includes investment funds. The ICAV does not adjust the quoted price for these instruments.

Financial instruments that trade in markets that are not considered to be active but are valued based on quoted market prices, dealer quotations or alternative pricing sources supported by observable inputs are classified within Level 2.

The Level 2 amounts above represent investment funds and forward exchange contracts.

There were no significant transfers between Level 1 and Level 2 during the financial year.

There were no Level 3 instruments held during the financial year ended 31 August 2024 and 31 August 2023.

Financial Assets and Liabilities not measured at Fair Value

The financial assets and liabilities not measured at fair value through profit or loss are short-term financial assets and financial liabilities whose carrying amounts approximate fair value. Cash and cash equivalents are categorised as Level 1 and all other financial assets and liabilities not measured at fair value through profit or loss are categorised as Level 2 in the fair value hierarchy.

For the financial year ended 31 August 2024

^{*}Sub-Fund ceased trading on 11 May 2023.

For the financial year ended 31 August 2024

11. Share Capital

Participating Shares

The authorised share capital of the ICAV is 500,000,000,000 Shares of no par value and 300,000 redeemable non-participating shares of EUR 1 each. Non-participating shares do not entitle the holders thereof to any dividend and on a winding up entitle the holders thereof to receive the amount paid up thereon but do not otherwise entitle them to participate in the assets of the ICAV. The Directors have the power to allot shares up to the authorised share capital of the ICAV. There are 300,000 non-participating shares of EUR 1 each currently in issue which are held by the Investment Manager and its nominees. The Investment Manager may redeem these Shares shortly after the ICAV is launched provided that the ICAV maintains a minimum capital amount of EUR 300,000 at all times.

Variation of rights

The rights attached to any class may be varied or abrogated with the consent in writing of the holders of three-fourths in number of the issued shares of that class, or with the sanction of a special resolution passed at a separate general meeting of the holders of the shares of the class, and may be so varied or abrogated either whilst the ICAV is a going concern or during or in contemplation of a winding-up.

Voting rights

On a show of hands at a general meeting or class meeting of the ICAV, every Shareholder holding shares who is present in person or by proxy shall have one vote and on a poll every Shareholder present in person or by proxy shall have one vote for every share of which he/she is the holder.

Distribution on winding up

Subject to the provisions of the ICAV Act, if the ICAV shall be wound up the liquidator shall apply the assets of each Sub-Fund in such manner and order as he thinks fit in satisfaction of creditors' claims relating to that Sub-Fund.

The assets available for distribution amongst the holders shall be applied as follows:

- i) Firstly, in the payment to the Shareholders of each Class or Fund of a sum in the Functional Currency (or in any other currency selected and at such rate of exchange as determined by the liquidator) as nearly as possible equal to the Net Asset Value of the Shares of the relevant Class or Fund held by such Shareholders respectively as at the date of commencement of winding up;
- ii) Secondly, in the payment to the holders of non-participating shares of sums up to the nominal amount paid up thereon out of the assets of the ICAV not comprised within any Fund provided that if there are insufficient assets to enable such payment in full to be made, no recourse shall be had to the assets comprised within any of the Funds:
- iii) Thirdly, in the payment to the Shareholders of each Class or Fund of any balance then remaining in the relevant Fund, in proportion to the number of Shares held in the relevant Class or Fund; and
- iv) Fourthly, any balance then remaining and not attributable to any Fund or Class shall be apportioned between the Funds and Classes pro-rata to the Net Asset Value of each Fund or attributable to each Class immediately prior to any distribution to Shareholders and the amounts so apportioned shall be paid to Shareholders prorata to the number of Shares in that Fund or Class held by them.

^{*}Launched 7 June 2024.

^{**}Terminated 13 June 2023.

^{***}Sub-Fund launched on 19 September 2023.

^{*****}Launched 19 September 2023. *****Launched 21 December 2023.

For the financial year ended 31 August 2024

13. Fees

Investment Management Fee

Under the provisions of the discretionary investment management agreement, the ICAV will pay the Investment Manager a fee of up to 2.50% per annum of the Net Asset Value (plus VAT, if any) of KBI Water Fund, KBI Emerging Markets Equity Fund, KBI Developed Equity Fund, KBI Global Resource Solutions Fund, KBI Eurozone Equity Fund, KBI North America Equity Fund, KBI Integris Global Equity Fund, KBI Global Sustainable Infrastructure Fund, KBI Diversified Growth Fund, KBI Global Small Equity Cap Fund and KBI Circular Economy Fund. Within these maximum permitted limits, the Investment Manager's fee may differ between Sub-Funds and between classes of the same Sub-Fund. This fee shall be accrued daily on each dealing day and payable monthly in arrears.

The ICAV will pay the Investment Manager a fee of up to 1.5% per annum of the Net Asset Value of the KBI Global Energy Transition Fund (plus VAT, if any) in respect of Euro Class A, Euro Class C, Euro Class D, Euro Class F and Sterling Class A Shares and an annual fee of up to 2.5% per annum of the Net Asset Value of this Sub-Fund (plus VAT, if any) for all other Share Classes.

Investment Management fees of EUR 38,685,287 (31 August 2023: EUR 35,366,139) were charged during the financial year, EUR 6,617,464 of which were outstanding at the financial year end (31 August 2023: EUR 6,733,530).

Administration Fee

Under the provisions of the administration agreement, the ICAV shall pay to the Administrator out of the assets of each Sub-Fund attributable to each Class an annual fee which shall be accrued weekly on each Dealing Day and payable monthly in arrears, at a rate which will not exceed 0.10% of the Net Asset Value of KBI Global Energy Transition Fund, KBI Water Fund, KBI Emerging Markets Equity Fund, KBI Developed Equity Fund, KBI Global Resource Solutions Fund, KBI Eurozone Equity Fund, KBI North America Equity Fund, KBI Integris Global Equity Fund, KBI Global Sustainable Infrastructure Fund, KBI Diversified Growth Fund, KBI Global Small Equity Cap Fund and KBI Circular Economy Fund (plus VAT, if any).

The Administrator shall also be entitled to be repaid out of the assets of the Sub-Fund all of its reasonable out-of-pocket expenses incurred on behalf of the Sub-Fund, which shall include legal fees, couriers' fees and telecommunication costs and expenses.

Administration fees of EUR 1,589,732 (31 August 2023: EUR 1,595,628) were charged during the financial year, EUR 262,869 of which were outstanding at the financial year end (31 August 2023: EUR 581,358).

Depositary Fee

Under the provisions of the depositary agreement, the ICAV shall pay to the Depositary out of the assets of each Sub-Fund attributable to each Class an annual fee which shall be accrued weekly on each Dealing Day and payable monthly in arrears, at a rate which will not exceed 0.10% of the Net Asset Value of KBI Global Energy Transition Fund, KBI Water Fund, KBI Emerging Markets Equity Fund, KBI Developed Equity Fund, KBI Global Resource Solutions Fund, KBI Eurozone Equity Fund, KBI North America Equity Fund, KBI Integris Global Equity Fund, KBI Global Sustainable Infrastructure Fund, KBI Diversified Growth Fund, KBI Global Small Equity Cap Fund and KBI Circular Economy Fund (plus VAT, if any).

The Depositary shall also be entitled to be repaid out of the assets of each Sub-Fund all of its reasonable out-of-pocket expenses incurred on behalf of the Sub-Fund which shall include couriers' fees and telecommunication costs and other expenses incurred on behalf of the Sub-Fund by the Depositary in the proper performance of its duties (plus VAT, if any).

Depositary fees of EUR 3,512,941 (31 August 2023: EUR 3,523,843) were charged during the financial year, EUR 577,339 of which were outstanding at the financial year end (31 August 2023: EUR 1,265,353).

14. Efficient Portfolio Management and Use of Financial Derivative Instruments

The Investment Manager may utilise derivatives and other techniques and instruments (including, but not limited to, options, swaps, futures and forwards) whether the intention of providing protection against risks of gaining exposure to certain markets, sectors or securities, or otherwise of increasing the return on the Assets of each Sub-Fund. Such derivatives and other techniques and instruments will only be used for efficient portfolio management purposes in accordance with the conditions and limits laid down by the Central Bank of Ireland. The Investment Manager may also, when facilities become available in the relevant markets, lend the Portfolio securities and/or purchase securities subject to repurchase agreements. No securities were purchased subject to repurchase agreements during the financial year.

For the financial year ended 31 August 2024

14. Efficient Portfolio Management and Use of Financial Derivative Instruments (Continued)

Open derivative contracts held at the Statement of Financial Position date are disclosed in the Schedule of Investments beginning on page 139.

17. Auditor Remuneration

The remuneration for all work carried out by the statutory audit firm in respect of the financial year is as follows:

| | Year ended | Year ended |
|--|----------------|----------------|
| | 31 August 2024 | 31 August 2023 |
| | EUR | EUR |
| Statutory audit of the Company accounts* | 81,180 | 89,833 |
| | 81,180 | 89,833 |

^{*}Inclusive of VAT.

18. Taxation

The ICAV is an investment undertaking as defined in Section 739B of the Taxes Consolidation Act 1997, as amended ("TCA").

The ICAV will not be liable for tax in respect of its income and gains, other than on the occurrence of a chargeable event. A chargeable event includes any distribution or any redemption or transfer of Shares.

A chargeable event does not include:

- i) Any transactions in relation to Redeemable Participating Shares held in a recognised clearing system as designated by order of the Revenue Commissioners of Ireland; or
- ii) An exchange of Redeemable Participating Shares representing one Sub-Fund for another Sub-Fund of the ICAV; or
- iii) An exchange of Redeemable Participating Shares arising on a qualifying amalgamation or reconstruction of the ICAV with another Sub-Fund.

A chargeable event will not occur in respect of Redeemable Participating Shareholders who are neither resident nor ordinarily resident in Ireland and who have provided the ICAV with a relevant declaration to that effect. There were no chargeable events during the financial year.

In the absence of an appropriate declaration, the ICAV will be liable for Irish tax on the occurrence of a chargeable event and the ICAV reserves its right to withhold such taxes from payments to relevant shareholders.

Capital gains, dividends and interest received may be subject to withholding taxes imposed by the country of origin and such taxes may not be recoverable by the ICAV or its Shareholders. A chargeable event includes any distribution payment to shareholders or any encashment, redemption or transfer of shares or an ending of a Relevant Period.

19. Soft Commission Arrangements

There are no soft commission arrangements for the financial year ended 31 August 2024 (31 August 2023: Nil).

20. Comparative Figures

The comparative information is supplied for the Statement of Financial Position as at 31 August 2023. The comparative information supplied for the Statement of Comprehensive Income, the Statement of Changes in Net Assets Attributable to Holders of Redeemable Participating Shares and the Statement of Cash Flows is for the financial year from 1 September 2022 to 31 August 2023.

21. Events During the Financial Year

The following Sub-Fund launched during the financial year:

Launched Date 19 September 2023

KBI Circular Economy Fund

For the financial year ended 31 August 2024

21. Events During the Financial Year (Continued)

The following Share Classes launched during the financial year:

A new KBI Funds ICAV Prospectus, inclusive of Supplements for all Sub-Funds, dated 4 April 2024 was filed with the Central Bank of Ireland.

A supplement for the KBI Global Small Cap Equity Fund dated 12 June 2024 was filed with the Central Bank of Ireland.

There have been no other events during the financial year, which, in the opinion of the Directors of the ICAV, may have had an impact on the Financial Statements for the financial year ended 31 August 2024.

22. Reconciliation of Net Asset Value in accordance with IFRS

At 31 August 2024, an adjustment was required to the Financial Statements. This was required in order to bring the Financial Statements in line with IFRS. This adjustment was for the purposes of the year-end Financial Statements only and did not affect the monthly reported dealing net asset value. The Net Asset Value of the Funds has been adjusted by the formation expenses written off and dealing after the NAV's cut off point, in accordance with IFRS. Note 12 shows the dealing NAV's per Share by Share Class prior to the adjustment described below.

^{*}Sub-Fund launched on 19 September 2023.

Other notes to the Financial Statements (Unaudited)

Information in respect of underlying investments:

The KBI Diversified Growth Fund invests in the following underlying Sub-Funds:

| Underlying Sub-Fund | Domiciled | Investment Management Fee % |
|--|-----------|--|
| KBI Emerging Markets Equity Fund | Ireland | 0% per annum of Net Asset Value attributable to Euro Class |
| KBI Developed Equity Fund | Ireland | 0% per annum of Net Asset Value attributable to Euro Class |
| KBI Global Resource Solutions Fund | Ireland | 0% per annum of Net Asset Value attributable to Euro Class |
| KBI Eurozone Equity Fund | Ireland | 0% per annum of Net Asset Value attributable to Euro Class |
| KBI Global Sustainable Infrastructure Fund | Ireland | 0% per annum of Net Asset Value attributable to Euro Class |
| KBI Global Small Capital Equity Fund | Ireland | 0% per annum of Net Asset Value attributable to Euro Class |

Appendix 1 - Securities Financing Transactions Regulation (Unaudited)

The following information is presented with regard to Regulation (EU) 2015/2365 on transparency of securities financing transactions regulation ("SFTR").

In May 2021, the Directors of KBI Funds ICAV agreed to terminate the securities lending program with Northern Trust on a permanent basis. Securities lending activity had been suspended since April 2020.

Appendix 2 - UCITS Remuneration Disclosures (Unaudited)

Remuneration

The ICAV has adopted a remuneration policy as required by the UCITS Regulations and which follows the European Securities and Markets Authority ("ESMA") Guidelines on Sound Remuneration Policies in a way and to the extent that is appropriate to the ICAV's size, and internal organisation, and the nature, scope and complexity of its activities.

The ICAV's remuneration policy is designed to ensure that any relevant conflicts of interest can be managed appropriately at all times. The remuneration policy has been adopted by the Directors, who will review the policy annually and any revisions to the remuneration policy require their approval.

Identified Staff

The ICAV has determined that the following persons would fall within the categories of staff to which remuneration policy applies (Identified Staff):

(i) Independent Non-Executive Directors.

| | Headcount | Total Fixed Remuneration EUR | Total Variable Remuneration EUR | Total Remuneration EUR |
|-------------------------------------|-----------|------------------------------------|---------------------------------------|------------------------------|
| Independent Non-Executive Directors | 1 | 30,000 | - | 30,000 |

The ICAV does not pay any variable remuneration to any of its Identified Staff.

Investment Manager

The ICAV has delegated portfolio management to the Investment Manager which is subject to an equivalent remuneration regime to that in the UCITS directive:

The Fixed, Variable and Total Remuneration given below represents the total remuneration of 18 identified staff of the Investment Manager and is based on data which has been provided by the Investment Manager*.

| | Total Fixed Remuneration EUR | Total Variable Remuneration EUR | Total Remuneration EUR |
|-------------------------------|------------------------------------|---------------------------------------|------------------------------|
| Investment Manager | - | - | - |
| Designated Staff - 18 persons | 1,149,906 | 691,821 | 1,841,726 |

*The methodology used for this financial year has been amended to better reflect the relative movement in AuM (Assets under Management) of Sub-Funds of the ICAV across the two main strategies of the Investment Manager, namely (i) Global Equities and (ii) Natural Resources. Separate teams manage each strategy, and the remuneration statistics of each team are now calculated using the total AuM of the relevant strategy. Previously, the remuneration statistics for each team were calculated using the total AuM of the Investment Manager.

For comparison/transparency purposes the remuneration statistics for this financial year based on the previous methodology is also detailed in the table below.

| | Total Fixed Remuneration EUR | Total Variable Remuneration EUR | Total Remuneration EUR |
|-------------------------------|------------------------------------|---------------------------------------|------------------------------|
| Investment Manager | - | - | - |
| Designated Staff - 18 persons | 803,354 | 480,967 | 1,284,321 |

Appendix 3 - European Union's Sustainable Finance Disclosure Regulation ("SFDR") (Unaudited)

Sustainable Financing Disclosure Reporting ("SFDR")

1. Multi-asset Strategy Funds

· KBI Diversified Growth Fund

The KBI Diversified Growth Fund does not have as its objective sustainable investment, nor does it promote environmental and/ or social characteristics. As a result, the Sub-Fund does not fall within the scope of the Taxonomy Regulation. The investments underlying this Sub-Fund do not take into account the EU criteria for environmentally sustainable economic activities.

Principal Adverse Impact Reporting

The Investment Manager does not consider the adverse impacts of investment decisions taken in respect of the Sub-Fund on sustainability factors. The Sub-Fund does not promote environmental and/or social characteristics or pursue an objective of sustainable investment. Instead, the objective of the Sub-Fund is to provide steady long term capital growth by investing in a combination of collective investment schemes, which are designed to provide exposure (directly or indirectly through the use of financial derivative instruments) to various asset classes such as global equities and equity-related securities, global debt and debt-related securities, currencies and commodities through employing the policies outlined above.

Accordingly, in identifying suitable securities for investment by the Sub-Fund, the Investment Manager uses other selection criteria including opportunities based on financial criteria as anticipated and assessed by the Investment Manager and does not currently consider adverse impacts of investment decisions on sustainability factors.

NTAC:3NS-20 251

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: KBI Global Energy Transition Fund (the "product")

Legal entity identifier: 635400UCQYVGO94KDT51

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective? Yes It made **sustainable** It promoted Environmental/Social (E/S) characteristics and investments with an while it did not have as its objective a environmental objective: sustainable investment, it had a proportion of in economic activities that 95% of sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in economic Taxonomy activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally with an environmental objective in Χ sustainable under the EU economic activities that do not qualify as Taxonomy environmentally sustainable under the EU Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective:

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the

investment does not

social objective and that the investee

companies follow

good governance

practices.

significantly harm any environmental or

does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the product were reductions in harm to the environment and climate arising from the emissions of greenhouse gases. This was achieved by investing in a portfolio of companies which, in the opinion of the Investment Manager, on an aggregate portfolio basis, generated a substantial proportion of their turnover from and operate on a sustainable basis in the energy transition sector. The Investment Manager used a range of sustainability indicators to measure the extent to which the environmental characteristics of the product were met. Investors should refer to

the next section below for an assessment of how the sustainability indicators performed during the reference period.

The product was managed with the aim of progressively reducing net carbon emissions of investee companies and of eventually reaching net zero emissions by 2050. The Investment Manager monitored the carbon intensity of companies in which the product invested. Carbon intensity is a measure of greenhouse gas emissions, in tonnes, relative to the revenue of the company or portfolio. The Investment Manager obtained carbon intensity data from the Data Provider.

While the product promoted carbon emission reduction and better corporate practices, investors should be aware that this product does not have reduction of carbon emissions as its objective within the meaning of Article 9(3) of SFDR.

The environmental objectives to which the sustainable investments contributed were climate change mitigation and climate change adaptation.

The extent of the product's impact is further described in the section below headed "How did this financial product consider principal adverse impacts on sustainability factors?". The proportion of the product that was aligned with the environmental and social characteristics is disclosed under the section below headed "What was the proportion of sustainability-related investments?". The objectives of the sustainable investments are set out under the heading "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The Investment Manager used three indicators to measure the environmental characteristics of the product as follows:

- The percentage of revenues earned on an estimated basis by investee companies which are from the energy transition sector.
- The weighted average ESG rating of the product, as determined by the use of ESG ratings of companies, supplied by an external data provider of ESG research and ratings.
- The carbon intensity of the product measured by an external provider of carbon footprint measurement services.

The following shows how each indicator performed during the reference period under review. Each measure was calculated based on the portfolio holdings and relevant metric at the end of the period under review.

| Sustainability Indicator | 2024 | 2023 |
|---|-------|-------|
| Percentage (estimated) of revenues earned by investee companies from the energy transition sector | 88.9% | 84.4% |

...and compared to previous periods?

See table in the section headed "How did the sustainability indicators perform?".

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

This product invests partially in sustainable investments.

The objectives of these sustainable investments are the reduction in harm to the environment and climate arising from the emissions of greenhouse gases.

The sustainable investments contribute to these objectives, as measured, for example, by key resource efficiency indicators on the use of energy and renewable energy and the production of greenhouse gas emissions.

Please refer to the Section above headed "How did the sustainability indicators perform?" for more detail on the indicators used to assess the contribution to the objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments of the product were assessed to ensure that they do not cause significant harm to any environmental or social objective. This assessment made use of Principal Adverse Impact Indicators ("PAI Indicators"), where applicable and where data was sufficiently available, and ensured that certain minimum standards were reached for each applicable PAI Indicator.

The following PAI Indicators were used throughout the period under review.

| PAI Indicator | Explanation | 2024 | 2023 |
|------------------|--|----------------------|----------------------|
| 1. GHG Emissions | Sum of portfolio companies' Carbon Emissions - Scope 1 (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 185,879 tons CO2e | 175,214 tons CO2e |
| 1. GHG Emissions | Sum of portfolio companies' Carbon Emissions - Scope 2 (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 19,805 tons CO2e | 14,551 tons CO2e |
| 1. GHG Emissions | Sum of portfolio companies' Scope 3 - Total Emission Estimated (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 620,506 tons CO2e | 398,643 tons CO2e |

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

| | The total annual Scope 1, Scope 2, and estimated Scope 3 GHG emissions associated with the market | | |

Note that in the PAI Indicators table above, for items 6a to 6i, there may be no investments in companies in the relevant NACE sector or there may be no data available for any companies in the relevant NACE sector. In such cases the table will show a value of 0 GWh / million EUR revenue.

How were the indicators for adverse impacts on sustainability factors taken into account?

The indicators for adverse impacts on sustainability factors were taken into account by applying certain exclusion strategies aligned to the PAI Indicators and by monitoring the PAI Indicators in the following manner:

- 1. When ensuring that a sustainable investment did not cause significant harm to any environmental or social objective, the Investment Manager made use of various PAI Indicators. Please refer to the Section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail. The Investment Manager ensured that certain minimum standards were reached for each applicable PAI Indicator.
- 2. The product did not invest in any companies materially engaged in certain activities which, in the opinion of the Investment Manager, are associated with a particularly adverse impact on sustainability. These included companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, companies with a high degree of involvement in coal extraction or coal-fired electricity generation, and companies with material revenues from fracking, for-profit prisons, civilian firearms and ammunition, weapons and weapons systems, and the production of nuclear weapons.
- 3. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact. Please refer to the Section below headed "What actions have been taken to meet the environmental and/or social characteristics during the reference period?" for more detail.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, the sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights through the use of environmental and UNGC (UN Global Compact) controversies screening as an indication for alignment with OECD guidelines / UN guiding principles along with other tools including ESG scores and research as part of the investment.

The product did not invest in any company which violates, repeatedly and seriously, one or more of the ten principles of the UN Global Compact. To implement this, the Investment Manager used data from data providers which rely on international conventions such as the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, as sources of data to determine risk exposure of companies' geographies of operation and business segments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Over the reference period, the product considered principal adverse impacts on sustainability factors. This was done in the following manner:

- 1. A minimum proportion of the investments held in this product must be sustainable investments. In determining whether an investment was a sustainable investment, a number of PAI Indicators were used and where the adverse impact was considered to be excessive, in the judgement of the Investment Manager, based on whether the adverse impact breaches certain thresholds set by the Investment Manager, such investments were not deemed to be sustainable investments. Please refer to the Section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail.
- The Investment Manager's decision on whether to make an investment in a
 company, and the size of that investment, took into account the PAI Indicators
 (referred to above) relating to the social, environmental and governance
 characteristics of that company, including the adverse impact that the company
 had on sustainability.
- The product did not invest in any companies engaged in certain activities which, in the opinion of the Investment Manager, were associated with a particularly adverse impact on sustainability, in excess of certain thresholds. These included

companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, companies with a high degree of involvement in coal extraction or coal-fired electricity generation, and companies with material revenues from fracking, for-profit prisons, civilian firearms and ammunition, weapons and weapons systems, and the production of nuclear weapons.

4. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact, with a view to influencing the company to change its activities in a manner which will reduce the adverse impact.

What were the top investments of this financial product?

The following sets out a list of the top investments (and relevant sector) of the financial product using the Global Industry Classification Standard (GICS). GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure.

The data presented in this Section shows the top 15 investments (ie the greatest proportion of investments of the product) during the reference period and has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments (which were not used to promote the environmental and social characteristics of the product) are not included in the table below.

| Largest Investments | Sector | % Assets | Country |
|--|------------------------|----------|---------------|
| RWE AG | UTILITIES | 4.3 | Germany |
| First Solar Inc | INFORMATION TECHNOLOGY | 3.9 | United States |
| Vestas Wind Systems A/S | INDUSTRIALS | 3.8 | Denmark |
| ASML Holding NV | INFORMATION TECHNOLOGY | 3.7 | Netherlands |
| Samsung Sdi Co Ltd | INFORMATION TECHNOLOGY | 3.7 | South Korea |
| HA Sustainable Infrastructure Capital Inc | FINANCIALS | 3.1 | United States |
| National Grid PLC | UTILITIES | 3.1 | UK |
| Northland Power Inc | UTILITIES | 2.9 | Canada |
| Greencoat Renewables Plc | UTILITIES | 2.9 | Ireland |
| Aptiv PLC | CONSUMER DISCRETIONARY | 2.8 | United States |
| Sunrun Inc | INDUSTRIALS | 2.7 | United States |
| Eaton Corp Plc | INDUSTRIALS | 2.7 | United States |
| Ormat Technologies Inc | UTILITIES | 2.7 | United States |
| Analog Devices Inc | INFORMATION TECHNOLOGY | 2.7 | United States |
| Nextera Energy Inc | UTILITIES | 2.6 | United States |

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 year to end August 2024

What was the proportion of sustainability-related investments?

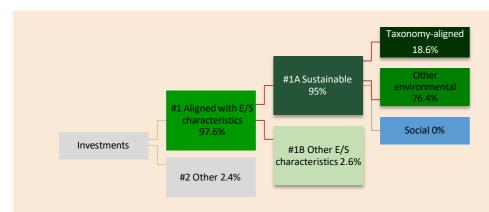

Asset allocation describes the share of investments in specific assets.

Information on the proportion of the product which promoted environmental/social characteristics and the proportion of the product invested in sustainable investments during the reference period is provided below.

What was the asset allocation?

Based on data as at 31 August 2024, 97.6% of the investments of the product were used to meet the environmental characteristics promoted by the product in accordance with the binding elements of the investment strategy. The proportion of the portfolio which was invested in Sustainable Investments was 95%.

The remaining portion of investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including ESG-related exclusions.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#20ther includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In the previous reference period, the proportion of the product's assets invested in environmentally sustainable activities was 91.8%. It should be noted that in this reference period only a minority of investee companies are required to report the proportion of their revenues that are aligned with the EU Taxonomy.

Proportion of investments contributing to EU Taxonomy objectives:

| | Climate change mitigation | Climate change adaptation |
|------------------|---------------------------|---------------------------|
| As % of Turnover | 13.1% | 0% |
| As % of Capex | 18.5% | 0.4% |

| As % of Opex | 15.3% | 0.1% | |
|--------------|-------|------|--|
|--------------|-------|------|--|

In which economic sectors were the investments made?

The following table consists of the product's exposure to sub-industries. For the purpose of the table, the Global Industry Classification Standard (GICS) has been used. GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure. The table below shows the composition of the investments held by the product, by GICS sector during the reference period. The data presented has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments are not included in the table below.

| Sector | % Assets |
|---|----------|
| COMMUNICATION SERVICES | 0 |
| CONSUMER DISCRETIONARY | 6.4 |
| CONSUMER STAPLES | 0 |
| ENERGY | 0 |
| FINANCIALS | 3.1 |
| HEALTH CARE | 0 |
| INDUSTRIALS | 25.9 |
| INFORMATION TECHNOLOGY | 29.9 |
| MATERIALS | 1.5 |
| REAL ESTATE | 0 |
| UTILITIES | 31 |
| Note: EXPOSURE TO COMPANIES ACTIVE IN THE FOSSIL FUEL SECTOR (i.e. the percentage of the product's market value exposed to issuers with fossil fuels related activities, including extraction, processing, storage and transportation of petroleum products, natural gas, and thermal and metallurgical coal) | 18.7% |

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of sustainable investments aligned with the EU Taxonomy was 18.6%.

The environmental objectives to which the sustainable investments contributed were climate change mitigation and climate change adaptation.

In order to attain the environmental characteristics promoted by this product, the product invested in sustainable investments even though some investments did not meet all of the detailed criteria for "environmentally sustainable investments" within the meaning of the Taxonomy Regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

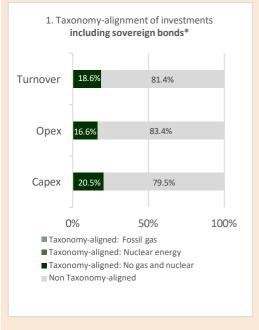

| | Yes: | | |
|---|------|---------------|-------------------|
| | | In fossil gas | In nuclear energy |
| X | No | | |

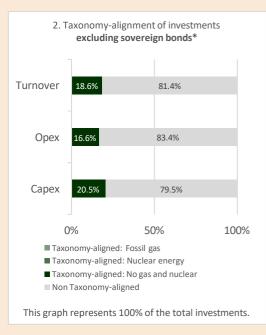

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflects the "greenness" of investee companies today.
- capital
 expenditure
 (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.
- What was the share of investments made in transitional and enabling activities?

Investments in environmentally sustainable economic activities:

| | Transitional | Enabling | |
|------------------|--------------|----------|--|
| As % of Turnover | 0% | 8.4% | |
| As % of Capex | 0.1% | 12.6% | |
| As % of Opex | 0% | 10% | |

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage of investments that were aligned with the EU Taxonomy was 18.6% in the current reference period.

The percentage of investments that were aligned with the EU Taxonomy was 0% in the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The product invested 76.4% of its assets in sustainable investments with environmental characteristics which did not qualify as environmentally sustainable under the EU Taxonomy.

What was the share of socially sustainable investments?

The product invested 0% of its assets in socially sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

5% of investments were not classified as sustainable investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including the exclusion of companies involved with certain controversial activities, and the exclusion of companies that violate, repeatedly and seriously, one or more of the ten principles of the UN Global Compact.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken to achieve the environmental characteristics were:

- The Investment Manager identified companies which operated in the energy transition sector and integrated an analysis of such companies' Environmental, Social and Governance ("ESG") performance into its investment analysis and investment decisions.
- The Investment Manager carried out its own assessment of the environmental performance of companies in which it invested, based on its own research and knowledge of the companies, public information and information (including specialised ESG information) and ratings from external data providers.

- The portfolio construction process excluded holdings deemed inconsistent with the Investment Manager's Responsible Investment Policy or that were involved with certain controversial sectors, as determined by the Investment Manager's Responsible Investing Committee. The product did not invest in any company which is not involved in the energy transition sector. The energy transition sector includes, but is not limited to, solar, wind, biomass, hydro, fuel cells and geothermal energy sectors. Further, the product did not invest in companies involved in certain activities including tobacco manufacturing, coal extraction and coal-fired electricity generation, in excess of certain thresholds.
- The Investment Manager collaborated on 21 topics and engaged with 13 companies on a range of issues, including engagement with companies which had high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact.

How did this financial product perform compared to the reference benchmark? Not applicable

No reference benchmark has been designated for the purpose of attaining the environmental characteristics promoted by the product.

- How does the reference benchmark differ from a broad market index?
 Not Applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
 Not applicable.
- How did this financial product perform compared with the broad market index?
 Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: KBI Water Fund (the "product")

Legal entity identifier: 635400J1NOTKSMNKNU98

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective? Yes No It made **sustainable** It promoted Environmental/Social (E/S) **characteristics** and investments with an while it did not have as its objective a environmental objective: % sustainable investment, it had a proportion of in economic activities that 90.5% of sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in economic Χ activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally with an environmental objective in sustainable under the EU economic activities that do not qualify as environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: ___%

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics promoted by the product were the provision of clean water, sanitation services and irrigation solutions. This was achieved by investing in a portfolio of companies which, in the opinion of the Investment Manager, on an aggregate portfolio basis generate a substantial proportion of their turnover from and operate on a sustainable basis in the water solutions sector.

The Investment Manager used a range of sustainability indicators to measure the extent to which the environmental and social characteristics of the product were met. Investors

Sustainable investment means
an investment in an

economic activity that contributes to an environmental or social objective,

provided that the

that the investee

companies follow

investment does not significantly harm

any environmental or social objective and

should refer to the next section below for an assessment of how the sustainability indicators performed during the reference period.

The product was managed with the aim of progressively reducing net carbon emissions of investee companies and of eventually reaching net zero emissions by 2050. The Investment Manager monitored the carbon intensity of companies in which the product invested. Carbon intensity is a measure of greenhouse gas emissions, in tonnes, relative to the revenue of the company or portfolio. The Investment Manager obtained carbon intensity data from the Data Provider.

The environmental objective to which the sustainable investments contributed was climate change mitigation.

While the product promoted carbon emission reduction and better corporate practices, investors should be aware that this product does not have reduction of carbon emissions as its objective within the meaning of Article 9(3) of SFDR.

The extent of the product's impact is further described in the section below headed "How did this financial product consider principal adverse impacts on sustainability factors?". The proportion of the product that was aligned with the environmental and social characteristics is disclosed under the section below headed "What was the proportion of sustainability-related investments?". The objectives of the sustainable investments are set out under the heading "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The Investment Manager used three indicators to measure the environmental and social characteristics of the product as follows:

- The percentage of revenues earned on an estimated basis by investee companies which are from the water sector.
- The weighted average ESG rating of the product, as determined by the use of ESG ratings of companies, supplied by an external data provider of ESG research and ratings.
- The carbon intensity of the product measured by an external provider of carbon footprint measurement services.

The following shows how each indicator performed during the reference period under review. Each measure was calculated based on the portfolio holdings and relevant metric at the end of the period under review.

| Sustainability Indicator | 2024 | 2023 |
|--|------|--------|
| Percentage (estimated) of revenues earned by | 62% | 60.9% |
| investee companies from the water sector | 02/6 | 00.576 |

...and compared to previous periods?

See table in the section headed "How did the sustainability indicators perform?".

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

This product invests partially in sustainable investments.

The objectives of these sustainable investments are the provision of clean water, sanitation services and irrigation solutions.

The sustainable investments contributed to these objectives, by increasing water supply and access, improving water quality, increasing the availability of arable land through irrigation solutions and reducing water wastage across the industrial, agricultural and household sectors. Please refer to the section above headed "How did the sustainability indicators perform?" for more detail on the indicators used to assess the contribution to the objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments of the product were assessed to ensure that they do not cause significant harm to any environmental or social objective. This assessment made use of Principal Adverse Impact Indicators ("PAI Indicators"), where applicable and where data was sufficiently available, and ensured that certain minimum standards were reached for each applicable PAI Indicator.

The following PAI Indicators were used throughout the period under review.

| PAI Indicator | Explanation | 2024 | 2023 |
|------------------|--|----------------------|----------------------|
| 1. GHG Emissions | Sum of portfolio companies' Carbon Emissions - Scope 1 (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 65,620 tons CO2e | 62,542 tons CO2e |
| 1. GHG Emissions | Sum of portfolio companies' Carbon Emissions - Scope 2 (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 19,609 tons CO2e | 17,482 tons CO2e |
| 1. GHG Emissions | Sum of portfolio companies' Scope 3 - Total Emission Estimated (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 359,436 tons CO2e | 330,973 tons CO2e |

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

| | The total annual Scope 1, Scope 2, and estimated Scope 3 GHG emissions associated with the market | 426 222 : | 440.005 |
|--|--|--|--|
| 1. GHG Emissions | value of the portfolio. Companies' carbon emissions are apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 436,232 tons CO2e | 410,995 tons CO2e |
| 2. Carbon Footprint | Sum of portfolio companies' Total GHG Emissions (Scopes 1, 2 and 3) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash, adjusted to show the emissions associated with 1 million EUR invested in the portfolio. | 341 tons CO2e / million EUR invested | 378 tons CO2e / million EUR invested |
| 3. GHG Intensity of investee companies | The portfolio's weighted average of its holding issuers' GHG Intensity (Scope 1, Scope 2 and estimated Scope 3 GHG emissions/EUR million revenue). | 687 tons CO2e / million EUR sales | 799 tons CO2e / million EUR sales |
| 4. Exposure to companies active in the fossil fuel sector | The percentage of the portfolio's market value exposed to issuers with fossil fuels related activities, including extraction, processing, storage and transportation of petroleum products, natural gas, and thermal and metallurgical coal. | 6.1% | 11% |
| 5. Share of non-renewable energy consumption and production | The portfolio's weighted average of issuers' energy consumption and/or production from non-renewable sources as a percentage of total energy used and/or generated. | 84.5% | 72% |
| 6. Energy consumption intensity per high impact climate sector: a. NACE Code A (Agriculture, Forestry and Fishing) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code A | 0 GWh / million EUR revenue | 0 GWh / million EUR revenue |
| b. NACE Code B (Mining and Quarrying) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code B | 0 GWh / million EUR revenue | 0 GWh / million EUR revenue |
| c. NACE Code C (Manufacturing) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code C | 0.13 GWh / million EUR revenue | 0.12 GWh / million EUR revenue |
| d. NACE Code D (Electricity, Gas, Steam and Air Conditioning Supply) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code D | 0.35 GWh / million EUR revenue | 0.74 GWh / million EUR revenue |
| e. NACE Code E (Water Supply, Sewerage, Waste Management and Remediation Activities) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code E | 0.95 GWh / million EUR revenue | 1.36 GWh / million EUR revenue |
| f. NACE Code F (Construction) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code F | 0.14 GWh / million EUR revenue | 0.24 GWh / million EUR revenue |
| g. NACE Code G (Wholesale and Retail Trade Repair of Motor Vehicles and Motorcycles) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code G | 0.04 GWh / million EUR revenue | 0.05 GWh / million EUR revenue |
| h. NACE Code H (Transportation and Storage) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code H | 0 GWh / million EUR revenue | 0 GWh / million EUR revenue |
| i. NACE Code L (Real estate activities) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code L | 0 GWh / million EUR revenue | 0 GWh / million EUR revenue |

| 7. Activities negatively affecting biodiversity-sensitive areas | The percentage of the portfolio's market value exposed to issuers' that reported having operations in or near biodiversity sensitive areas and have been implicated in controversies with severe or very severe impacts on the environment. | 0% | 0% |
|---|---|---|---|
| 8. Emissions to Water | The total annual wastewater discharged (metric tons reported) into surface waters as a result of industrial or manufacturing activities associated with 1 million EUR invested in the portfolio. Companies' water emissions are apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 0.05 metric tons / million EUR invested | 0 metric tons / million EUR invested |
| 9. Hazardous waste ratio | The total annual hazardous waste (metric tons reported) associated with 1 million EUR invested in the portfolio. Companies' hazardous waste is apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 0.63 metric tons / million EUR invested | 1.14 metric tons / million EUR invested |
| 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers with very severe controversies related to the company's operations and/or products. | 0% | 0% |
| 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers that have at least one policy covering some of the UNGC principles or OECD Guidelines for Multinational Enterprises and either a monitoring system evaluating compliance with such policy or a grievance/complaints handling mechanism. | 0% | 53.5% |
| 12. Unadjusted gender pay gap | The portfolio holdings' weighted average of the difference between the average gross hourly earnings of male and female employees, as a percentage of male gross earnings. | 14.4% | 6.1% |
| 13. Board gender diversity | The portfolio holdings' weighted average of the percentage of board members who are female. For companies with a two-tier board, the calculation is based on members of the Supervisory Board only. | 38.8% | 37.9% |
| 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | The percentage of the portfolio's market value exposed to issuers with an industry tie to landmines, cluster munitions, chemical weapons or biological weapons. Note: Industry ties includes ownership, manufacturing and investments. Ties to landmines do not include related safety products. | 0% | 0% |
| 15. Investments in companies without carbon emission reduction initiatives | The percentage of the portfolio's market value exposed to issuers without a carbon emissions reduction target. | 36.2% | 37.6% |
| 16. Investments in companies without workplace accident prevention policies | The percentage of the portfolio's market value exposed to issuers without a workplace accident prevention policy. | 2.1% | 1.3% |

Note that in the PAI Indicators table above, for items 6a to 6i, there may be no investments in companies in the relevant NACE sector or there may be no data available for any companies in the relevant NACE sector. In such cases the table will show a value of 0 GWh / million EUR revenue.

How were the indicators for adverse impacts on sustainability factors taken into account?

The indicators for adverse impacts on sustainability factors were taken into account by applying certain exclusion strategies aligned to the PAI Indicators and by monitoring the PAI Indicators in the following manner:

- 1. When ensuring that a sustainable investment did not cause significant harm to any environmental or social objective, the Investment Manager made use of various PAI Indicators. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail. The Investment Manager ensured that certain minimum standards were reached for each applicable PAI Indicator.
- 2. The product did not invest in companies materially engaged in certain activities which, in the opinion of the Investment Manager, are associated with a particularly adverse impact on sustainability. These included companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, companies with a high degree of involvement in coal extraction or coal-fired electricity generation, and companies with material revenues from fracking, for-profit prisons, civilian firearms and ammunition, weapons and weapons systems, and the production of nuclear weapons.
- 3. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact. Please refer to the section below headed "What actions have been taken to meet the environmental and/or social characteristics during the reference period?" for more detail.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, the sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights through the use of environmental and UNGC (UN Global Compact) controversies screening as an indication for alignment with OECD guidelines / UN guiding principles along with other tools including ESG scores and research as part of the investment.

The product did not invest in any company which violates, repeatedly and seriously, one or more of the ten principles of the UN Global Compact. To implement this, the Investment Manager used data from data providers which rely on international conventions such as the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, as sources of data to determine risk exposure of companies' geographies of operation and business segments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Over the reference period, the product considered principal adverse impacts on sustainability factors. This was done in the following manner:

- 1. A minimum proportion of the investments held in this product must be sustainable investments. In determining whether an investment was a sustainable investment, a number of PAI Indicators were used and where the adverse impact was considered to be excessive, in the judgement of the Investment Manager, based on whether the adverse impact breaches certain thresholds set by the Investment Manager, such investments were not deemed to be sustainable investments. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail.
- The Investment Manager's decision on whether to make an investment in a company, and the size of that investment, took into account the PAI Indicators (referred to above) relating to the social, environmental and governance characteristics of that company, including the adverse impact that the company had on sustainability.
- 3. The product did not invest in companies engaged in certain activities which, in the opinion of the Investment Manager, were associated with a particularly adverse impact on sustainability, in excess of certain thresholds. These included

companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, companies with a high degree of involvement in coal extraction or coal-fired electricity generation, and companies with material revenues from fracking, for-profit prisons, civilian firearms and ammunition, weapons and weapons systems, and the production of nuclear weapons.

4. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact, with a view to influencing the company to change its activities in a manner which will reduce the adverse impact.

What were the top investments of this financial product?

The following sets out a list of the top investments (and relevant sector) of the financial product using the Global Industry Classification Standard (GICS). GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure.

The data presented in this section shows the top 15 investments (ie the greatest proportion of investments of the product) during the reference period and has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments (which were not used to promote the environmental and social characteristics of the product) are not included in the table below.

| Largest Investments | Sector | % Assets | Country |

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 year to end August 2024

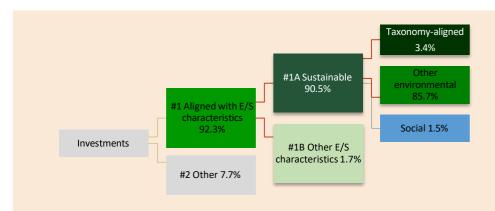

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets. Information on the proportion of the product which promoted environmental/social characteristics and the proportion of the product invested in sustainable investments during the reference period is provided below.

What was the asset allocation?

Based on data as at 31 August 2024, 92.3% of the investments of the product were used to meet the environmental and social characteristics promoted by the product in accordance with the binding elements of the investment strategy. The proportion of the portfolio which was invested in Sustainable Investments was 90.5%.

The remaining portion of investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including ESG-related exclusions.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#20ther includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In the previous reference period, the proportion of the product's assets invested in environmentally sustainable activities was 80.5%. It should be noted that in this reference period only a minority of investee companies are required to report the proportion of their revenues that are aligned with the EU Taxonomy.

Proportion of investments contributing to EU Taxonomy objectives:

| | Climate change mitigation | Climate change adaptation |
|------------------|---------------------------|---------------------------|
| As % of Turnover | 2.7% | 0% |
| As % of Capex | 0.9% | 0% |

In which economic sectors were the investments made?

The following table consists of the product's exposure to sub-industries. For the purpose of the table, the Global Industry Classification Standard (GICS) has been used. GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure. The table below shows the composition of the investments held by the product, by GICS sector during the reference period. The data presented has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments are not included in the table below.

| Sector | % Assets |
|---|----------|
| COMMUNICATION SERVICES | 0 |
| CONSUMER DISCRETIONARY | 2.2 |
| CONSUMER STAPLES | 0 |
| ENERGY | 0 |
| FINANCIALS | 0 |
| HEALTH CARE | 0 |
| INDUSTRIALS | 49.5 |
| INFORMATION TECHNOLOGY | 8.3 |
| MATERIALS | 3.5 |
| REAL ESTATE | 0 |
| UTILITIES | 33.4 |
| Note: EXPOSURE TO COMPANIES ACTIVE IN THE FOSSIL FUEL SECTOR (i.e. the percentage of the product's market value exposed to issuers with fossil fuels related activities, including extraction, processing, storage and transportation of petroleum products, natural gas, and thermal and metallurgical coal) | 6.1% |

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of sustainable investments aligned with the EU Taxonomy was 3.4%.

The environmental objective to which the sustainable investments contributed was climate change mitigation.

In order to attain the environmental characteristics promoted by this product, the product invested in sustainable investments even though some investments did not meet all of the detailed criteria for "environmentally sustainable investments" within the meaning of the Taxonomy Regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

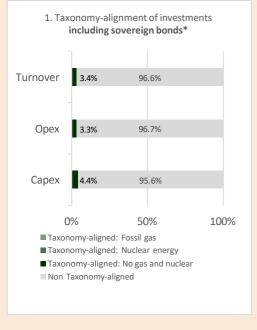

| | Yes: | | |
|---|------|---------------|-------------------|
| | | In fossil gas | In nuclear energy |
| X | No | | |

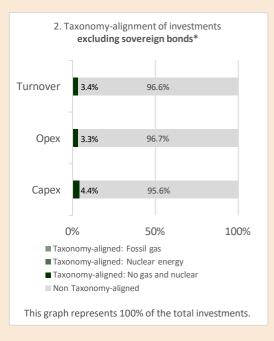

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflects the "greenness" of investee companies today.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.
- What was the share of investments made in transitional and enabling activities?

Investments in environmentally sustainable economic activities:

| | Transitional | Enabling |
|------------------|--------------|----------|
| As % of Turnover | 0% | 1% |
| As % of Capex | 0.2% | 0.6% |
| As % of Opex | 0.1% | 0.8% |

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage of investments that were aligned with the EU Taxonomy was 3.4% in the current reference period.

The percentage of investments that were aligned with the EU Taxonomy was 0% in the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The product invested 85.7% of its assets in sustainable investments with environmental characteristics which did not qualify as environmentally sustainable under the EU Taxonomy.

What was the share of socially sustainable investments?

The product invested 1.5% of its assets in socially sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

9.5% of investments were not classified as sustainable investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including the exclusion of companies involved with certain controversial activities, and the exclusion of companies that violate, repeatedly and seriously, one or more of the ten principles of the UN Global Compact.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken to achieve the environmental and social characteristics were:

- The Investment Manager identified companies which operated in the water sector and integrated an analysis of such companies' Environmental, Social and Governance ("ESG") performance into its investment analysis and investment decisions.
- The Investment Manager carried out its own assessment of the environmental performance of companies in which it invested, based on its own research and knowledge of the companies, public information and information (including specialised ESG information) and ratings from external data providers.

- The portfolio construction process excluded holdings deemed inconsistent with the Investment Manager's Responsible Investment Policy or that were involved with certain controversial sectors, as determined by the Investment Manager's Responsible Investing Committee. The product did not invest in any company which is not involved in the water sector. The water sector includes, but is not limited to water supply and access, improving water quality, increasing the availability of arable land through irrigation solutions and reducing water wastage across the industrial, agricultural and household sectors (but excludes the consumer bottled water sector). Further, the product did not invest in companies involved in certain activities including tobacco manufacturing, coal extraction and coal-fired electricity generation, in excess of certain thresholds.
- The Investment Manager collaborated on 21 topics and engaged with 13 companies on a range of issues, including engagement with companies which had high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact.

How did this financial product perform compared to the reference benchmark? Not applicable

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the product.

- How does the reference benchmark differ from a broad market index?
 Not Applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
 Not applicable.
- How did this financial product perform compared with the broad market index?
 Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: KBI Emerging Markets Equity Fund (the "product")

Legal entity identifier: 635400SILGSJVHNYFH80

Environmental and/or social characteristics

| Did this financial | Did this financial product have a sustainable investment objective? | | | | |
|---|---|---|--------------------------|--|--|
| • • Yes | | • | × | No | |

an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Sustainable

investment means

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a

does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics promoted by the product were reductions in harm to the environment and climate arising from the emissions of greenhouse gases and better corporate practices that contribute to a more just society by, for example, enhancing human capital or providing improved social opportunities to services such as finance, health care, and communications. The Investment Manager used a range of sustainability indicators to measure the extent to which the environmental and social characteristics of

the product were met. Investors should refer to the next section below for an assessment of how the sustainability indicators performed during the reference period.

The product was managed with the aim of progressively reducing net carbon emissions of investee companies and of eventually reaching net zero emissions by 2050. The product also sought to have a carbon intensity level lower than the Index. The Investment Manager monitored the carbon intensity of companies in which the product invested. Carbon intensity is a measure of greenhouse gas emissions, in tonnes, relative to the revenue of the company or portfolio. The Investment Manager obtained carbon intensity data from the Data Provider.

While the product promotes carbon emission reduction and better corporate practices, investors should be aware that this product does not have reduction of carbon emissions as its objective within the meaning of Article 9(3) of SFDR. Further, the investment strategy of the product is not continuously aligned with the Index and the Index is not used for the purpose of determining the attainment of the environmental and social characteristics promoted by the product. The Index is a broad market index and is not aligned with the environmental and social characteristics promoted by the product.

The extent of the product's impact is further described in the section below headed "How did this financial product consider principal adverse impacts on sustainability factors?". The proportion of the product that was aligned with the environmental and social characteristics is disclosed under the section below headed "What was the proportion of sustainability-related investments?". The objectives of the sustainable investments are set out under the heading "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The Investment Manager used two indicators to measure the environmental and social characteristics of the product as follows:

- The weighted average ESG rating of the product, as determined by the use of ESG ratings of companies, supplied by an external data provider of ESG research and ratings.
- The carbon intensity of the product measured by an external provider of carbon footprint measurement services.

The following shows how each indicator performed during the reference period under review. Each measure was calculated based on the portfolio holdings and relevant metric at the end of the period under review.

| Sustainability Indicator | 2024 | 2023 |
|--|------|------|
| Weighted Average MSCI ESG Score of the portfolio | 6.1 | 6.2 |

...and compared to previous periods?

See table in the section headed "How did the sustainability indicators perform?".

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

This product invests partially in sustainable investments.

The objectives of these sustainable investments are the the reduction in harm to the environment and climate arising from the emissions of greenhouse gases and better corporate practices that contribute to a more just society by, for example, enhancing human capital or providing improved social opportunities to services such as finance, health care, and communications.

The sustainable investments contributed to these objectives through the reduction in the carbon intensity of the portfolio and through the promotion of improved corporate practices that contribute to a more just society. Please refer to the section above headed "How did the sustainability indicators perform?" for more detail on the indicators used to assess the contribution to the objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments of the product were assessed to ensure that they do not cause significant harm to any environmental or social objective. This assessment made use of Principal Adverse Impact Indicators ("PAI Indicators"), where applicable and where data was sufficiently available, and ensured that certain minimum standards were reached for each applicable PAI Indicator.

The following PAI Indicators were used throughout the period under review.

| PAI Indicator | Explanation | 2024 | 2023 |
|------------------|---|--------------------|--------------------|
| 1. GHG Emissions | Sum of portfolio companies' Carbon Emissions - Scope 1 (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 1,440 tons CO2e | 1,305 tons CO2e |
| 1. GHG Emissions | Sum of portfolio companies' Carbon Emissions - Scope 2 (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 699 tons CO2e | 753 tons CO2e |

| 1. GHG Emissions | Sum of portfolio companies' Scope 3 - Total Emission Estimated (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 18,001 tons CO2e | 16,768 tons CO2e |
|--|--|--|--|
| 1. GHG Emissions | The total annual Scope 1, Scope 2, and estimated Scope 3 GHG emissions associated with the market value of the portfolio. Companies' carbon emissions are apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 19,557 tons CO2e | 18,850 tons CO2e |
| 2. Carbon Footprint | Sum of portfolio companies' Total GHG Emissions (Scopes 1, 2 and 3) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash, adjusted to show the emissions associated with 1 million EUR invested in the portfolio. | 953 tons CO2e / million EUR invested | 781 tons CO2e / million EUR invested |
| 3. GHG Intensity of investee companies | The portfolio's weighted average of its holding issuers' GHG Intensity (Scope 1, Scope 2 and estimated Scope 3 GHG emissions/EUR million revenue). | 1,309 tons CO2e / million EUR sales | 1,022 tons CO2e / million EUR sales |
| 4. Exposure to companies active in the fossil fuel sector | The percentage of the portfolio's market value exposed to issuers with fossil fuels related activities, including extraction, processing, storage and transportation of petroleum products, natural gas, and thermal and metallurgical coal. | 10.8% | 9.8% |
| 5. Share of non- renewable energy consumption and production | The portfolio's weighted average of issuers' energy consumption and/or production from non-renewable sources as a percentage of total energy used and/or generated. | 83.9% | 80.4% |
| 6. Energy consumption intensity per high impact climate sector: a. NACE Code A (Agriculture, Forestry and Fishing) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code A | 1.84 GWh / million EUR revenue | 0 GWh / million EUR revenue |
| b. NACE Code B (Mining and Quarrying) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code B | 1.09 GWh / million EUR revenue | 1 GWh / million EUR revenue |
| c. NACE Code C (Manufacturing) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code C | 0.43 GWh / million EUR revenue | 2.85 GWh / million EUR revenue |
| d. NACE Code D (Electricity, Gas, Steam and Air Conditioning Supply) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code D | 0.22 GWh / million EUR revenue | 0.16 GWh / million EUR revenue |
| e. NACE Code E (Water Supply, Sewerage, Waste Management and Remediation Activities) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code E | 0 GWh / million EUR revenue | 0 GWh / million EUR revenue |
| f. NACE Code F (Construction) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code F | 0.06 GWh / million EUR revenue | 0.02 GWh / million EUR revenue |

| g. NACE Code G (Wholesale and Retail Trade Repair of Motor Vehicles and Motorcycles) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code G | 0.05 GWh / million EUR revenue | 0.14 GWh / million EUR revenue |
|---|---|---|--|
| h. NACE Code H (Transportation and Storage) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code H | 0.69 GWh / million EUR revenue | 0.69 GWh / million EUR revenue |
| i. NACE Code L (Real estate activities) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code L | 0.13 GWh / million EUR revenue | 0.16 GWh / million EUR revenue |
| 7. Activities negatively affecting biodiversity-sensitive areas | The percentage of the portfolio's market value exposed to issuers' that reported having operations in or near biodiversity sensitive areas and have been implicated in controversies with severe or very severe impacts on the environment. | 1.7% | 0.9% |
| 8. Emissions to Water | The total annual wastewater discharged (metric tons reported) into surface waters as a result of industrial or manufacturing activities associated with 1 million EUR invested in the portfolio. Companies' water emissions are apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 0 metric tons / million EUR invested | 0 metric tons / million EUR invested |
| 9. Hazardous waste ratio | The total annual hazardous waste (metric tons reported) associated with 1 million EUR invested in the portfolio. Companies' hazardous waste is apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 0.98 metric tons / million EUR invested | 0.8 metric tons / million EUR invested |
| 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers with very severe controversies related to the company's operations and/or products. | 2.4% | 1.2% |
| 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers that have at least one policy covering some of the UNGC principles or OECD Guidelines for Multinational Enterprises and either a monitoring system evaluating compliance with such policy or a grievance/complaints handling mechanism. | 2% | 69.8% |
| 12. Unadjusted gender pay gap | The portfolio holdings' weighted average of the difference between the average gross hourly earnings of male and female employees, as a percentage of male gross earnings. | 17.8% | 22.6% |
| 13. Board gender diversity | The portfolio holdings' weighted average of the percentage of board members who are female. For companies with a two-tier board, the calculation is based on members of the Supervisory Board only. | 19.6% | 18.3% |

| 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | The percentage of the portfolio's market value exposed to issuers with an industry tie to landmines, cluster munitions, chemical weapons or biological weapons. Note: Industry ties includes ownership, manufacturing and investments. Ties to landmines do not include related safety products. | 0% | 0% |
|--|--|-------|-------|
| 15. Investments in companies without carbon emission reduction initiatives | The percentage of the portfolio's market value exposed to issuers without a carbon emissions reduction target. | 61% | 46.3% |
| 16. Investments in companies without workplace accident prevention policies | The percentage of the portfolio's market value exposed to issuers without a workplace accident prevention policy. | 15.7% | 25.9% |

Note that in the PAI Indicators table above, for items 6a to 6i, there may be no investments in companies in the relevant NACE sector or there may be no data available for any companies in the relevant NACE sector. In such cases the table will show a value of 0 GWh / million EUR revenue.

How were the indicators for adverse impacts on sustainability factors taken into account?

The indicators for adverse impacts on sustainability factors were taken into account by applying certain exclusion strategies aligned to the PAI Indicators and by monitoring the PAI Indicators in the following manner:

- 1. When ensuring that a sustainable investment did not cause significant harm to any environmental or social objective, the Investment Manager made use of various PAI Indicators. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail. The Investment Manager ensured that certain minimum standards were reached for each applicable PAI Indicator.
- 2. The product did not invest in companies materially engaged in certain activities which, in the opinion of the Investment Manager, are associated with a particularly adverse impact on sustainability. These included companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, and companies with a high degree of involvement in coal extraction or coal-fired electricity generation.
- 3. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact. Please refer to the section below headed "What actions have been taken to meet the

environmental and/or social characteristics during the reference period?" for more detail.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, the sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights through the use of environmental and UNGC (UN Global Compact) controversies screening as an indication for alignment with OECD guidelines / UN guiding principles along with other tools including ESG scores and research as part of the investment.

The product did not invest in any company which violates, repeatedly and seriously, one or more of the ten principles of the UN Global Compact. To implement this, the Investment Manager used data from data providers which rely on international conventions such as the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, as sources of data to determine risk exposure of companies' geographies of operation and business segments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Over the reference period, the product considered principal adverse impacts on sustainability factors. This was done in the following manner:

1. A minimum proportion of the investments held in this product must be sustainable investments. In determining whether an investment was a sustainable investment, a number of PAI Indicators were used and where the adverse impact was considered to be excessive, in the judgement of the Investment Manager, based on whether the adverse impact breaches certain

thresholds set by the Investment Manager, such investments were not deemed to be sustainable investments. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail.

- The Investment Manager's decision on whether to make an investment in a
 company, and the size of that investment, took into account the PAI Indicators
 (referred to above) relating to the social, environmental and governance
 characteristics of that company, including the adverse impact that the company
 had on sustainability.
- 3. The product did not invest in companies engaged in certain activities which, in the opinion of the Investment Manager, were associated with a particularly adverse impact on sustainability, in excess of certain thresholds. These included companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, and companies with a high degree of involvement in coal extraction or coal-fired electricity generation.
- 4. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact, with a view to influencing the company to change its activities in a manner which will reduce the adverse impact.

What were the top investments of this financial product?

The following sets out a list of the top investments (and relevant sector) of the financial product using the Global Industry Classification Standard (GICS). GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure.

The data presented in this section shows the top 15 investments (ie the greatest proportion of investments of the product) during the reference period and has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments (which were not used to promote the environmental and social characteristics of the product) are not included in the table below.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 year to end August 2024

| Largest Investments | Sector | % Assets | Country |

What was the proportion of sustainability-related investments?

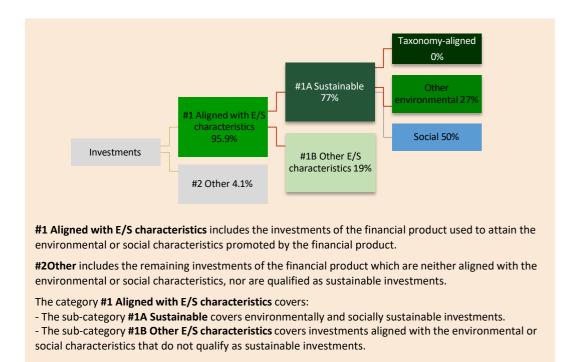

Information on the proportion of the product which promoted environmental/social characteristics and the proportion of the product invested in sustainable investments during the reference period is provided below.

What was the asset allocation?

Based on data as at 31 August 2024, 95.9% of the investments of the product were used to meet the environmental and social characteristics promoted by the product in accordance with the binding elements of the investment strategy. The proportion of the portfolio which was invested in Sustainable Investments was 77%.

Asset allocation describes the share of investments in specific assets.

The remaining portion of investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including ESG-related exclusions.

In the previous reference period, the proportion of the product's assets invested in environmentally sustainable activities was 25%. It should be noted that in this reference period only a minority of investee companies are required to report the proportion of their revenues that are aligned with the EU Taxonomy.

In which economic sectors were the investments made?

The following table consists of the product's exposure to sub-industries. For the purpose of the table, the Global Industry Classification Standard (GICS) has been used. GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure. The table below shows the composition of the investments held by the product, by GICS sector during the reference period. The data presented has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments are not included in the table below.

| Sector | % Assets |
|------------------------|----------|
| COMMUNICATION SERVICES | 8.8 |

| UTILITIES | 3.5 |
| | |
| Note: EXPOSURE TO COMPANIES ACTIVE IN THE FOSSIL FUEL | |
| SECTOR (i.e. the percentage of the product's market value | |
| exposed to issuers with fossil fuels related activities, including | 10.8% |
| extraction, processing, storage and transportation of petroleum | |
| products, natural gas, and thermal and metallurgical coal) | |

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of sustainable investments aligned with the EU Taxonomy was 0%.

In order to attain the environmental characteristics promoted by this product, the product invested in sustainable investments even though such investments did not meet all of the detailed criteria for "environmentally sustainable investments" within the meaning of the Taxonomy Regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

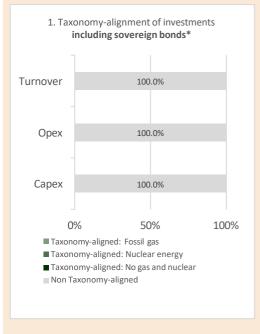

| | Yes: | | |
|---|------|---------------|-------------------|
| | | In fossil gas | In nuclear energy |
| X | No | | |

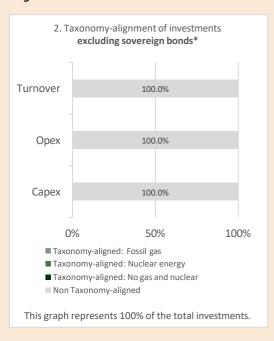

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflects the "greenness" of investee companies today.
- capital
 expenditure
 (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.
- What was the share of investments made in transitional and enabling activities?

The share of investments in transitional activities was 0% of the product's assets.

The share of investments in enabling activities was 0% of the product's assets.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage of investments that were aligned with the EU Taxonomy was 0% in the current reference period.

The percentage of investments that were aligned with the EU Taxonomy was 0% in the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The product invested 27% of its assets in sustainable investments with environmental characteristics which did not qualify as environmentally sustainable under the EU Taxonomy.

are
sustainable
investments with an
environmental
objective that do
not take into
account the criteria
for environmentally
sustainable
economic activities
under Regulation
(EU) 2020/852.

What was the share of socially sustainable investments?

The product invested 50% of its assets in socially sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

23% of investments were not classified as sustainable investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including the exclusion of companies involved with certain controversial activities, and the exclusion of companies that violate, repeatedly and seriously, one or more of the ten principles of the UN Global Compact.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken to achieve the environmental and social characteristics were:

- The Investment Manager integrated an analysis of companies' ESG performance into its investment analysis and investment decisions. Companies were rated on an AAA-CCC scale relative to the standards and performance of their industry peers, which was then translated into an ESG score. The Investment Manager got a single ESG score for each stock from MSCI ESG Research (the "Data Provider"), each stock receiving a score of between 0 and 10, with the highest scoring company receiving a 10. The Investment Manager favoured higher score stocks where possible and its aim was for the portfolio to have an equal or higher weighted ESG score than its comparable benchmark.
- The portfolio construction process excluded holdings deemed inconsistent with the Investment Manager's Responsible Investment Policy or that were involved with certain controversial sectors, as determined by the Investment Manager's Responsible Investing Committee. Further, the product did not invest in companies involved in certain activities including tobacco manufacturing, coal extraction and coal-fired electricity generation, in excess of certain thresholds.
- The Investment Manager engaged on 21 issues, including engagement on issues with high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing companies to change its activities in a manner which will reduce the adverse impact.

How did this financial product perform compared to the reference benchmark? Not applicable

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the product.

- How does the reference benchmark differ from a broad market index?
 Not Applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
 Not applicable.
- How did this financial product perform compared with the broad market index?
 Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: KBI Developed Equity Fund (the "product")

Legal entity identifier: 635400LHO3CTQNI6T622

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective? Yes No It made **sustainable** It promoted Environmental/Social (E/S) **characteristics** and investments with an while it did not have as its objective a environmental objective: ___% sustainable investment, it had a proportion of in economic activities that 88.9% of sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in economic Χ activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally with an environmental objective in sustainable under the EU economic activities that do not qualify as environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: ___%

Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment means
an investment in an

economic activity that contributes to an environmental or social objective,

provided that the

investment does not significantly harm

any environmental or social objective and

that the investee

companies follow

good governance

The **EU Taxonomy** is

system laid down in

establishing a list of

economic activities.

2020/852,

sustainable

practices.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics promoted by the product were reductions in harm to the environment and climate arising from the emissions of greenhouse gases and better corporate practices that contribute to a more just society, by, for example, enhancing human capital or providing improved social opportunities to services such as finance, health care, and communications.

The Investment Manager used a range of sustainability indicators to measure the extent to which the environmental and social characteristics of the product were met. Investors

should refer to the next section below for an assessment of how the sustainability indicators performed during the reference period.

The product was managed with the aim of progressively reducing net carbon emissions of investee companies and of eventually reaching net zero emissions by 2050. The product also sought to have a carbon intensity level lower than the Index. The Investment Manager monitored the carbon intensity of companies in which the product invested. Carbon intensity is a measure of greenhouse gas emissions, in tonnes, relative to the revenue of the company or portfolio. The Investment Manager obtained carbon intensity data from the Data Provider.

The environmental objective to which the sustainable investments contributed was climate change mitigation.

While the product promotes carbon emission reduction and better corporate practices, investors should be aware that this product does not have reduction of carbon emissions as its objective within the meaning of Article 9(3) of SFDR. Further, the investment strategy of the product is not continuously aligned with the Index and the Index is not used for the purpose of determining the attainment of the environmental and social characteristics promoted by the product. The Index is a broad market index and is not aligned with the environmental and social characteristics promoted by the product.

The extent of the product's impact is further described in the section below headed "How did this financial product consider principal adverse impacts on sustainability factors?". The proportion of the product that was aligned with the environmental and social characteristics is disclosed under the section below headed "What was the proportion of sustainability-related investments?". The objectives of the sustainable investments are set out under the heading "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability
indicators measure
how the
environmental or
social
characteristics
promoted by the
financial product
are attained.

How did the sustainability indicators perform?

The Investment Manager used two indicators to measure the environmental and social characteristics of the product as follows:

- The weighted average ESG rating of the product, as determined by the use of ESG ratings of companies, supplied by an external data provider of ESG research and ratings.
- The carbon intensity of the product measured by an external provider of carbon footprint measurement services.

The following shows how each indicator performed during the reference period under review. Each measure was calculated based on the portfolio holdings and relevant metric at the end of the period under review.

| Sustainability Indicator | 2024 | 2023 |
|--|---------------------------------------|------------------------------------|
| Weighted Average MSCI ESG Score of the portfolio | 7.3 | 7.8 |
| Weighted Average Carbon Intensity of the portfolio | 58.9 tons CO2e / million USD sales | 69.3 tons CO2e / million USD sales |

...and compared to previous periods?

See table in the section headed "How did the sustainability indicators perform?".

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

This product invests partially in sustainable investments.

The objectives of these sustainable investments are the the reduction in harm to the environment and climate arising from the emissions of greenhouse gases and better corporate practices that contribute to a more just society by, for example, enhancing human capital or providing improved social opportunities to services such as finance, health care, and communications

The sustainable investments contribute to these objectives through the reduction in the carbon intensity of the portfolio and through the promotion of improved corporate practices that contribute to a more just society. Please refer to the section above headed "How did the sustainability indicators perform?" for more detail on the indicators used to assess the contribution to the objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments of the product were assessed to ensure that they do not cause significant harm to any environmental or social objective. This assessment made use of Principal Adverse Impact Indicators ("PAI Indicators"), where applicable and where data was sufficiently available, and ensured that certain minimum standards were reached for each applicable PAI Indicator.

The following PAI Indicators were used throughout the period under review.

| PAI Indicator | Explanation | 2024 | 2023 |
|------------------|---|---------------------|---------------------|
| 1. GHG Emissions | Sum of portfolio companies' Carbon Emissions - Scope 1 (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 16,793 tons CO2e | 24,941 tons CO2e |
| 1. GHG Emissions | Sum of portfolio companies' Carbon Emissions - Scope 2 (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 5,128 tons CO2e | 7,364 tons CO2e |

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

| 1. GHG Emissions | Sum of portfolio companies' Scope 3 - Total Emission Estimated (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 264,446 tons CO2e | 361,294 tons CO2e |
|--|--|--|--|
| 1. GHG Emissions | The total annual Scope 1, Scope 2, and estimated Scope 3 GHG emissions associated with the market value of the portfolio. Companies' carbon emissions are apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 289,045 tons CO2e | 393,734 tons CO2e |
| 2. Carbon Footprint | Sum of portfolio companies' Total GHG Emissions (Scopes 1, 2 and 3) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash, adjusted to show the emissions associated with 1 million EUR invested in the portfolio. | 701 tons CO2e / million EUR invested | 827 tons CO2e / million EUR invested |
| 3. GHG Intensity of investee companies | The portfolio's weighted average of its holding issuers' GHG Intensity (Scope 1, Scope 2 and estimated Scope 3 GHG emissions/EUR million revenue). | 765 tons CO2e / million EUR sales | 861 tons CO2e / million EUR sales |
| 4. Exposure to companies active in the fossil fuel sector | The percentage of the portfolio's market value exposed to issuers with fossil fuels related activities, including extraction, processing, storage and transportation of petroleum products, natural gas, and thermal and metallurgical coal. | 9.2% | 11.5% |
| 5. Share of non- renewable energy consumption and production | The portfolio's weighted average of issuers' energy consumption and/or production from non-renewable sources as a percentage of total energy used and/or generated. | 71.8% | 66.4% |
| 6. Energy consumption intensity per high impact climate sector: a. NACE Code A (Agriculture, Forestry and Fishing) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code A | 0 GWh / million EUR revenue | 0 GWh / million EUR revenue |
| b. NACE Code B (Mining and Quarrying) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code B | 1.04 GWh / million EUR revenue | 1.48 GWh / million EUR revenue |
| c. NACE Code C (Manufacturing) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code C | 0.39 GWh / million EUR revenue | 0.41 GWh / million EUR revenue |
| d. NACE Code D (Electricity, Gas, Steam and Air Conditioning Supply) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code D | 1.79 GWh / million EUR revenue | 2.2 GWh / million EUR revenue |
| e. NACE Code E (Water Supply, Sewerage, Waste Management and Remediation Activities) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code E | 0 GWh / million EUR revenue | 0 GWh / million EUR revenue |
| f. NACE Code F (Construction) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code F | 0.06 GWh / million EUR revenue | 0.06 GWh / million EUR revenue |

| g. NACE Code G (Wholesale and Retail Trade Repair of Motor Vehicles and Motorcycles) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code G | 0.16 GWh / million EUR revenue | 0.11 GWh / million EUR revenue |
|---|---|---|---|
| h. NACE Code H (Transportation and Storage) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code H | 0.26 GWh / million EUR revenue | 0.49 GWh / million EUR revenue |
| i. NACE Code L (Real estate activities) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code L | 0.35 GWh / million EUR revenue | 0.32 GWh / million EUR revenue |
| 7. Activities negatively affecting biodiversity-sensitive areas | The percentage of the portfolio's market value exposed to issuers' that reported having operations in or near biodiversity sensitive areas and have been implicated in controversies with severe or very severe impacts on the environment. | 0% | 0% |
| 8. Emissions to Water | The total annual wastewater discharged (metric tons reported) into surface waters as a result of industrial or manufacturing activities associated with 1 million EUR invested in the portfolio. Companies' water emissions are apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 0.15 metric tons / million EUR invested | 0.04 metric tons / million EUR invested |
| 9. Hazardous waste ratio | The total annual hazardous waste (metric tons reported) associated with 1 million EUR invested in the portfolio. Companies' hazardous waste is apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 0.71 metric tons / million EUR invested | 1.1 metric tons / million EUR invested |
| 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers with very severe controversies related to the company's operations and/or products. | 0% | 0.4% |
| 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers that have at least one policy covering some of the UNGC principles or OECD Guidelines for Multinational Enterprises and either a monitoring system evaluating compliance with such policy or a grievance/complaints handling mechanism. | 0.6% | 38.7% |
| 12. Unadjusted gender pay gap | The portfolio holdings' weighted average of the difference between the average gross hourly earnings of male and female employees, as a percentage of male gross earnings. | 15.4% | 14.4% |
| 13. Board gender diversity | The portfolio holdings' weighted average of the percentage of board members who are female. For companies with a two-tier board, the calculation is based on members of the Supervisory Board only. | 37% | 36.7% |

| 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | The percentage of the portfolio's market value exposed to issuers with an industry tie to landmines, cluster munitions, chemical weapons or biological weapons. Note: Industry ties includes ownership, manufacturing and investments. Ties to landmines do not include related safety products. | 0% | 0% |
|--|--|-------|-------|
| 15. Investments in companies without carbon emission reduction initiatives | The percentage of the portfolio's market value exposed to issuers without a carbon emissions reduction target. | 44.3% | 26.5% |
| 16. Investments in companies without workplace accident prevention policies | The percentage of the portfolio's market value exposed to issuers without a workplace accident prevention policy. | 1.5% | 2.8% |

Note that in the PAI Indicators table above, for items 6a to 6i, there may be no investments in companies in the relevant NACE sector or there may be no data available for any companies in the relevant NACE sector. In such cases the table will show a value of 0 GWh / million EUR revenue.

How were the indicators for adverse impacts on sustainability factors taken into account?

The indicators for adverse impacts on sustainability factors were taken into account by applying certain exclusion strategies aligned to the PAI Indicators and by monitoring the PAI Indicators in the following manner:

- 1. When ensuring that a sustainable investment did not cause significant harm to any environmental or social objective, the Investment Manager made use of various PAI Indicators. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail. The Investment Manager ensured that certain minimum standards were reached for each applicable PAI Indicator.
- 2. The product did not invest in companies materially engaged in certain activities which, in the opinion of the Investment Manager, are associated with a particularly adverse impact on sustainability. These included companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, and companies with a high degree of involvement in coal extraction or coal-fired electricity generation.
- 3. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact. Please refer to the section below headed "What actions have been taken to meet the

environmental and/or social characteristics during the reference period?" for more detail.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, the sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights through the use of environmental and UNGC (UN Global Compact) controversies screening as an indication for alignment with OECD guidelines / UN guiding principles along with other tools including ESG scores and research as part of the investment.

The product did not invest in any company which violates, repeatedly and seriously, one or more of the ten principles of the UN Global Compact. To implement this, the Investment Manager used data from data providers which rely on international conventions such as the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, as sources of data to determine risk exposure of companies' geographies of operation and business segments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Over the reference period, the product considered principal adverse impacts on sustainability factors. This was done in the following manner:

 A minimum proportion of the investments held in this product must be sustainable investments. In determining whether an investment was a sustainable investment, a number of PAI Indicators were used and where the adverse impact was considered to be excessive, in the judgement of the Investment Manager, based on whether the adverse impact breaches certain thresholds set by the Investment Manager, such investments were not deemed to be sustainable investments. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail.

- The Investment Manager's decision on whether to make an investment in a
 company, and the size of that investment, took into account the PAI Indicators
 (referred to above) relating to the social, environmental and governance
 characteristics of that company, including the adverse impact that the company
 had on sustainability.
- 3. The product did not invest in companies engaged in certain activities which, in the opinion of the Investment Manager, were associated with a particularly adverse impact on sustainability, in excess of certain thresholds. These included companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, and companies with a high degree of involvement in coal extraction or coal-fired electricity generation.
- 4. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact, with a view to influencing the company to change its activities in a manner which will reduce the adverse impact.

What were the top investments of this financial product?

The following sets out a list of the top investments (and relevant sector) of the financial product using the Global Industry Classification Standard (GICS). GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure.

The data presented in this section shows the top 15 investments (ie the greatest proportion of investments of the product) during the reference period and has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments (which were not used to promote the environmental and social characteristics of the product) are not included in the table below.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 year to end August 2024

| Largest Investments | Sector | % Assets | Country |
|--|------------------------|----------|----------------------|
| Microsoft Corporation | INFORMATION TECHNOLOGY | 3 | United States |
| Accenture Plc | INFORMATION TECHNOLOGY | 2.1 | United States |
| Best Buy Company Inc | CONSUMER DISCRETIONARY | 2.1 | United States |
| Cisco Systems Inc | INFORMATION TECHNOLOGY | 2.1 | United States |
| Lam Research Corporation | INFORMATION TECHNOLOGY | 2 | United States |
| Cigna Group | HEALTH CARE | 2 | United States |
| Bank of Nova Scotia | FINANCIALS | 1.9 | Canada |
| Interpublic Group Of Companies Inc | COMMUNICATION SERVICES | 1.9 | United States |
| Netapp Inc | INFORMATION TECHNOLOGY | 1.9 | United States |
| Omnicom Group Inc | COMMUNICATION SERVICES | 1.9 | United States |
| QUALCOMM Inc | INFORMATION TECHNOLOGY | 1.9 | United States |
| Morgan Stanley | FINANCIALS | 1.9 | United States |
| Masco Corp | INDUSTRIALS | 1.8 | United States |
| Cognizant Technology Solutions Corp | INFORMATION TECHNOLOGY | 1.8 | United States |
| Marathon Petroleum Corp | ENERGY | 1.8 | United States |

What was the proportion of sustainability-related investments?

Information on the proportion of the product which promoted environmental/social characteristics and the proportion of the product invested in sustainable investments during the reference period is provided below.

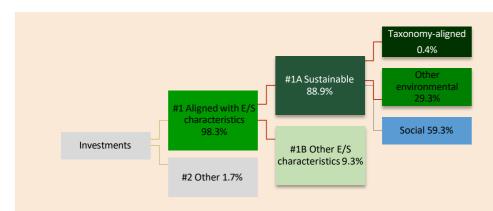

Who

What was the asset allocation?

Based on data as at 31 August 2024, 98.3% of the investments of the product were used to meet the environmental and social characteristics promoted by the product in accordance with the binding elements of the investment strategy. The proportion of the portfolio which was invested in Sustainable Investments was 88.9%.

The remaining portion of investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including ESG-related exclusions.

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#20ther includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In the previous reference period, the proportion of the product's assets invested in environmentally sustainable activities was 36.6%. It should be noted that in this reference period only a minority of investee companies are required to report the proportion of their revenues that are aligned with the EU Taxonomy.

Proportion of investments contributing to EU Taxonomy objectives:

| | Climate change mitigation | Climate change adaptation |
|------------------|---------------------------|---------------------------|
| As % of Turnover | 0.4% | 0% |
| As % of Capex | 0.8% | 0% |
| As % of Opex | 0.6% | 0% |

In which economic sectors were the investments made?

The following table consists of the product's exposure to sub-industries. For the purpose of the table, the Global Industry Classification Standard (GICS) has been used. GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure. The table below shows the composition of the investments held by the product, by GICS sector during the reference period. The data presented has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments are not included in the table below.

| Sector | % Assets |
|------------------------|----------|
| COMMUNICATION SERVICES | 6.9 |
| CONSUMER DISCRETIONARY | 11.4 |

| CONSUMER STAPLES | 5 |
|------------------------|------|
| ENERGY | 5.1 |
| FINANCIALS | 17 |
| HEALTH CARE | 11.6 |
| INDUSTRIALS | 11.6 |
| INFORMATION TECHNOLOGY | 22.2 |
| MATERIALS | 3.2 |
| REAL ESTATE | 2.8 |
| UTILITIES | 2 |
| | |

Note: EXPOSURE TO COMPANIES ACTIVE IN THE FOSSIL FUEL SECTOR (i.e. the percentage of the product's market value exposed to issuers with fossil fuels related activities, including extraction, processing, storage and transportation of petroleum products, natural gas, and thermal and metallurgical coal)

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

9.2%

The proportion of sustainable investments aligned with the EU Taxonomy was 0.4%.

The environmental objective to which the sustainable investments contributed was climate change mitigation.

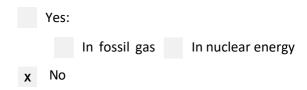

In order to attain the environmental characteristics promoted by this product, the product invested in sustainable investments even though some investments did not meet all of the detailed criteria for "environmentally sustainable investments" within the meaning of the Taxonomy Regulation.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

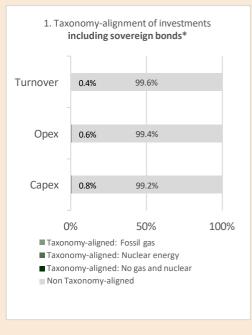

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

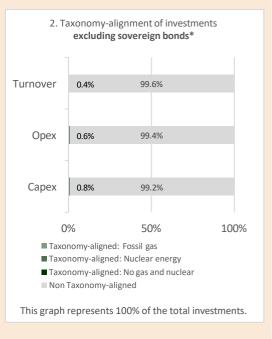

Taxonomy-aligned activities are expressed as a share of:

- turnover reflects the "greenness" of investee companies today.
- expenditure
 (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

Investments in environmentally sustainable economic activities:

| | Transitional | Enabling |
|------------------|--------------|----------|
| As % of Turnover | 0% | 0.3% |
| As % of Capex | 0% | 0.5% |
| As % of Opex | 0% | 0.4% |

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

(EU) 2020/852.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage of investments that were aligned with the EU Taxonomy was 0.4% in the current reference period.

The percentage of investments that were aligned with the EU Taxonomy was 0% in the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The product invested 29.3% of its assets in sustainable investments with environmental characteristics which did not qualify as environmentally sustainable under the EU Taxonomy.

What was the share of socially sustainable investments?

The product invested 59.3% of its assets in socially sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

11.1% of investments were not classified as sustainable investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including the exclusion of companies involved with certain controversial activities, and the exclusion of companies that violate, repeatedly and seriously, one or more of the ten principles of the UN Global Compact.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken to achieve the environmental and social characteristics were:

The Investment Manager integrated an analysis of companies' ESG performance into
its investment analysis and investment decisions. Companies were rated on an AAACCC scale relative to the standards and performance of their industry peers, which
was then translated into an ESG score. The Investment Manager got a single ESG
score for each stock from MSCI ESG Research (the "Data Provider"), each stock

receiving a score of between 0 and 10, with the highest scoring company receiving a 10. The Investment Manager favoured higher score stocks where possible and its aim was for the portfolio to have an equal or higher weighted ESG score than its comparable benchmark.

- The portfolio construction process excluded holdings deemed inconsistent with the Investment Manager's Responsible Investment Policy or that were involved with certain controversial sectors, as determined by the Investment Manager's Responsible Investing Committee.
- Further, the product did not invest in companies involved in certain activities including tobacco manufacturing, coal extraction and coal-fired electricity generation, in excess of certain thresholds.
- The Investment Manager collaborated on 21 topics and engaged with 21 companies on a range of issues, including engagement with companies which had high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact.

How did this financial product perform compared to the reference benchmark? Not applicable

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the product.

- How does the reference benchmark differ from a broad market index?
 Not Applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
 Not applicable.
- How did this financial product perform compared with the broad market index?
 Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: KBI Global Resource Solutions Fund (the "product")

Legal entity identifier: 635400SU22EKQDCT8C62

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective? Yes It made **sustainable** It promoted Environmental/Social (E/S) characteristics and investments with an while it did not have as its objective a environmental objective: ___% sustainable investment, it had a proportion of in economic activities that 93.8% of sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in economic Taxonomy activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally with an environmental objective in Χ sustainable under the EU economic activities that do not qualify as Taxonomy environmentally sustainable under the EU Taxonomy with a social objective Χ It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: ___%

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the

investment does not

social objective and that the investee

companies follow

good governance

practices.

significantly harm any environmental or

does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics promoted by the product were the provision of vital natural resources such as water, agribusiness and clean energy. The provision of vital natural resources such as water, agribusiness and clean energy is, in the opinion of the Investment Manager, a benefit to the environment and to society.

This was achieved by investing in a portfolio of companies which, in the opinion of the Investment Manager, on an aggregate portfolio basis, generate a substantial proportion of

their turnover from and operate on a sustainable basis in, the environmental sector by providing solutions to environmental challenges, including but not limited to, infrastructure and technological advancement of water, energy efficiency, energy transition, waste management and recycling, agribusiness and carbon trading.

The Investment Manager used a range of sustainability indicators to measure the extent to which the environmental and social characteristics of the product were met. Investors should refer to the next section below for an assessment of how the sustainability indicators performed during the reference period.

The product was managed with the aim of progressively reducing net carbon emissions of investee companies and of eventually reaching net zero emissions by 2050. The Investment Manager monitored the carbon intensity of companies in which the product invested. Carbon intensity is a measure of greenhouse gas emissions, in tonnes, relative to the revenue of the company or portfolio. The Investment Manager obtained carbon intensity data from the Data Provider.

While the product promoted carbon emission reduction and better corporate practices, investors should be aware that this product does not have reduction of carbon emissions as its objective within the meaning of Article 9(3) of SFDR.

The environmental objectives to which the sustainable investments contributed were climate change mitigation and climate change adaptation.

The extent of the product's impact is further described in the section below headed "How did this financial product consider principal adverse impacts on sustainability factors?". The proportion of the product that was aligned with the environmental and social characteristics is disclosed under the section below headed "What was the proportion of sustainability-related investments?". The objectives of the sustainable investments are set out under the heading "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The Investment Manager used three indicators to measure the environmental and social characteristics of the product as follows:

- The percentage of revenues earned on an estimated basis by investee companies which are from the environmental solutions sector.
- The weighted average ESG rating of the product, as determined by the use of ESG ratings of companies, supplied by an external data provider of ESG research and ratings.
- The carbon intensity of the product measured by an external provider of carbon footprint measurement services.

The following shows how each indicator performed during the reference period under review. Each measure was calculated based on the portfolio holdings and relevant metric at the end of the period under review.

| Sustainability Indicator | 2024 | 2023 |
|---|-------------------------------------|-------------------------------------|
| Percentage (estimated) of revenues earned by investee companies from the environmental solutions sector | 80.6% | 78.7% |
| Weighted Average MSCI ESG Score of the portfolio | 7.5 | 7.5 |
| Weighted Average Carbon Intensity of the portfolio | 201.9 tons CO2e / million USD sales | 282.4 tons CO2e / million USD sales |

...and compared to previous periods?

See table in the section headed "How did the sustainability indicators perform?".

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

This product invests partially in sustainable investments.

The objectives of these sustainable investments are the provision of vital natural resources such as water, agribusiness and clean energy. The provision of vital natural resources such as water, agribusiness and clean energy is, in the opinion of the Investment Manager, a benefit to the environment and to society.

The sustainable investments contributed to these objectives by increasing investment in activities including, but not limited to, infrastructure and technological advancement of water, energy efficiency, energy transition, waste management and recycling, agribusiness and carbon trading.

Please refer to the section above headed "How did the sustainability indicators perform?" for more detail on the indicators used to assess the contribution to the objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments of the product were assessed to ensure that they do not cause significant harm to any environmental or social objective. This assessment made use of Principal Adverse Impact Indicators ("PAI Indicators"), where applicable and where data was sufficiently available, and ensured that certain minimum standards were reached for each applicable PAI Indicator.

The following PAI Indicators were used throughout the period under review.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

| PAI Indicator | Explanation | 2024 | 2023 |
|-------------------------|---|--------------------|----------------|

|--|---|---|---|
| e. NACE Code E (Water Supply, Sewerage, Waste Management and Remediation Activities) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code E | 1.02 GWh / million EUR revenue | 1.43 GWh / million EUR revenue |
| f. NACE Code F (Construction) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code F | 0.22 GWh / million EUR revenue | 0.3 GWh / million EUR revenue |
| g. NACE Code G (Wholesale and Retail Trade Repair of Motor Vehicles and Motorcycles) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code G | 0.75 GWh / million EUR revenue | 1.9 GWh / million EUR revenue |
| h. NACE Code H (Transportation and Storage) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code H | 0 GWh / million EUR revenue | 0 GWh / million EUR revenue |
| i. NACE Code L (Real estate activities) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code L | 21.67 GWh / million EUR revenue | 0 GWh / million EUR revenue |
| 7. Activities negatively affecting biodiversity-sensitive areas | The percentage of the portfolio's market value exposed to issuers' that reported having operations in or near biodiversity sensitive areas and have been implicated in controversies with severe or very severe impacts on the environment. | 0% | 1.1% |
| 8. Emissions to Water | The total annual wastewater discharged (metric tons reported) into surface waters as a result of industrial or manufacturing activities associated with 1 million EUR invested in the portfolio. Companies' water emissions are apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 0.2 metric tons / million EUR invested | 0.24 metric tons / million EUR invested |
| 9. Hazardous waste ratio | The total annual hazardous waste (metric tons reported) associated with 1 million EUR invested in the portfolio. Companies' hazardous waste is apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 0.67 metric tons / million EUR invested | 0.91 metric tons / million EUR invested |
| 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers with very severe controversies related to the company's operations and/or products. | 0% | 0% |

| 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers that have at least one policy covering some of the UNGC principles or OECD Guidelines for Multinational Enterprises and either a monitoring system evaluating compliance with such policy or a grievance/complaints handling mechanism. | 0% | 45.8% |
|---|---|-------|-------|
| 12. Unadjusted gender pay gap | The portfolio holdings' weighted average of the difference between the average gross hourly earnings of male and female employees, as a percentage of male gross earnings. | 13.5% | 5.9% |
| 13. Board gender diversity | The portfolio holdings' weighted average of the percentage of board members who are female. For companies with a two-tier board, the calculation is based on members of the Supervisory Board only. | 36.8% | 35.4% |
| 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | The percentage of the portfolio's market value exposed to issuers with an industry tie to landmines, cluster munitions, chemical weapons or biological weapons. Note: Industry ties includes ownership, manufacturing and investments. Ties to landmines do not include related safety products. | 0% | 0% |
| 15. Investments in companies without carbon emission reduction initiatives | The percentage of the portfolio's market value exposed to issuers without a carbon emissions reduction target. | 46.5% | 47.3% |
| 16. Investments in companies without workplace accident prevention policies | The percentage of the portfolio's market value exposed to issuers without a workplace accident prevention policy. | 3.1% | 3.8% |

Note that in the PAI Indicators table above, for items 6a to 6i, there may be no investments in companies in the relevant NACE sector or there may be no data available for any companies in the relevant NACE sector. In such cases the table will show a value of 0 GWh / million EUR revenue.

How were the indicators for adverse impacts on sustainability factors taken into account?

The indicators for adverse impacts on sustainability factors were taken into account by applying certain exclusion strategies aligned to the PAI Indicators and by monitoring the PAI Indicators in the following manner:

1. When ensuring that a sustainable investment did not cause significant harm to any environmental or social objective, the Investment Manager made use of various PAI Indicators. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail. The Investment Manager ensured that certain minimum standards were reached for each applicable PAI Indicator.

- 2. The product did not invest in companies materially engaged in certain activities which, in the opinion of the Investment Manager, are associated with a particularly adverse impact on sustainability. These included companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, companies with a high degree of involvement in coal extraction or coal-fired electricity generation, and companies with material revenues from fracking, for-profit prisons, civilian firearms and ammunition, weapons and weapons systems, and the production of nuclear weapons.
- 3. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact. Please refer to the section below headed "What actions have been taken to meet the environmental and/or social characteristics during the reference period?" for more detail.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, the sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights through the use of environmental and UNGC (UN Global Compact) controversies screening as an indication for alignment with OECD guidelines / UN guiding principles along with other tools including ESG scores and research as part of the investment.

The product did not invest in any company which violates, repeatedly and seriously, one or more of the ten principles of the UN Global Compact. To implement this, the Investment Manager used data from data providers which rely on international conventions such as the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, as sources of data to determine risk exposure of companies' geographies of operation and business segments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Over the reference period, the product considered principal adverse impacts on sustainability factors. This was done in the following manner:

- 1. A minimum proportion of the investments held in this product must be sustainable investments. In determining whether an investment was a sustainable investment, a number of PAI Indicators were used and where the adverse impact was considered to be excessive, in the judgement of the Investment Manager, based on whether the adverse impact breaches certain thresholds set by the Investment Manager, such investments were not deemed to be sustainable investments. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail.
- 2. The Investment Manager's decision on whether to make an investment in a company, and the size of that investment, took into account the PAI Indicators (referred to above) relating to the social, environmental and governance characteristics of that company, including the adverse impact that the company had on sustainability.
- 3. The product did not invest in companies engaged in certain activities which, in the opinion of the Investment Manager, were associated with a particularly adverse impact on sustainability, in excess of certain thresholds. These included companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, companies with a high degree of involvement in coal extraction or coal-fired electricity generation, and companies with material revenues from fracking, for-profit prisons, civilian firearms and ammunition, weapons and weapons systems, and the production of nuclear weapons.
- 4. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact, with a view to

influencing the company to change its activities in a manner which will reduce the adverse impact.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 year to end August 2024

What were the top investments of this financial product?

The following sets out a list of the top investments (and relevant sector) of the financial product using the Global Industry Classification Standard (GICS). GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure.

The data presented in this section shows the top 15 investments (ie the greatest proportion of investments of the product) during the reference period and has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments (which were not used to promote the environmental and social characteristics of the product) are not included in the table below.

| Largest Investments | Sector | % Assets | Country |
|-------------------------------------|------------------------|----------|---------------|
| Veolia Environnement SA | UTILITIES | 3 | France |
| United Utilities Group Plc | UTILITIES | 2.5 | UK |
| Xylem Inc | INDUSTRIALS | 2 | United States |
| Vestas Wind Systems A/S | INDUSTRIALS | 1.9 | Denmark |
| NXP Semiconductors NV | INFORMATION TECHNOLOGY | 1.9 | United States |
| Essential Utilities Inc | UTILITIES | 1.8 | United States |
| Aecom | INDUSTRIALS | 1.8 | United States |
| Halma PLC | INFORMATION TECHNOLOGY | 1.8 | UK |
| RWE AG | UTILITIES | 1.8 | Germany |
| First Solar Inc | INFORMATION TECHNOLOGY | 1.7 | United States |
| Nutrien Limited | MATERIALS | 1.7 | Canada |
| Bunge Global SA | CONSUMER STAPLES | 1.7 | United States |
| ASML Holding NV | INFORMATION TECHNOLOGY | 1.7 | Netherlands |
| DSM-Firmenich AG | MATERIALS | 1.5 | Netherlands |
| American Water Works Company Inc | UTILITIES | 1.5 | United States |

Asset allocation describes the share of investments in specific assets.

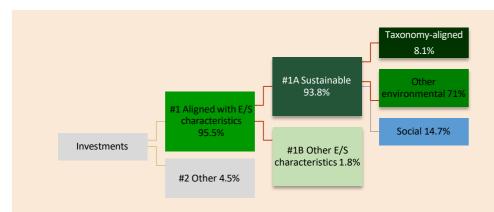

What was the proportion of sustainability-related investments?

Information on the proportion of the product which promoted environmental/social characteristics and the proportion of the product invested in sustainable investments during the reference period is provided below.

What was the asset allocation?

Based on data as at 31 August 2024, 95.5% of the investments of the product were used to meet the environmental and social characteristics promoted by the product in accordance with the binding elements of the investment strategy. The proportion of the portfolio which was invested in Sustainable Investments was 93.8%.

The remaining portion of investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including ESG-related exclusions.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#20ther includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In the previous reference period, the proportion of the product's assets invested in environmentally sustainable activities was 78.2%. It should be noted that in this reference period only a minority of investee companies are required to report the proportion of their revenues that are aligned with the EU Taxonomy.

Proportion of investments contributing to EU Taxonomy objectives:

| | Climate change mitigation | Climate change adaptation |
|------------------|---------------------------|---------------------------|
| As % of Turnover | 5.5% | 0% |
| As % of Capex | 5.9% | 0.2% |
| As % of Opex | 5.1% | 0% |

In which economic sectors were the investments made?

The following table consists of the product's exposure to sub-industries. For the purpose of the table, the Global Industry Classification Standard (GICS) has been used. GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure. The table below shows the composition of the investments held by the product, by GICS sector during the reference

period. The data presented has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments are not included in the table below.

| Sector | % Assets |
|---|----------|
| COMMUNICATION SERVICES | 0 |
| CONSUMER DISCRETIONARY | 4.3 |
| CONSUMER STAPLES | 8 |
| ENERGY | 0 |
| FINANCIALS | 1.4 |
| HEALTH CARE | 1.2 |
| INDUSTRIALS | 31 |
| INFORMATION TECHNOLOGY | 15.6 |
| MATERIALS | 11.3 |
| REAL ESTATE | 0.4 |
| UTILITIES | 25.7 |
| Note: EXPOSURE TO COMPANIES ACTIVE IN THE FOSSIL FUEL SECTOR (i.e. the percentage of the product's market value exposed to issuers with fossil fuels related activities, including extraction, processing, storage and transportation of petroleum products, natural gas, and thermal and metallurgical coal) | 10.2% |

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of sustainable investments aligned with the EU Taxonomy was 8.1%.

The environmental objectives to which the sustainable investments contributed were climate change mitigation and climate change adaptation.

In order to attain the environmental characteristics promoted by this product, the product invested in sustainable investments even though some investments did not meet all of the detailed criteria for "environmentally sustainable investments" within the meaning of the Taxonomy Regulation.

| Did the financial product invest in fossil gas and/or nuclear er | nergy related |
|--|---------------|
| activities complying with the EU Taxonomy ¹ ? | |

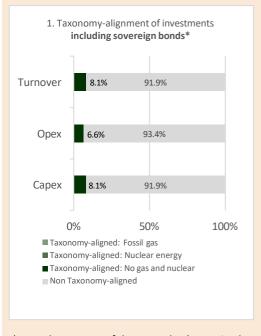

| | Yes: | | |
|---|------|---------------|-------------------|
| | | In fossil gas | In nuclear energy |
| X | No | | |

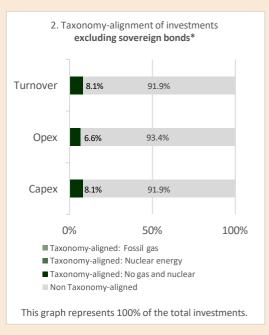

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflects the "greenness" of investee companies today.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.
- What was the share of investments made in transitional and enabling activities?

Investments in environmentally sustainable economic activities:

| | Transitional | Enabling | |
|------------------|--------------|----------|--|
| As % of Turnover | 0% | 3.3% | |
| As % of Capex | 0.1% | 4.3% | |
| As % of Opex | 0% | 3.6% | |

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage of investments that were aligned with the EU Taxonomy was 8.1% in the current reference period.

The percentage of investments that were aligned with the EU Taxonomy was 0% in the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The product invested 71% of its assets in sustainable investments with environmental characteristics which did not qualify as environmentally sustainable under the EU Taxonomy.

What was the share of socially sustainable investments?

The product invested 14.7% of its assets in socially sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

6.2% of investments were not classified as sustainable investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including the exclusion of companies involved with certain controversial activities, and the exclusion of companies that violate, repeatedly and seriously, one or more of the ten principles of the UN Global Compact.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken to achieve the environmental and social characteristics were:

- The Investment Manager identified companies which operated in the environmental solutions sector and integrated an analysis of such companies' Environmental, Social and Governance ("ESG") performance into its investment analysis and investment decisions.
- The Investment Manager carried out its own assessment of the environmental performance of companies in which it invested, based on its own research and knowledge of the companies, public information and information (including specialised ESG information) and ratings from external data providers.

- The portfolio construction process excluded holdings deemed inconsistent with the Investment Manager's Responsible Investment Policy or that were involved with certain controversial sectors, as determined by the Investment Manager's Responsible Investing Committee. The product did not invest in any company which is not involved in the environmental solutions sector. The product may invest across all facets of the environmental sector including but not limited to, infrastructure and technological advancement of water, energy efficiency, energy transition, waste management and recycling, agribusiness and carbon trading. Further, the product did not invest in companies involved in certain activities including tobacco manufacturing, coal extraction and coal-fired electricity generation, in excess of certain thresholds.
- The Investment Manager collaborated on 21 topics and engaged with 30 companies on a range of issues, including engagement with companies which had high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact.

How did this financial product perform compared to the reference benchmark? Not applicable

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the product.

- How does the reference benchmark differ from a broad market index?
 Not Applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
 Not applicable.
- How did this financial product perform compared with the broad market index?
 Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: KBI Eurozone Equity Fund (the "product")

Legal entity identifier: 635400G5FKIXWXQYOG63

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective? Yes No It made **sustainable** It promoted Environmental/Social (E/S) characteristics and investments with an while it did not have as its objective a environmental objective: ___% sustainable investment, it had a proportion of in economic activities that 92.7% of sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in economic Χ activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally with an environmental objective in sustainable under the EU economic activities that do not qualify as environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: ___%

2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Taxonomy or not.

Sustainable investment means
an investment in an

economic activity that contributes to an environmental or social objective,

provided that the

investment does not significantly harm

any environmental or social objective and

that the investee

companies follow

good governance

The **EU Taxonomy** is

system laid down in

a classification

Regulation (EU)

practices.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics promoted by the product were reductions in harm to the environment and climate arising from the emissions of greenhouse gases and better corporate practices that contribute to a more just society, by, for example, enhancing human capital or providing improved social opportunities to services such as finance, health care, and communications.

The Investment Manager used a range of sustainability indicators to measure the extent to which the environmental and social characteristics of the product were met. Investors

should refer to the next section below for an assessment of how the sustainability indicators performed during the reference period.

The product was managed with the aim of progressively reducing net carbon emissions of investee companies and of eventually reaching net zero emissions by 2050. The product also sought to have a carbon intensity level lower than the Index. The Investment Manager monitored the carbon intensity of companies in which the product invested. Carbon intensity is a measure of greenhouse gas emissions, in tonnes, relative to the revenue of the company or portfolio. The Investment Manager obtained carbon intensity data from the Data Provider.

The environmental objectives to which the sustainable investments contributed were climate change mitigation and climate change adaptation.

While the product promotes carbon emission reduction and better corporate practices, investors should be aware that this product does not have reduction of carbon emissions as its objective within the meaning of Article 9(3) of SFDR. Further, the investment strategy of the product is not continuously aligned with the Index and the Index is not used for the purpose of determining the attainment of the environmental and social characteristics promoted by the product. The Index is a broad market index and is not aligned with the environmental and social characteristics promoted by the product.

The extent of the product's impact is further described in the section below headed "How did this financial product consider principal adverse impacts on sustainability factors?". The proportion of the product that was aligned with the environmental and social characteristics is disclosed under the section below headed "What was the proportion of sustainability-related investments?". The objectives of the sustainable investments are set out under the heading "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The Investment Manager used two indicators to measure the environmental and social characteristics of the product as follows:

- The weighted average ESG rating of the product, as determined by the use of ESG ratings of companies, supplied by an external data provider of ESG research and ratings.
- The carbon intensity of the product measured by an external provider of carbon footprint measurement services.

The following shows how each indicator performed during the reference period under review. Each measure was calculated based on the portfolio holdings and relevant metric at the end of the period under review.

| Sustainability Indicator | 2024 | 2023 |
|--|------------------------------------|------------------------------------|
| Weighted Average MSCI ESG Score of the portfolio | 7.9 | 8 |
| Weighted Average Carbon Intensity of the portfolio | 61.9 tons CO2e / million USD sales | 70.8 tons CO2e / million USD sales |

...and compared to previous periods?

See table in the section headed "How did the sustainability indicators perform?".

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

This product invests partially in sustainable investments.

The objectives of these sustainable investments are the the reduction in harm to the environment and climate arising from the emissions of greenhouse gases and better corporate practices that contribute to a more just society by, for example, enhancing human capital or providing improved social opportunities to services such as finance, health care, and communications

The sustainable investments contribute to these objectives through the reduction in the carbon intensity of the portfolio and through the promotion of improved corporate practices that contribute to a more just society. Please refer to the section above headed "How did the sustainability indicators perform?" for more detail on the indicators used to assess the contribution to the objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments of the product were assessed to ensure that they do not cause significant harm to any environmental or social objective. This assessment made use of Principal Adverse Impact Indicators ("PAI Indicators"), where applicable and where data was sufficiently available, and ensured that certain minimum standards were reached for each applicable PAI Indicator.

The following PAI Indicators were used throughout the period under review.

| PAI Indicator | Explanation | 2024 | 2023 |
|------------------|---|--------------------|--------------------|
| 1. GHG Emissions | Sum of portfolio companies' Carbon Emissions - Scope 1 (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 2,842 tons CO2e | 2,486 tons CO2e |
| 1. GHG Emissions | Sum of portfolio companies' Carbon Emissions - Scope 2 (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 510 tons CO2e | 456 tons CO2e |

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

| 1. GHG Emissions | Sum of portfolio companies' Scope 3 - Total Emission Estimated (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 27,215 tons CO2e | 28,726 tons CO2e |
|--|--|--|--|
| 1. GHG Emissions | The total annual Scope 1, Scope 2, and estimated Scope 3 GHG emissions associated with the market value of the portfolio. Companies' carbon emissions are apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 30,344 tons CO2e | 31,725 tons CO2e |
| 2. Carbon Footprint | Sum of portfolio companies' Total GHG Emissions (Scopes 1, 2 and 3) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash, adjusted to show the emissions associated with 1 million EUR invested in the portfolio. | 680 tons CO2e / million EUR invested | 729 tons CO2e / million EUR invested |
| 3. GHG Intensity of investee companies | The portfolio's weighted average of its holding issuers' GHG Intensity (Scope 1, Scope 2 and estimated Scope 3 GHG emissions/EUR million revenue). | 794 tons CO2e / million EUR sales | 768 tons CO2e / million EUR sales |
| 4. Exposure to companies active in the fossil fuel sector | The percentage of the portfolio's market value exposed to issuers with fossil fuels related activities, including extraction, processing, storage and transportation of petroleum products, natural gas, and thermal and metallurgical coal. | 12.6% | 15.1% |
| 5. Share of non- renewable energy consumption and production | The portfolio's weighted average of issuers' energy consumption and/or production from non-renewable sources as a percentage of total energy used and/or generated. | 60.4% | 65% |
| 6. Energy consumption intensity per high impact climate sector: a. NACE Code A (Agriculture, Forestry and Fishing) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code A | 0 GWh / million EUR revenue | 0 GWh / million EUR revenue |
| b. NACE Code B (Mining and Quarrying) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code B | 0 GWh / million EUR revenue | 0 GWh / million EUR revenue |
| c. NACE Code C (Manufacturing) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code C | 0.48 GWh / million EUR revenue | 0.55 GWh / million EUR revenue |
| d. NACE Code D (Electricity, Gas, Steam and Air Conditioning Supply) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code D | 2.29 GWh / million EUR revenue | 3.22 GWh / million EUR revenue |
| e. NACE Code E (Water Supply, Sewerage, Waste Management and Remediation Activities) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code E | 0 GWh / million EUR revenue | 0 GWh / million EUR revenue |
| f. NACE Code F (Construction) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code F | 0.1 GWh / million EUR revenue | 0.09 GWh / million EUR revenue |

| g. NACE Code G (Wholesale and Retail Trade Repair of Motor Vehicles and Motorcycles) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code G | 0.21 GWh / million EUR revenue | 0.28 GWh / million EUR revenue |
|---|---|---|---|
| h. NACE Code H (Transportation and Storage) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code H | 0.37 GWh / million EUR revenue | 0.37 GWh / million EUR revenue |
| i. NACE Code L (Real estate activities) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code L | 0.13 GWh / million EUR revenue | 0.05 GWh / million EUR revenue |
| 7. Activities negatively affecting biodiversity-sensitive areas | The percentage of the portfolio's market value exposed to issuers' that reported having operations in or near biodiversity sensitive areas and have been implicated in controversies with severe or very severe impacts on the environment. | 0% | 1.4% |
| 8. Emissions to Water | The total annual wastewater discharged (metric tons reported) into surface waters as a result of industrial or manufacturing activities associated with 1 million EUR invested in the portfolio. Companies' water emissions are apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 0 metric tons / million EUR invested | 0 metric tons / million EUR invested |
| 9. Hazardous waste ratio | The total annual hazardous waste (metric tons reported) associated with 1 million EUR invested in the portfolio. Companies' hazardous waste is apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 1.16 metric tons / million EUR invested | 2.82 metric tons / million EUR invested |
| 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers with very severe controversies related to the company's operations and/or products. | 0% | 0.5% |
| 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers that have at least one policy covering some of the UNGC principles or OECD Guidelines for Multinational Enterprises and either a monitoring system evaluating compliance with such policy or a grievance/complaints handling mechanism. | 0% | 9.3% |
| 12. Unadjusted gender pay gap | The portfolio holdings' weighted average of the difference between the average gross hourly earnings of male and female employees, as a percentage of male gross earnings. | 12.1% | 11.5% |
| 13. Board gender diversity | The portfolio holdings' weighted average of the percentage of board members who are female. For companies with a two-tier board, the calculation is based on members of the Supervisory Board only. | 43.6% | 41.5% |

| 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | The percentage of the portfolio's market value exposed to issuers with an industry tie to landmines, cluster munitions, chemical weapons or biological weapons. Note: Industry ties includes ownership, manufacturing and investments. Ties to landmines do not include related safety products. | 0% | 0% |
|--|--|-------|-------|
| 15. Investments in companies without carbon emission reduction initiatives | The percentage of the portfolio's market value exposed to issuers without a carbon emissions reduction target. | 34.4% | 19.1% |
| 16. Investments in companies without workplace accident prevention policies | The percentage of the portfolio's market value exposed to issuers without a workplace accident prevention policy. | 0.3% | 2.9% |

Note that in the PAI Indicators table above, for items 6a to 6i, there may be no investments in companies in the relevant NACE sector or there may be no data available for any companies in the relevant NACE sector. In such cases the table will show a value of 0 GWh / million EUR revenue.

How were the indicators for adverse impacts on sustainability factors taken into account?

The indicators for adverse impacts on sustainability factors were taken into account by applying certain exclusion strategies aligned to the PAI Indicators and by monitoring the PAI Indicators in the following manner:

- 1. When ensuring that a sustainable investment did not cause significant harm to any environmental or social objective, the Investment Manager made use of various PAI Indicators. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail. The Investment Manager ensured that certain minimum standards were reached for each applicable PAI Indicator.
- 2. The product did not invest in companies materially engaged in certain activities which, in the opinion of the Investment Manager, are associated with a particularly adverse impact on sustainability. These included companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, and companies with a high degree of involvement in coal extraction or coal-fired electricity generation.
- 3. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact. Please refer to the section below headed "What actions have been taken to meet the

environmental and/or social characteristics during the reference period?" for more detail.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, the sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights through the use of environmental and UNGC (UN Global Compact) controversies screening as an indication for alignment with OECD guidelines / UN guiding principles along with other tools including ESG scores and research as part of the investment.

The product did not invest in any company which violates, repeatedly and seriously, one or more of the ten principles of the UN Global Compact. To implement this, the Investment Manager used data from data providers which rely on international conventions such as the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, as sources of data to determine risk exposure of companies' geographies of operation and business segments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Over the reference period, the product considered principal adverse impacts on sustainability factors. This was done in the following manner:

1. A minimum proportion of the investments held in this product must be sustainable investments. In determining whether an investment was a sustainable investment, a number of PAI Indicators were used and where the adverse impact was considered to be excessive, in the judgement of the Investment Manager, based on whether the adverse impact breaches certain

thresholds set by the Investment Manager, such investments were not deemed to be sustainable investments. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail.

- The Investment Manager's decision on whether to make an investment in a
 company, and the size of that investment, took into account the PAI Indicators
 (referred to above) relating to the social, environmental and governance
 characteristics of that company, including the adverse impact that the company
 had on sustainability.
- 3. The product did not invest in companies engaged in certain activities which, in the opinion of the Investment Manager, were associated with a particularly adverse impact on sustainability, in excess of certain thresholds. These included companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, and companies with a high degree of involvement in coal extraction or coal-fired electricity generation.
- 4. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact, with a view to influencing the company to change its activities in a manner which will reduce the adverse impact.

What were the top investments of this financial product?

The following sets out a list of the top investments (and relevant sector) of the financial product using the Global Industry Classification Standard (GICS). GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure.

The data presented in this section shows the top 15 investments (ie the greatest proportion of investments of the product) during the reference period and has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments (which were not used to promote the environmental and social characteristics of the product) are not included in the table below.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 year to end August 2024

| Largest Investments | Sector | % Assets | Country |
|---------------------------------------|------------------------|----------|-------------|
| ASML Holding NV | INFORMATION TECHNOLOGY | 4.7 | Netherlands |
| Sanofi-Aventis | HEALTH CARE | 4.5 | France |
| Axa SA | FINANCIALS | 4 | France |

What was the proportion of sustainability-related investments?

Information on the proportion of the product which promoted environmental/social characteristics and the proportion of the product invested in sustainable investments during the reference period is provided below.

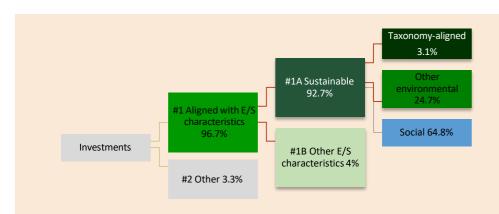

What was the asset allocation?

Based on data as at 31 August 2024, 96.7% of the investments of the product were used to meet the environmental and social characteristics promoted by the product in accordance with the binding elements of the investment strategy. The proportion of the portfolio which was invested in Sustainable Investments was 92.7%.

The remaining portion of investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including ESG-related exclusions.

Asset allocation describes the share

of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#20ther includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In the previous reference period, the proportion of the product's assets invested in environmentally sustainable activities was 39.9%.

Proportion of investments contributing to EU Taxonomy objectives:

| | Climate change mitigation | Climate change adaptation |
|------------------|---------------------------|---------------------------|
| As % of Turnover | 3.1% | 0% |
| As % of Capex | 6.6% | 0% |
| As % of Opex | 4.7% | 0.2% |

In which economic sectors were the investments made?

The following table consists of the product's exposure to sub-industries. For the purpose of the table, the Global Industry Classification Standard (GICS) has been used. GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure. The table below shows the composition of the investments held by the product, by GICS sector during the reference period. The data presented has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments are not included in the table below.

| Sector | % Assets |
|------------------------|----------|
| COMMUNICATION SERVICES | 3.5 |
| CONSUMER DISCRETIONARY | 17.1 |
| CONSUMER STAPLES | 5.6 |
| ENERGY | 5.3 |
| FINANCIALS | 20.6 |

| HEALTH CARE | 6.4 |
|--|-------|
| INDUSTRIALS | 17.9 |
| INFORMATION TECHNOLOGY | 11.6 |
| MATERIALS | 4.4 |
| REAL ESTATE | 0.6 |
| UTILITIES | 6.6 |
| | |
| Note: EXPOSURE TO COMPANIES ACTIVE IN THE FOSSIL FUEL | |
| SECTOR (i.e. the percentage of the product's market value exposed to issuers with fossil fuels related activities, including extraction, processing, storage and transportation of petroleum | 12.6% |

products, natural gas, and thermal and metallurgical coal)

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best

performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of sustainable investments aligned with the EU Taxonomy was 3.1%.

The environmental objectives to which the sustainable investments contributed were climate change mitigation and climate change adaptation.

In order to attain the environmental characteristics promoted by this product, the product invested in sustainable investments even though some investments did not meet all of the detailed criteria for "environmentally sustainable investments" within the meaning of the Taxonomy Regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

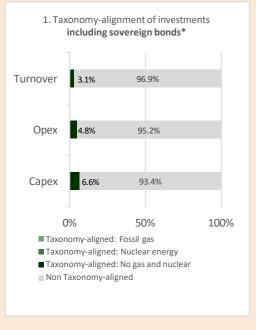

| | Yes: | | |
|---|------|---------------|-------------------|
| | | In fossil gas | In nuclear energy |
| X | No | | |

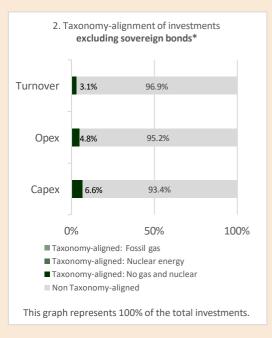

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflects the "greenness" of investee companies today.
- expenditure
 (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.
- What was the share of investments made in transitional and enabling activities?

Investments in environmentally sustainable economic activities:

| | Transitional | Enabling | |
|------------------|--------------|----------|--|
| As % of Turnover | 0% | 2.1% | |
| As % of Capex | 0.1% | 3.8% | |
| As % of Opex | 0% | 3.1% | |

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage of investments that were aligned with the EU Taxonomy was 3.1% in the current reference period.

The percentage of investments that were aligned with the EU Taxonomy was 0% in the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The product invested 24.7% of its assets in sustainable investments with environmental characteristics which did not qualify as environmentally sustainable under the EU Taxonomy.

What was the share of socially sustainable investments?

The product invested 64.8% of its assets in socially sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

7.3% of investments were not classified as sustainable investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including the exclusion of companies involved with certain controversial activities, and the exclusion of companies that violate, repeatedly and seriously, one or more of the ten principles of the UN Global Compact.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken to achieve the environmental and social characteristics were:

• The Investment Manager integrated an analysis of companies' ESG performance into its investment analysis and investment decisions. Companies were rated on an AAA-CCC scale relative to the standards and performance of their industry peers, which was then translated into an ESG score. The Investment Manager got a single ESG score for each stock from MSCI ESG Research (the "Data Provider"), each stock receiving a score of between 0 and 10, with the highest scoring company receiving a 10. The Investment Manager favoured higher score stocks where possible and its aim was for the portfolio to have an equal or higher weighted ESG score than its comparable benchmark.

- The portfolio construction process excluded holdings deemed inconsistent with the Investment Manager's Responsible Investment Policy or that were involved with certain controversial sectors, as determined by the Investment Manager's Responsible Investing Committee.
- Further, the product did not invest in companies involved in certain activities including tobacco manufacturing, coal extraction and coal-fired electricity generation, in excess of certain thresholds.
- The Investment Manager collaborated on 21 topics and engaged with 21 companies on a range of issues, including engagement with companies which had high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact.

How did this financial product perform compared to the reference benchmark? Not applicable

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the product.

- How does the reference benchmark differ from a broad market index?
 Not Applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
 Not applicable.
- How did this financial product perform compared with the broad market index?
 Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: KBI North America Equity Fund (the "product")

Legal entity identifier: 6354006PXSOJ6YADBK04

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective? Yes It made **sustainable** It promoted Environmental/Social (E/S) characteristics and investments with an while it did not have as its objective a environmental objective: ___% sustainable investment, it had a proportion of in economic activities that 88.5% of sustainable investments qualify as environmentally with an environmental objective in economic sustainable under the EU activities that qualify as environmentally Taxonomy sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally with an environmental objective in Χ sustainable under the EU economic activities that do not qualify as Taxonomy environmentally sustainable under the EU Taxonomy with a social objective Χ It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: ___%

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities.

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the

investment does not

social objective and that the investee

companies follow

good governance

practices.

significantly harm any environmental or

That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics promoted by the product were reductions in harm to the environment and climate arising from the emissions of greenhouse gases and better corporate practices that contribute to a more just society, by, for example, enhancing human capital or providing improved social opportunities to services such as finance, health care, and communications.

The Investment Manager used a range of sustainability indicators to measure the extent to which the environmental and social characteristics of the product were met. Investors should refer to the next section below for an assessment of how the sustainability indicators performed during the reference period.

The product was managed with the aim of progressively reducing net carbon emissions of investee companies and of eventually reaching net zero emissions by 2050. The product also sought to have a carbon intensity level lower than the Index. The Investment Manager monitored the carbon intensity of companies in which the product invested. Carbon intensity is a measure of greenhouse gas emissions, in tonnes, relative to the revenue of the company or portfolio. The Investment Manager obtained carbon intensity data from the Data Provider.

While the product promotes carbon emission reduction and better corporate practices, investors should be aware that this product does not have reduction of carbon emissions as its objective within the meaning of Article 9(3) of SFDR. Further, the investment strategy of the product is not continuously aligned with the Index and the Index is not used for the purpose of determining the attainment of the environmental and social characteristics promoted by the product. The Index is a broad market index and is not aligned with the environmental and social characteristics promoted by the product.

The extent of the product's impact is further described in the section below headed "How did this financial product consider principal adverse impacts on sustainability factors?". The proportion of the product that was aligned with the environmental and social characteristics is disclosed under the section below headed "What was the proportion of sustainability-related investments?". The objectives of the sustainable investments are set out under the heading "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The Investment Manager used two indicators to measure the environmental and social characteristics of the product as follows:

- The weighted average ESG rating of the product, as determined by the use of ESG ratings of companies, supplied by an external data provider of ESG research and ratings.
- The carbon intensity of the product measured by an external provider of carbon footprint measurement services.

The following shows how each indicator performed during the reference period under review. Each measure was calculated based on the portfolio holdings and relevant metric at the end of the period under review.

| Sustainability Indicator | 2024 | 2023 |
|--|------------------------------------|------------------------------------|
| Weighted Average MSCI ESG Score of the portfolio | 7.2 | 7.7 |
| Weighted Average Carbon Intensity of the portfolio | 56.9 tons CO2e / million USD sales | 66.7 tons CO2e / million USD sales |

...and compared to previous periods?

See table in the section headed "How did the sustainability indicators perform?".

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

This product invests partially in sustainable investments.

The objectives of these sustainable investments are the the reduction in harm to the environment and climate arising from the emissions of greenhouse gases and better corporate practices that contribute to a more just society by, for example, enhancing human capital or providing improved social opportunities to services such as finance, health care, and communications.

The sustainable investments contributed to these objectives through the reduction in the carbon intensity of the portfolio and through the promotion of improved corporate practices that contribute to a more just society.

Please refer to the section above headed "How did the sustainability indicators perform?" for more detail on the indicators used to assess the contribution to the objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments of the product were assessed to ensure that they do not cause significant harm to any environmental or social objective. This assessment made use of Principal Adverse Impact Indicators ("PAI Indicators"), where applicable and where data was sufficiently available, and ensured that certain minimum standards were reached for each applicable PAI Indicator.

The following PAI Indicators were used throughout the period under review.

| PAI Indicator | Explanation | 2024 | 2023 |
|------------------|---|--------------------|--------------------|
| 1. GHG Emissions | Sum of portfolio companies' Carbon Emissions - Scope 1 (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 1,080 tons CO2e | 1,746 tons CO2e |

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

| | Sum of portfolio companies' Carbon Emissions - | | |
|--|--|--|--|
| 1. GHG Emissions | Scope 2 (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 358 tons CO2e | 509 tons CO2e |
| 1. GHG Emissions | Sum of portfolio companies' Scope 3 - Total Emission Estimated (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 15,742 tons CO2e | 23,445 tons CO2e |
| 1. GHG Emissions | The total annual Scope 1, Scope 2, and estimated Scope 3 GHG emissions associated with the market value of the portfolio. Companies' carbon emissions are apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 17,505 tons CO2e | 25,700 tons CO2e |
| 2. Carbon Footprint | Sum of portfolio companies' Total GHG Emissions (Scopes 1, 2 and 3) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash, adjusted to show the emissions associated with 1 million EUR invested in the portfolio. | 616 tons CO2e / million EUR invested | 803 tons CO2e / million EUR invested |
| 3. GHG Intensity of investee companies | The portfolio's weighted average of its holding issuers' GHG Intensity (Scope 1, Scope 2 and estimated Scope 3 GHG emissions/EUR million revenue). | 582 tons CO2e / million EUR sales | 709 tons CO2e / million EUR sales |
| 4. Exposure to companies active in the fossil fuel sector | The percentage of the portfolio's market value exposed to issuers with fossil fuels related activities, including extraction, processing, storage and transportation of petroleum products, natural gas, and thermal and metallurgical coal. | 6.7% | 9.1% |
| 5. Share of non- renewable energy consumption and production | The portfolio's weighted average of issuers' energy consumption and/or production from non-renewable sources as a percentage of total energy used and/or generated. | 71.9% | 64.6% |
| 6. Energy consumption intensity per high impact climate sector: a. NACE Code A (Agriculture, Forestry and Fishing) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code A | 0 GWh / million EUR revenue | 0 GWh / million EUR revenue |
| b. NACE Code B (Mining and Quarrying) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code B | 0.28 GWh / million EUR revenue | 1.59 GWh / million EUR revenue |
| c. NACE Code C (Manufacturing) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code C | 0.44 GWh / million EUR revenue | 0.46 GWh / million EUR revenue |
| d. NACE Code D (Electricity, Gas, Steam and Air Conditioning Supply) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code D | 1.37 GWh / million EUR revenue | 1.6 GWh / million EUR revenue |
| e. NACE Code E (Water Supply, Sewerage, Waste Management and Remediation Activities) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code E | 0 GWh / million EUR revenue | 0 GWh / million EUR revenue |

| f. NACE Code F (Construction) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code F | 0.02 GWh / million EUR revenue | 0 GWh / million EUR revenue |
|---|---|---|---|
| g. NACE Code G (Wholesale and Retail Trade Repair of Motor Vehicles and Motorcycles) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code G | 0.11 GWh / million EUR revenue | 0.05 GWh / million EUR revenue |
| h. NACE Code H (Transportation and Storage) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code H | 0.19 GWh / million EUR revenue | 0.24 GWh / million EUR revenue |
| i. NACE Code L (Real estate activities) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code L | 0.4 GWh / million EUR revenue | 0.37 GWh / million EUR revenue |
| 7. Activities negatively affecting biodiversity-sensitive areas | The percentage of the portfolio's market value exposed to issuers' that reported having operations in or near biodiversity sensitive areas and have been implicated in controversies with severe or very severe impacts on the environment. | 0% | 0% |
| 8. Emissions to Water | The total annual wastewater discharged (metric tons reported) into surface waters as a result of industrial or manufacturing activities associated with 1 million EUR invested in the portfolio. Companies' water emissions are apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 0.25 metric tons / million EUR invested | 0.06 metric tons / million EUR invested |
| 9. Hazardous waste ratio | The total annual hazardous waste (metric tons reported) associated with 1 million EUR invested in the portfolio. Companies' hazardous waste is apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 0.14 metric tons / million EUR invested | 0.58 metric tons / million EUR invested |
| 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers with very severe controversies related to the company's operations and/or products. | 0% | 0.1% |
| 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers that have at least one policy covering some of the UNGC principles or OECD Guidelines for Multinational Enterprises and either a monitoring system evaluating compliance with such policy or a grievance/complaints handling mechanism. | 0.7% | 45.7% |
| 12. Unadjusted gender pay gap | The portfolio holdings' weighted average of the difference between the average gross hourly earnings of male and female employees, as a percentage of male gross earnings. | 15.2% | 14.4% |

| 13. Board gender diversity | The portfolio holdings' weighted average of the percentage of board members who are female. For companies with a two-tier board, the calculation is based on members of the Supervisory Board only. | 37% | 37.1% |
|--|--|-------|-------|
| 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | The percentage of the portfolio's market value exposed to issuers with an industry tie to landmines, cluster munitions, chemical weapons or biological weapons. Note: Industry ties includes ownership, manufacturing and investments. Ties to landmines do not include related safety products. | 0% | 0% |
| 15. Investments in companies without carbon emission reduction initiatives | The percentage of the portfolio's market value exposed to issuers without a carbon emissions reduction target. | 44.4% | 27.3% |
| 16. Investments in companies without workplace accident prevention policies | The percentage of the portfolio's market value exposed to issuers without a workplace accident prevention policy. | 1.8% | 2% |

Note that in the PAI Indicators table above, for items 6a to 6i, there may be no investments in companies in the relevant NACE sector or there may be no data available for any companies in the relevant NACE sector. In such cases the table will show a value of 0 GWh / million EUR revenue.

How were the indicators for adverse impacts on sustainability factors taken into account?

The indicators for adverse impacts on sustainability factors were taken into account by applying certain exclusion strategies aligned to the PAI Indicators and by monitoring the PAI Indicators in the following manner:

- 1. When ensuring that a sustainable investment did not cause significant harm to any environmental or social objective, the Investment Manager made use of various PAI Indicators. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail. The Investment Manager ensured that certain minimum standards were reached for each applicable PAI Indicator.
- 2. The product did not invest in companies materially engaged in certain activities which, in the opinion of the Investment Manager, are associated with a particularly adverse impact on sustainability. These included companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, and companies with a high degree of involvement in coal extraction or coal-fired electricity generation.
- 3. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact (as measured by the PAI Indicators and by other

factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact. Please refer to the section below headed "What actions have been taken to meet the environmental and/or social characteristics during the reference period?" for more detail.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, the sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights through the use of environmental and UNGC (UN Global Compact) controversies screening as an indication for alignment with OECD guidelines / UN guiding principles along with other tools including ESG scores and research as part of the investment.

The product did not invest in any company which violates, repeatedly and seriously, one or more of the ten principles of the UN Global Compact. To implement this, the Investment Manager used data from data providers which rely on international conventions such as the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, as sources of data to determine risk exposure of companies' geographies of operation and business segments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Over the reference period, the product considered principal adverse impacts on sustainability factors. This was done in the following manner:

1. A minimum proportion of the investments held in this product must be sustainable investments. In determining whether an investment was a

sustainable investment, a number of PAI Indicators were used and where the adverse impact was considered to be excessive, in the judgement of the Investment Manager, based on whether the adverse impact breaches certain thresholds set by the Investment Manager, such investments were not deemed to be sustainable investments. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail.

- The Investment Manager's decision on whether to make an investment in a
 company, and the size of that investment, took into account the PAI Indicators
 (referred to above) relating to the social, environmental and governance
 characteristics of that company, including the adverse impact that the company
 had on sustainability.
- 3. The product did not invest in companies engaged in certain activities which, in the opinion of the Investment Manager, were associated with a particularly adverse impact on sustainability, in excess of certain thresholds. These included companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, and companies with a high degree of involvement in coal extraction or coal-fired electricity generation.
- 4. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact, with a view to influencing the company to change its activities in a manner which will reduce the adverse impact.

What were the top investments of this financial product?

The following sets out a list of the top investments (and relevant sector) of the financial product using the Global Industry Classification Standard (GICS). GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure.

The data presented in this section shows the top 15 investments (ie the greatest proportion of investments of the product) during the reference period and has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments (which were not used to promote the environmental and social characteristics of the product) are not included in the table below.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 year to end August 2024

| Largest Investments | Sector | % Assets | Country |
|--|------------------------|----------|----------------------|
| Microsoft Corporation | INFORMATION TECHNOLOGY | 4.1 | United States |
| Accenture Plc | INFORMATION TECHNOLOGY | 2.9 | United States |
| Best Buy Company Inc | CONSUMER DISCRETIONARY | 2.9 | United States |
| Cisco Systems Inc | INFORMATION TECHNOLOGY | 2.8 | United States |
| Lam Research Corporation | INFORMATION TECHNOLOGY | 2.7 | United States |
| Cigna Group | HEALTH CARE | 2.7 | United States |
| Bank of Nova Scotia | FINANCIALS | 2.6 | Canada |
| Interpublic Group Of Companies Inc | COMMUNICATION SERVICES | 2.6 | United States |
| Omnicom Group Inc | COMMUNICATION SERVICES | 2.6 | United States |
| Netapp Inc | INFORMATION TECHNOLOGY | 2.6 | United States |
| QUALCOMM Inc | INFORMATION TECHNOLOGY | 2.6 | United States |
| Morgan Stanley | FINANCIALS | 2.5 | United States |
| Masco Corp | INDUSTRIALS | 2.5 | United States |
| Cognizant Technology Solutions Corp | INFORMATION TECHNOLOGY | 2.5 | United States |
| Marathon Petroleum Corp | ENERGY | 2.5 | United States |

What was the proportion of sustainability-related investments?

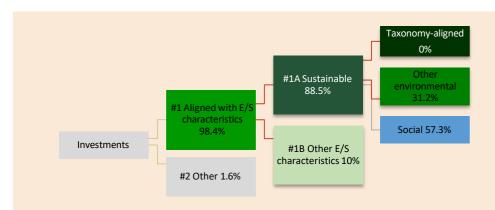

Information on the proportion of the product which promoted environmental/social characteristics and the proportion of the product invested in sustainable investments during the reference period is provided below.

What was the asset allocation?

Based on data as at 31 August 2024, 98.4% of the investments of the product were used to meet the environmental and social characteristics promoted by the product in accordance with the binding elements of the investment strategy. The proportion of the portfolio which was invested in Sustainable Investments was 88.5%.

The remaining portion of investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including ESG-related exclusions.

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#20ther includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In the previous reference period, the proportion of the product's assets invested in environmentally sustainable activities was 40.4%. It should be noted that in this reference period only a minority of investee companies are required to report the proportion of their revenues that are aligned with the EU Taxonomy.

In which economic sectors were the investments made?

The following table consists of the product's exposure to sub-industries. For the purpose of the table, the Global Industry Classification Standard (GICS) has been used. GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure. The table below shows the composition of the investments held by the product, by GICS sector during the reference period. The data presented has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments are not included in the table below.

| Sector | % Assets |
|------------------------|----------|
| COMMUNICATION SERVICES | 8.5 |
| CONSUMER DISCRETIONARY | 10.9 |
| CONSUMER STAPLES | 3.8 |
| ENERGY | 5.1 |
| FINANCIALS | 15.3 |
| HEALTH CARE | 11.4 |
| INDUSTRIALS | 10.1 |
| INFORMATION TECHNOLOGY | 27.4 |
| MATERIALS | 2 |
| REAL ESTATE | 2.8 |
| UTILITIES | 1.5 |
| | |

Note: EXPOSURE TO COMPANIES ACTIVE IN THE FOSSIL FUEL SECTOR (i.e. the percentage of the product's market value exposed to issuers with fossil fuels related activities, including extraction, processing, storage and transportation of petroleum products, natural gas, and thermal and metallurgical coal)

6.7%

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of sustainable investments aligned with the EU Taxonomy was 0%.

In order to attain the environmental characteristics promoted by this product, the product invested in sustainable investments even though such investments did not meet all of the detailed criteria for "environmentally sustainable investments" within the meaning of the Taxonomy Regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

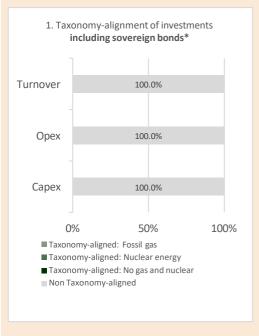

| | Yes: | | |
|---|------|---------------|-------------------|
| | | In fossil gas | In nuclear energy |
| X | No | | |

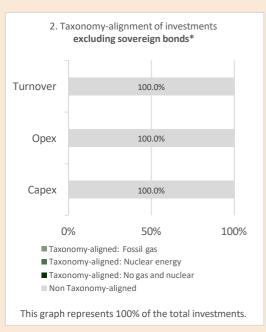

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflects the "greenness" of investee companies today.
- capital
 expenditure
 (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.
- What was the share of investments made in transitional and enabling activities?

The share of investments in transitional activities was 0% of the product's assets.

The share of investments in enabling activities was 0% of the product's assets.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage of investments that were aligned with the EU Taxonomy was 0% in the current reference period.

The percentage of investments that were aligned with the EU Taxonomy was 0% in the previous reference period.

The product invested 31.2% of its assets in sustainable investments with environmental characteristics which did not qualify as environmentally sustainable under the EU Taxonomy.

What was the share of socially sustainable investments?

The product invested 57.3% of its assets in socially sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

11.5% of investments were not classified as sustainable investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including the exclusion of companies involved with certain controversial activities, and the exclusion of companies that violate, repeatedly and seriously, one or more of the ten principles of the UN Global Compact.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken to achieve the environmental and social characteristics were:

- The Investment Manager integrated an analysis of companies' ESG performance into its investment analysis and investment decisions. Companies were rated on an AAA-CCC scale relative to the standards and performance of their industry peers, which was then translated into an ESG score. The Investment Manager got a single ESG score for each stock from MSCI ESG Research (the "Data Provider"), each stock receiving a score of between 0 and 10, with the highest scoring company receiving a 10. The Investment Manager favoured higher score stocks where possible and its aim was for the portfolio to have an equal or higher weighted ESG score than its comparable benchmark.
- The portfolio construction process excluded holdings deemed inconsistent with the Investment Manager's Responsible Investment Policy or that were involved with certain controversial sectors, as determined by the Investment Manager's Responsible Investing Committee. Further, the product did not invest in companies involved in certain activities including tobacco manufacturing, coal extraction and coal-fired electricity generation, in excess of certain thresholds.
- The Investment Manager collaborated on 19 topics and engaged with 9 companies on a range of issues, including engagement with companies which had high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact.

How did this financial product perform compared to the reference benchmark? Not applicable

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the product.

- How does the reference benchmark differ from a broad market index?
 Not Applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
 Not applicable.
- How did this financial product perform compared with the broad market index?
 Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: KBI Integris Global Equity Fund (the "product")

Legal entity identifier: 635400TGP4FDDCXYFS46

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective? Yes It made **sustainable** It promoted Environmental/Social (E/S) characteristics and investments with an while it did not have as its objective a environmental objective: ___% sustainable investment, it had a proportion of in economic activities that 93.6% of sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in economic Taxonomy activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally with an environmental objective in Χ sustainable under the EU economic activities that do not qualify as Taxonomy environmentally sustainable under the EU Taxonomy with a social objective Χ It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: ___%

investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in

Regulation (EU)

2020/852,

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the

establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics promoted by the product were reductions in harm to the environment and climate arising from the emissions of greenhouse gases and better corporate practices that contribute to a more just society, by, for example, enhancing human capital or providing improved social opportunities to services such as finance, health care, and communications.

The Investment Manager used a range of sustainability indicators to measure the extent to which the environmental and social characteristics of the product were met. Investors should refer to the next section below for an assessment of how the sustainability indicators performed during the reference period.

The product was managed with the aim of progressively reducing net carbon emissions of investee companies and of eventually reaching net zero emissions by 2050. The product also sought to have a carbon intensity level lower than the Index. The Investment Manager monitored the carbon intensity of companies in which the product invested. Carbon intensity is a measure of greenhouse gas emissions, in tonnes, relative to the revenue of the company or portfolio. The Investment Manager obtained carbon intensity data from the Data Provider.

The environmental objectives to which the sustainable investments contributed were climate change mitigation and climate change adaptation.

While the product promotes carbon emission reduction and better corporate practices, investors should be aware that this product does not have reduction of carbon emissions as its objective within the meaning of Article 9(3) of SFDR. Further, the investment strategy of the product is not continuously aligned with the Index and the Index is not used for the purpose of determining the attainment of the environmental and social characteristics promoted by the product. The Index is a broad market index and is not aligned with the environmental and social characteristics promoted by the product.

The extent of the product's impact is further described in the section below headed "How did this financial product consider principal adverse impacts on sustainability factors?". The proportion of the product that was aligned with the environmental and social characteristics is disclosed under the section below headed "What was the proportion of sustainability-related investments?". The objectives of the sustainable investments are set out under the heading "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability
indicators measure
how the
environmental or
social
characteristics
promoted by the
financial product
are attained.

How did the sustainability indicators perform?

The Investment Manager used two indicators to measure the environmental and social characteristics of the product as follows:

- The weighted average ESG rating of the product, as determined by the use of ESG ratings of companies, supplied by an external data provider of ESG research and ratings.
- The carbon intensity of the product measured by an external provider of carbon footprint measurement services.

The following shows how each indicator performed during the reference period under review. Each measure was calculated based on the portfolio holdings and relevant metric at the end of the period under review.

| Sustainability Indicator | 2024 | 2023 |
|--|------------------------------------|---------------------------------------|
| Weighted Average MSCI ESG Score of the portfolio | 7.6 | 7.8 |
| Weighted Average Carbon Intensity of the portfolio | 47.8 tons CO2e / million USD sales | 51.6 tons CO2e / million USD sales |

...and compared to previous periods?

See table in the section headed "How did the sustainability indicators perform?".

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

This product invests partially in sustainable investments.

The objectives of these sustainable investments are the the reduction in harm to the environment and climate arising from the emissions of greenhouse gases and better corporate practices that contribute to a more just society by, for example, enhancing human capital or providing improved social opportunities to services such as finance, health care, and communications.

The sustainable investments contribute to these objectives through the reduction in the carbon intensity of the portfolio and through the promotion of improved corporate practices that contribute to a more just society. Please refer to the section above headed "How did the sustainability indicators perform?" for more detail on the indicators used to assess the contribution to the objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments of the product were assessed to ensure that they do not cause significant harm to any environmental or social objective. This assessment made use of Principal Adverse Impact Indicators ("PAI Indicators"), where applicable and where data was sufficiently available, and ensured that certain minimum standards were reached for each applicable PAI Indicator.

The following PAI Indicators were used throughout the period under review.

| PAI Indicator | Explanation | 2024 | 2023 |
|------------------|---|---------------|--------------------|
| 1. GHG Emissions | Sum of portfolio companies' Carbon Emissions - Scope 1 (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 919 tons CO2e | 1,174 tons CO2e |

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

| | Sum of portfolio companies' Carbon Emissions - | | |
|--|--|--|--|
| 1. GHG Emissions | Scope 2 (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 370 tons CO2e | 522 tons CO2e |
| 1. GHG Emissions | Sum of portfolio companies' Scope 3 - Total Emission Estimated (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 14,324 tons CO2e | 21,552 tons CO2e |
| 1. GHG Emissions | The total annual Scope 1, Scope 2, and estimated Scope 3 GHG emissions associated with the market value of the portfolio. Companies' carbon emissions are apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 15,648 tons CO2e | 23,250 tons CO2e |
| 2. Carbon Footprint | Sum of portfolio companies' Total GHG Emissions (Scopes 1, 2 and 3) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash, adjusted to show the emissions associated with 1 million EUR invested in the portfolio. | 430 tons CO2e / million EUR invested | 422 tons CO2e / million EUR invested |
| 3. GHG Intensity of investee companies | The portfolio's weighted average of its holding issuers' GHG Intensity (Scope 1, Scope 2 and estimated Scope 3 GHG emissions/EUR million revenue). | 615 tons CO2e / million EUR sales | 587 tons CO2e / million EUR sales |
| 4. Exposure to companies active in the fossil fuel sector | The percentage of the portfolio's market value exposed to issuers with fossil fuels related activities, including extraction, processing, storage and transportation of petroleum products, natural gas, and thermal and metallurgical coal. | 4.1% | 5.3% |
| 5. Share of non- renewable energy consumption and production | The portfolio's weighted average of issuers' energy consumption and/or production from non-renewable sources as a percentage of total energy used and/or generated. | 71.1% | 69.3% |
| 6. Energy consumption intensity per high impact climate sector: a. NACE Code A (Agriculture, Forestry and Fishing) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code A | 0 GWh / million EUR revenue | 0 GWh / million EUR revenue |
| b. NACE Code B (Mining and Quarrying) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code B | 0.54 GWh / million EUR revenue | 0.57 GWh / million EUR revenue |
| c. NACE Code C (Manufacturing) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code C | 0.39 GWh / million EUR revenue | 0.34 GWh / million EUR revenue |
| d. NACE Code D (Electricity, Gas, Steam and Air Conditioning Supply) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code D | 1.93 GWh / million EUR revenue | 3.23 GWh / million EUR revenue |
| e. NACE Code E (Water Supply, Sewerage, Waste Management and Remediation Activities) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code E | 0 GWh / million EUR revenue | 0 GWh / million EUR revenue |

| f. NACE Code F (Construction) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code F | 0.05 GWh / million EUR revenue | 0.06 GWh / million EUR revenue |
|---|---|---|---|
| g. NACE Code G (Wholesale and Retail Trade Repair of Motor Vehicles and Motorcycles) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code G | 0.12 GWh / million EUR revenue | 0.12 GWh / million EUR revenue |
| h. NACE Code H (Transportation and Storage) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code H | 0.34 GWh / million EUR revenue | 0.33 GWh / million EUR revenue |
| i. NACE Code L (Real estate activities) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code L | 0.18 GWh / million EUR revenue | 0.27 GWh / million EUR revenue |
| 7. Activities negatively affecting biodiversity-sensitive areas | The percentage of the portfolio's market value exposed to issuers' that reported having operations in or near biodiversity sensitive areas and have been implicated in controversies with severe or very severe impacts on the environment. | 0% | 0% |
| 8. Emissions to Water | The total annual wastewater discharged (metric tons reported) into surface waters as a result of industrial or manufacturing activities associated with 1 million EUR invested in the portfolio. Companies' water emissions are apportioned across all outstanding shares and bonds (based on the most recently available | 0.17 metric tons / million EUR invested | 0.06 metric tons / million EUR invested |
| 9. Hazardous waste ratio | enterprise value including cash). The total annual hazardous waste (metric tons reported) associated with 1 million EUR invested in the portfolio. Companies' hazardous waste is apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 0.22 metric tons / million EUR invested | 1.19 metric tons / million EUR invested |
| 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers with very severe controversies related to the company's operations and/or products. | 0% | 0.1% |
| 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers that have at least one policy covering some of the UNGC principles or OECD Guidelines for Multinational Enterprises and either a monitoring system evaluating compliance with such policy or a grievance/complaints handling mechanism. | 0.9% | 44.5% |
| 12. Unadjusted gender pay gap | The portfolio holdings' weighted average of the difference between the average gross hourly earnings of male and female employees, as a percentage of male gross earnings. | 15.8% | 17.3% |

| 13. Board gender diversity | The portfolio holdings' weighted average of the percentage of board members who are female. For companies with a two-tier board, the calculation is based on members of the Supervisory Board only. | 36.8% | 36.2% |
|--|--|-------|-------|
| 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | The percentage of the portfolio's market value exposed to issuers with an industry tie to landmines, cluster munitions, chemical weapons or biological weapons. Note: Industry ties includes ownership, manufacturing and investments. Ties to landmines do not include related safety products. | 0% | 0% |
| 15. Investments in companies without carbon emission reduction initiatives | The percentage of the portfolio's market value exposed to issuers without a carbon emissions reduction target. | 43.8% | 22.1% |
| 16. Investments in companies without workplace accident prevention policies | The percentage of the portfolio's market value exposed to issuers without a workplace accident prevention policy. | 2.3% | 4.6% |

Note that in the PAI Indicators table above, for items 6a to 6i, there may be no investments in companies in the relevant NACE sector or there may be no data available for any companies in the relevant NACE sector. In such cases the table will show a value of 0 GWh / million EUR revenue.

How were the indicators for adverse impacts on sustainability factors taken into account?

The indicators for adverse impacts on sustainability factors were taken into account by applying certain exclusion strategies aligned to the PAI Indicators and by monitoring the PAI Indicators in the following manner:

- 1. When ensuring that a sustainable investment did not cause significant harm to any environmental or social objective, the Investment Manager made use of various PAI Indicators. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail. The Investment Manager ensured that certain minimum standards were reached for each applicable PAI Indicator.
- 2. The product did not invest in companies materially engaged in certain activities which, in the opinion of the Investment Manager, are associated with a particularly adverse impact on sustainability. These included companies with any involvement in certain types of controversial weapons, or with a high degree of involvement in coal extraction or coal-fired electricity generation, or with revenue in excess of certain thresholds from tobacco manufacturing, gambling, adult entertainment, stem cell research or recreational cannabis, or which own fossil fuel reserves, or that conduct animal testing for non-pharmaceutical products, or with any tie to abortion.

3. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact. Please refer to the section below headed "What actions have been taken to meet the environmental and/or social characteristics during the reference period?" for more detail.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, the sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights through the use of environmental and UNGC (UN Global Compact) controversies screening as an indication for alignment with OECD guidelines / UN guiding principles along with other tools including ESG scores and research as part of the investment.

The product did not invest in any company which violates, repeatedly and seriously, one or more of the ten principles of the UN Global Compact. To implement this, the Investment Manager used data from data providers which rely on international conventions such as the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, as sources of data to determine risk exposure of companies' geographies of operation and business segments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Over the reference period, the product considered principal adverse impacts on sustainability factors. This was done in the following manner:

- 1. A minimum proportion of the investments held in this product must be sustainable investments. In determining whether an investment was a sustainable investment, a number of PAI Indicators were used and where the adverse impact was considered to be excessive, in the judgement of the Investment Manager, based on whether the adverse impact breaches certain thresholds set by the Investment Manager, such investments were not deemed to be sustainable investments. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail.
- The Investment Manager's decision on whether to make an investment in a
 company, and the size of that investment, took into account the PAI Indicators
 (referred to above) relating to the social, environmental and governance
 characteristics of that company, including the adverse impact that the company
 had on sustainability.
- 3. The product did not invest in companies engaged in certain activities which, in the opinion of the Investment Manager, were associated with a particularly adverse impact on sustainability, in excess of certain thresholds. These included companies with any involvement in certain types of controversial weapons, or with a high degree of involvement in coal extraction or coal-fired electricity generation, or with revenue in excess of certain thresholds from tobacco manufacturing, gambling, adult entertainment, stem cell research or recreational cannabis, or which own fossil fuel reserves, or that conduct animal testing for non-pharmaceutical products, or with any tie to abortion.
- 4. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact, with a view to influencing the company to change its activities in a manner which will reduce the adverse impact.

What were the top investments of this financial product?

The following sets out a list of the top investments (and relevant sector) of the financial product using the Global Industry Classification Standard (GICS). GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure.

The data presented in this section shows the top 15 investments (ie the greatest proportion of investments of the product) during the reference period and has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments (which were not used to promote the environmental and social characteristics of the product) are not included in the table below.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 year to end August 2024

| Largest Investments Accenture Plc | Sector INFORMATION TECHNOLOGY | % Assets | Country |
|--|-------------------------------|----------|----------------------|
| A security we Dis | INFORMATION TECHNOLOGY | | |

What was the proportion of sustainability-related investments?

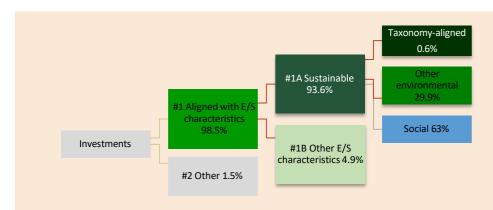

Information on the proportion of the product which promoted environmental/social characteristics and the proportion of the product invested in sustainable investments during the reference period is provided below.

What was the asset allocation?

Based on data as at 31 August 2024, 98.5% of the investments of the product were used to meet the environmental and social characteristics promoted by the product in accordance with the binding elements of the investment strategy. The proportion of the portfolio which was invested in Sustainable Investments was 93.6%.

The remaining portion of investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including ESG-related exclusions.

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#20ther includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In the previous reference period, the proportion of the product's assets invested in environmentally sustainable activities was 42.4%. It should be noted that in this reference period only a minority of investee companies are required to report the proportion of their revenues that are aligned with the EU Taxonomy.

Proportion of investments contributing to EU Taxonomy objectives:

| | Climate change mitigation | Climate change adaptation |
|------------------|---------------------------|---------------------------|
| As % of Turnover | 0.6% | 0% |
| As % of Capex | 1.2% | 0% |
| As % of Opex | 0.9% | 0.1% |

In which economic sectors were the investments made?

The following table consists of the product's exposure to sub-industries. For the purpose of the table, the Global Industry Classification Standard (GICS) has been used. GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure. The table below shows the composition of the investments held by the product, by GICS sector during the reference period. The data presented has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments are not included in the table below.

| Sector | % Assets |
|------------------------|----------|
| COMMUNICATION SERVICES | 7.9 |
| CONSUMER DISCRETIONARY | 14 |
| CONSUMER STAPLES | 6.1 |

| ENERGY | 0 |
|--|------|
| FINANCIALS | 22.4 |
| HEALTH CARE | 2.6 |

| UTILITIES | 1.8 |
| | |
| Note: EXPOSURE TO COMPANIES ACTIVE IN THE FOSSIL FUEL | |
| SECTOR (i.e. the percentage of the product's market value | |
| exposed to issuers with fossil fuels related activities, including | 4.1% |
| extraction, processing, storage and transportation of petroleum | |
| products, natural gas, and thermal and metallurgical coal) | |

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of sustainable investments aligned with the EU Taxonomy was 0.6%.

The environmental objectives to which the sustainable investments contributed were climate change mitigation and climate change adaptation.

In order to attain the environmental characteristics promoted by this product, the product invested in sustainable investments even though some investments did not meet all of the detailed criteria for "environmentally sustainable investments" within the meaning of the Taxonomy Regulation.

| Did the financial product invest in fossil gas and/or nuclear energy re | elated |
|---|--------|
| activities complying with the EU Taxonomy ¹ ? | |

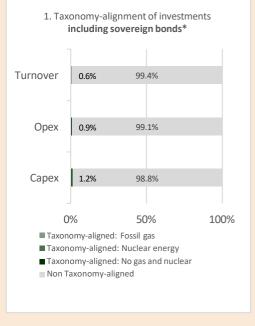

| | Yes: | | |
|---|------|---------------|-------------------|
| | | In fossil gas | In nuclear energy |
| X | No | | |

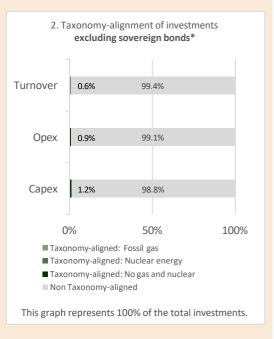

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflects the "greenness" of investee companies today.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.
- What was the share of investments made in transitional and enabling activities?

Investments in environmentally sustainable economic activities:

| | Transitional | Enabling |
|------------------|--------------|----------|
| As % of Turnover | 0% | 0.4% |
| As % of Capex | 0% | 0.7% |
| As % of Opex | 0% | 0.6% |

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage of investments that were aligned with the EU Taxonomy was 0.6% in the current reference period.

The percentage of investments that were aligned with the EU Taxonomy was 0% in the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The product invested 29.9% of its assets in sustainable investments with environmental characteristics which did not qualify as environmentally sustainable under the EU Taxonomy.

What was the share of socially sustainable investments?

The product invested 63% of its assets in socially sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

6.4% of investments were not classified as sustainable investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including the exclusion of companies involved with certain controversial activities, and the exclusion of companies that violate, repeatedly and seriously, one or more of the ten principles of the UN Global Compact.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken to achieve the environmental and social characteristics were:

• The Investment Manager integrated an analysis of companies' ESG performance into its investment analysis and investment decisions. Companies were rated on an AAA-CCC scale relative to the standards and performance of their industry peers, which was then translated into an ESG score. The Investment Manager got a single ESG score for each stock from MSCI ESG Research (the "Data Provider"), each stock receiving a score of between 0 and 10, with the highest scoring company receiving a 10. The Investment Manager favoured higher score stocks where possible and its aim was for the portfolio to have an equal or higher weighted ESG score than its comparable benchmark.

- The portfolio construction process excluded holdings deemed inconsistent with the Investment Manager's Responsible Investment Policy or that were involved with certain controversial sectors, as determined by the Investment Manager's Responsible Investing Committee.
- Further, the product did not invest in companies involved in certain activities including tobacco manufacturing, coal extraction and coal-fired electricity generation, in excess of certain thresholds.
- The Investment Manager collaborated on 19 topics and engaged with 18 companies on a range of issues, including engagement with companies which had high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact.

How did this financial product perform compared to the reference benchmark? Not applicable

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the product.

- How does the reference benchmark differ from a broad market index?
 Not Applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
 Not applicable.
- How did this financial product perform compared with the broad market index?
 Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: KBI Global Sustainable Infrastructure Fund (the "product")

Legal entity identifier: 635400XMNMFKOYHZQ883

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective? Yes It made **sustainable** It promoted Environmental/Social (E/S) characteristics and investments with an while it did not have as its objective a environmental objective: ___% sustainable investment, it had a proportion of in economic activities that 93.3% of sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in economic Taxonomy activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally with an environmental objective in Χ sustainable under the EU economic activities that do not qualify as Taxonomy environmentally sustainable under the EU Taxonomy with a social objective Χ It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: ___%

investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification

system laid down in

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the

Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be

aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics promoted by the product were the provision of sustainable infrastructure facilities and related services. The provision of such sustainable infrastructure and services assists, in the opinion of the Investment Manager, the transition to a lower carbon economy and improves the availability of safe water and food and improves the provision of socially beneficial infrastructure and related services.

This was achieved by investing in a portfolio of companies which, in the opinion of the Investment Manager, generate on an aggregate portfolio basis a substantial proportion of their turnover from the sustainable infrastructure sector, including but not limited to the supply or treatment of water, waste water and energy, the provision or maintenance or enhancement of energy or water infrastructure such as energy generation facilities and equipment or water treatment facilities, the provision, maintenance or enhancement of infrastructure designed to support the production and efficient distribution of food and crops, and the provision, maintenance or enhancement of other socially beneficial infrastructure. The Investment Manager used a range of sustainability indicators to measure the extent to which the environmental and social characteristics of the product were met. Investors should refer to the next section below for an assessment of how the sustainability indicators performed during the reference period.

The product was managed with the aim of progressively reducing net carbon emissions of investee companies and of eventually reaching net zero emissions by 2050. The Investment Manager monitored the carbon intensity of companies in which the product invested. Carbon intensity is a measure of greenhouse gas emissions, in tonnes, relative to the revenue of the company or portfolio. The Investment Manager obtained carbon intensity data from the Data Provider.

While the product promoted carbon emission reduction and better corporate practices, investors should be aware that this product does not have reduction of carbon emissions as its objective within the meaning of Article 9(3) of SFDR.

The environmental objectives to which the sustainable investments contributed were climate change mitigation and climate change adaptation.

The extent of the product's impact is further described in the section below headed "How did this financial product consider principal adverse impacts on sustainability factors?". The proportion of the product that was aligned with the environmental and social characteristics is disclosed under the section below headed "What was the proportion of sustainability-related investments?". The objectives of the sustainable investments are set out under the heading "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The Investment Manager used three indicators to measure the environmental and social characteristics of the product as follows:

- The percentage of revenues earned on an estimated basis by investee companies which are from the sustainable infrastructure sector.
- The weighted average ESG rating of the product, as determined by the use of ESG ratings of companies, supplied by an external data provider of ESG research and ratings.

• The carbon intensity of the product measured by an external provider of carbon footprint measurement services.

The following shows how each indicator performed during the reference period under review. Each measure was calculated based on the portfolio holdings and relevant metric at the end of the period under review.

| Sustainability Indicator | 2024 | 2023 |
|--|-------------------------------------|-------------------------------------|
| Percentage (estimated) of revenues earned by investee companies from the sustainable infrastructure sector | 73.8% | 77.7% |
| Weighted Average MSCI ESG Score of the portfolio | 7.4 | 7.5 |
| Weighted Average Carbon Intensity of the portfolio | 461.8 tons CO2e / million USD sales | 572.2 tons CO2e / million USD sales |

...and compared to previous periods?

See table in the section headed "How did the sustainability indicators perform?".

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

This product invests partially in sustainable investments.

The objectives of these sustainable investments are the provision of sustainable infrastructure facilities and related services.

The sustainable investments contributed to these objectives through the provision, maintenance or enhancement of infrastructure relating to the supply or treatment of water and waste water, the provision or maintenance or enhancement of energy infrastructure such as energy generation facilities and equipment, and the provision, maintenance or enhancement of infrastructure designed to support the production and efficient distribution of food and crops, or of other socially beneficial infrastructure.

Please refer to the section above headed "How did the sustainability indicators perform?" for more detail on the indicators used to assess the contribution to the objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments of the product were assessed to ensure that they do not cause significant harm to any environmental or social objective. This assessment made use of Principal Adverse Impact Indicators ("PAI Indicators"), where applicable and where data was sufficiently available, and ensured that certain minimum standards were reached for each applicable PAI Indicator.

The following PAI Indicators were used throughout the period under review.

| PAI Indicator | Explanation | 2024 | 2023 |
|---|--|--|--|
| 1. GHG Emissions | Sum of portfolio companies' Carbon Emissions - Scope 1 (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 263,256 tons CO2e | 292,954 tons CO2e |
| 1. GHG Emissions | Sum of portfolio companies' Carbon Emissions - Scope 2 (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 22,246 tons CO2e | 31,132 tons CO2e |
| 1. GHG Emissions | Sum of portfolio companies' Scope 3 - Total Emission Estimated (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 589,065 tons CO2e | 566,932 tons CO2e |
| 1. GHG Emissions | The total annual Scope 1, Scope 2, and estimated Scope 3 GHG emissions associated with the market value of the portfolio. Companies' carbon emissions are apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 874,546 tons CO2e | 890,986 tons CO2e |
| 2. Carbon Footprint | Sum of portfolio companies' Total GHG Emissions (Scopes 1, 2 and 3) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash, adjusted to show the emissions associated with 1 million EUR invested in the portfolio. | 724 tons CO2e / million EUR invested | 567 tons CO2e / million EUR invested |
| 3. GHG Intensity of investee companies | The portfolio's weighted average of its holding issuers' GHG Intensity (Scope 1, Scope 2 and estimated Scope 3 GHG emissions/EUR million revenue). | 1,257 tons CO2e / million EUR sales | 1,151 tons CO2e / million EUR sales |
| 4. Exposure to companies active in the fossil fuel sector | The percentage of the portfolio's market value exposed to issuers with fossil fuels related activities, including extraction, processing, storage and transportation of petroleum products, natural gas, and thermal and metallurgical coal. | 29% | 26.3% |
| 5. Share of non- renewable energy consumption and production | The portfolio's weighted average of issuers' energy consumption and/or production from non-renewable sources as a percentage of total energy used and/or generated. | 73.6% | 66.2% |

| 6. Energy consumption intensity per high impact climate sector: a. NACE Code A (Agriculture, Forestry and Fishing) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code A | 0 GWh / million EUR revenue | 0 GWh / million EUR revenue |
|--|---|---|---|
| b. NACE Code B (Mining and Quarrying) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code B | 0 GWh / million EUR revenue | 0 GWh / million EUR revenue |
| c. NACE Code C (Manufacturing) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code C | 0.13 GWh / million EUR revenue | 0.13 GWh / million EUR revenue |
| d. NACE Code D (Electricity, Gas, Steam and Air Conditioning Supply) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code D | 2.98 GWh / million EUR revenue | 4.34 GWh / million EUR revenue |
| e. NACE Code E (Water Supply, Sewerage, Waste Management and Remediation Activities) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code E | 0.97 GWh / million EUR revenue | 1.59 GWh / million EUR revenue |
| f. NACE Code F (Construction) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code F | 0.96 GWh / million EUR revenue | 0.69 GWh / million EUR revenue |
| g. NACE Code G (Wholesale and Retail Trade Repair of Motor Vehicles and Motorcycles) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code G | 0.11 GWh / million EUR revenue | 0 GWh / million EUR revenue |
| h. NACE Code H (Transportation and Storage) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code H | 0 GWh / million EUR revenue | 0 GWh / million EUR revenue |
| i. NACE Code L (Real estate activities) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code L | 1.23 GWh / million EUR revenue | 0.26 GWh / million EUR revenue |
| 7. Activities negatively affecting biodiversity-sensitive areas | The percentage of the portfolio's market value exposed to issuers' that reported having operations in or near biodiversity sensitive areas and have been implicated in controversies with severe or very severe impacts on the environment. | 0% | 0% |
| 8. Emissions to Water | The total annual wastewater discharged (metric tons reported) into surface waters as a result of industrial or manufacturing activities associated with 1 million EUR invested in the portfolio. Companies' water emissions are apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 0.05 metric tons / million EUR invested | 0 metric tons / million EUR invested |
| 9. Hazardous waste ratio | The total annual hazardous waste (metric tons reported) associated with 1 million EUR invested in the portfolio. Companies' hazardous waste is apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 0.54 metric tons / million EUR invested | 0.92 metric tons / million EUR invested |

| 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers with very severe controversies related to the company's operations and/or products. | 0% | 0% |
|--|---|-------|-------|
| and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers that have at least one policy covering some of the UNGC principles or OECD Guidelines for Multinational Enterprises and either a monitoring system evaluating compliance with such policy or a grievance/complaints handling mechanism. | 0% | 49.8% |
| 12. Unadjusted gender pay gap | The portfolio holdings' weighted average of the difference between the average gross hourly earnings of male and female employees, as a percentage of male gross earnings. | 14.1% | 4.8% |
| 13. Board gender diversity | The portfolio holdings' weighted average of the percentage of board members who are female. For companies with a two-tier board, the calculation is based on members of the Supervisory Board only. | 37.1% | 36.9% |
| 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | The percentage of the portfolio's market value exposed to issuers with an industry tie to landmines, cluster munitions, chemical weapons or biological weapons. Note: Industry ties includes ownership, manufacturing and investments. Ties to landmines do not include related safety products. | 0% | 0% |
| 15. Investments in companies without carbon emission reduction initiatives | The percentage of the portfolio's market value exposed to issuers without a carbon emissions reduction target. | 39.1% | 26% |
| 16. Investments in companies without workplace accident prevention policies | The percentage of the portfolio's market value exposed to issuers without a workplace accident prevention policy. | 0.6% | 1.7% |

Note that in the PAI Indicators table above, for items 6a to 6i, there may be no investments in companies in the relevant NACE sector or there may be no data available for any companies in the relevant NACE sector. In such cases the table will show a value of 0 GWh / million EUR revenue.

How were the indicators for adverse impacts on sustainability factors taken into account?

The indicators for adverse impacts on sustainability factors were taken into account by applying certain exclusion strategies aligned to the PAI Indicators and by monitoring the PAI Indicators in the following manner:

1. When ensuring that a sustainable investment did not cause significant harm to any environmental or social objective, the Investment

Manager made use of various PAI Indicators. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail. The Investment Manager ensured that certain minimum standards were reached for each applicable PAI Indicator.

- 2. The product did not invest in companies materially engaged in certain activities which, in the opinion of the Investment Manager, are associated with a particularly adverse impact on sustainability. These included companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, companies with a high degree of involvement in coal extraction or coal-fired electricity generation, and companies with material revenues from fracking, for-profit prisons, civilian firearms and ammunition, weapons and weapons systems, and the production of nuclear weapons.
- 3. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact. Please refer to the section below headed "What actions have been taken to meet the environmental and/or social characteristics during the reference period?" for more detail.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, the sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights through the use of environmental and UNGC (UN Global Compact) controversies screening as an indication for alignment with OECD guidelines / UN guiding principles along with other tools including ESG scores and research as part of the investment.

The product did not invest in any company which violates, repeatedly and seriously, one or more of the ten principles of the UN Global Compact. To implement this, the Investment Manager used data from data providers which rely on international conventions such as the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, as sources of data to determine risk exposure of companies' geographies of operation and business segments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Over the reference period, the product considered principal adverse impacts on sustainability factors. This was done in the following manner:

- 1. A minimum proportion of the investments held in this product must be sustainable investments. In determining whether an investment was a sustainable investment, a number of PAI Indicators were used and where the adverse impact was considered to be excessive, in the judgement of the Investment Manager, based on whether the adverse impact breaches certain thresholds set by the Investment Manager, such investments were not deemed to be sustainable investments. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail.
- The Investment Manager's decision on whether to make an investment in a
 company, and the size of that investment, took into account the PAI Indicators
 (referred to above) relating to the social, environmental and governance
 characteristics of that company, including the adverse impact that the company
 had on sustainability.
- 3. The product did not invest in companies engaged in certain activities which, in the opinion of the Investment Manager, were associated with a particularly adverse impact on sustainability, in excess of certain thresholds. These included companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, companies with a high degree of involvement in coal extraction or coal-fired electricity generation, and companies with material revenues from fracking, for-profit prisons, civilian firearms and ammunition, weapons and weapons systems, and the production of nuclear weapons.
- 4. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact, with a view to

influencing the company to change its activities in a manner which will reduce the adverse impact.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 year to end August 2024

What were the top investments of this financial product?

The following sets out a list of the top investments (and relevant sector) of the financial product using the Global Industry Classification Standard (GICS). GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure.

The data presented in this section shows the top 15 investments (ie the greatest proportion of investments of the product) during the reference period and has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments (which were not used to promote the environmental and social characteristics of the product) are not included in the table below.

| Largest Investments | Sector | % Assets | Country |
|--|-------------|----------|----------------------|
| SBA Communications Corp | REAL ESTATE | 5.7 | United States |
| Nextera Energy Inc | UTILITIES | 5.6 | United States |
| RWE AG | UTILITIES | 5.5 | Germany |
| The Renewables Infrastructure Group Limited | UTILITIES | 3.8 | UK |
| Northland Power Inc | UTILITIES | 3.8 | Canada |
| National Grid PLC | UTILITIES | 3.7 | UK |
| Equinix Inc | REAL ESTATE | 3.3 | United States |
| American Tower Corp | REAL ESTATE | 3.1 | United States |
| Waste Management Inc | INDUSTRIALS | 3.1 | United States |
| E.ON SE | UTILITIES | 2.9 | Germany |
| International Public Partnerships Ltd | | 2.8 | UK |
| Essential Utilities Inc | UTILITIES | 2.8 | United States |
| Ormat Technologies Inc | UTILITIES | 2.8 | United States |
| Hydro One Ltd | UTILITIES | 2.7 | Canada |
| Veolia Environnement SA | UTILITIES | 2.6 | France |

Asset allocation describes the share of investments in specific assets.

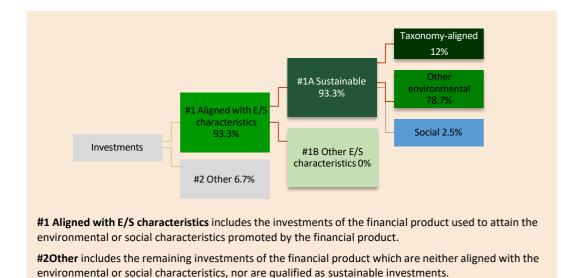

What was the proportion of sustainability-related investments?

Information on the proportion of the product which promoted environmental/social characteristics and the proportion of the product invested in sustainable investments during the reference period is provided below.

What was the asset allocation?

Based on data as at 31 August 2024, 93.3% of the investments of the product were used to meet the environmental and social characteristics promoted by the product in accordance with the binding elements of the investment strategy. The proportion of the portfolio which was invested in Sustainable Investments was 93.3%.

The remaining portion of investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including ESG-related exclusions.

- The category **#1 Aligned with E/S characteristics** covers:
- $\hbox{- The sub-category \#1A Sustainable covers environmentally and socially sustainable investments.}\\$
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In the previous reference period, the proportion of the product's assets invested in environmentally sustainable activities was 89.7%. It should be noted that in this reference period only a minority of investee companies are required to report the proportion of their revenues that are aligned with the EU Taxonomy.

Proportion of investments contributing to EU Taxonomy objectives:

| | Climate change mitigation | Climate change adaptation |
|------------------|---------------------------|---------------------------|
| As % of Turnover | 10.2% | 0% |
| As % of Capex | 17.1% | 0.5% |
| As % of Opex | 12.5% | 0.1% |

In which economic sectors were the investments made?

The following table consists of the product's exposure to sub-industries. For the purpose of the table, the Global Industry Classification Standard (GICS) has been used. GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure. The table below shows the composition of the investments held by the product, by GICS sector during the reference

period. The data presented has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments are not included in the table below.

| Sector | % Assets |
|---|----------|
| COMMUNICATION SERVICES | 0 |
| CONSUMER DISCRETIONARY | 0 |
| CONSUMER STAPLES | 2.5 |
| ENERGY | 0 |
| FINANCIALS | 1.6 |
| HEALTH CARE | 0 |
| INDUSTRIALS | 12.5 |
| INFORMATION TECHNOLOGY | 3.7 |
| MATERIALS | 0 |
| REAL ESTATE | 14.8 |
| UTILITIES | 59.3 |
| Note: EXPOSURE TO COMPANIES ACTIVE IN THE FOSSIL FUEL SECTOR (i.e. the percentage of the product's market value exposed to issuers with fossil fuels related activities, including extraction, processing, storage and transportation of petroleum products, natural gas, and thermal and metallurgical coal) | 29% |

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of sustainable investments aligned with the EU Taxonomy was 12%.

The environmental objectives to which the sustainable investments contributed were climate change mitigation and climate change adaptation.

In order to attain the environmental characteristics promoted by this product, the product invested in sustainable investments even though some investments did not meet all of the detailed criteria for "environmentally sustainable investments" within the meaning of the Taxonomy Regulation.

| Did the financial | product in | vest in fo | ssil gas | and/or | nuclear | energy | related |
|----------------------|-------------|-----------------|----------|--------|---------|--------|---------|
| activities complying | ng with the | EU Taxon | omy¹? | | | | |
| | | | | | | | |

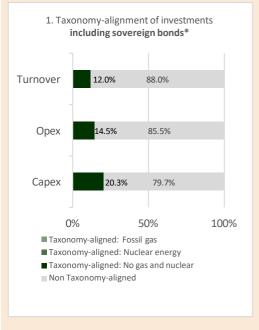

| | Yes: | | |
|---|------|---------------|-------------------|
| | | In fossil gas | In nuclear energy |
| X | No | | |

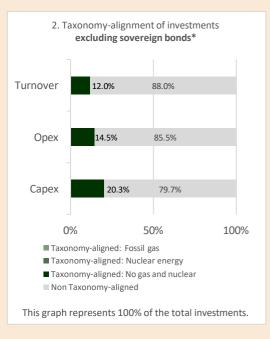

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflects the "greenness" of investee companies today.
- capital
 expenditure
 (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.
- What was the share of investments made in transitional and enabling activities?

Investments in environmentally sustainable economic activities:

| | Transitional | Enabling | |
|------------------|--------------|----------|--|
| As % of Turnover | 0% | 5.8% | |
| As % of Capex | 0.1% | 11.1% | |
| As % of Opex | 0% | 8.1% | |

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage of investments that were aligned with the EU Taxonomy was 12% in the current reference period.

The percentage of investments that were aligned with the EU Taxonomy was 0% in the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The product invested 78.7% of its assets in sustainable investments with environmental characteristics which did not qualify as environmentally sustainable under the EU Taxonomy.

What was the share of socially sustainable investments?

The product invested 2.5% of its assets in socially sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

6.7% of investments were not classified as sustainable investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including the exclusion of companies involved with certain controversial activities, and the exclusion of companies that violate, repeatedly and seriously, one or more of the ten principles of the UN Global Compact.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken to achieve the environmental and social characteristics were:

- The Investment Manager identified companies which operated in sustainable infrastructure sector and integrated an analysis of such companies' Environmental, Social and Governance ("ESG") performance into its investment analysis and investment decisions.
- The Investment Manager carried out its own assessment of the environmental performance of companies in which it invested, based on its own research and knowledge of the companies, public information and information (including specialised ESG information) and ratings from external data providers.

- The portfolio construction process excluded holdings deemed inconsistent with the Investment Manager's Responsible Investment Policy or that were involved with certain controversial sectors, as determined by the Investment Manager's Responsible Investing Committee. The product did not invest in any company which is not involved the provision of sustainable infrastructure facilities and related services, including but not limited to the supply or treatment of water, waste water and energy, the provision or maintenance or enhancement of energy or water infrastructure such as energy generation facilities and equipment or water treatment facilities, the provision, maintenance or enhancement of infrastructure designed to support the production and efficient distribution of food and crops, and the provision, maintenance or enhancement of other socially beneficial infrastructure. Further, the product did not invest in companies involved in certain activities including tobacco manufacturing, coal extraction and coal-fired electricity generation, in excess of certain thresholds.
- The Investment Manager collaborated on 21 topics and engaged with 18 companies on a range of issues, including engagement with companies which had high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact.

How did this financial product perform compared to the reference benchmark? Not applicable

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the product.

- How does the reference benchmark differ from a broad market index?
 Not Applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
 Not applicable.
- How did this financial product perform compared with the broad market index?
 Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote. Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: KBI Global Small Cap Equity Fund (the "product")

Legal entity identifier: 635400148FPOJI8KJD29

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective? Yes It made **sustainable** It promoted Environmental/Social (E/S) characteristics and investments with an while it did not have as its objective a environmental objective: ___% sustainable investment, it had a proportion of in economic activities that 70.4% of sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in economic Taxonomy activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally with an environmental objective in Χ sustainable under the EU economic activities that do not qualify as Taxonomy environmentally sustainable under the EU Taxonomy with a social objective Χ It made sustainable investments It promoted E/S characteristics, but **did not** make any sustainable investments with a social objective: ___%

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation

Sustainable

investment means an investment in an economic activity

that contributes to an environmental or social objective, provided that the

investment does not

social objective and that the investee

companies follow

good governance

practices.

significantly harm any environmental or

does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics promoted by the product were reductions in harm to the environment and climate arising from the emissions of greenhouse gases and better corporate practices that contribute to a more just society, by, for example, enhancing human capital or providing improved social opportunities to services such as finance, health care, and communications.

The Investment Manager used a range of sustainability indicators to measure the extent to which the environmental and social characteristics of the product were met. Investors should refer to the next section below for an assessment of how the sustainability indicators performed during the reference period.

The product was managed with the aim of progressively reducing net carbon emissions of investee companies and of eventually reaching net zero emissions by 2050. The product also sought to have a carbon intensity level lower than the Index. The Investment Manager monitored the carbon intensity of companies in which the product invested. Carbon intensity is a measure of greenhouse gas emissions, in tonnes, relative to the revenue of the company or portfolio. The Investment Manager obtained carbon intensity data from the Data Provider.

The environmental objective to which the sustainable investments contributed was climate change mitigation.

While the product promotes carbon emission reduction and better corporate practices, investors should be aware that this product does not have reduction of carbon emissions as its objective within the meaning of Article 9(3) of SFDR. Further, the investment strategy of the product is not continuously aligned with the Index and the Index is not used for the purpose of determining the attainment of the environmental and social characteristics promoted by the product. The Index is a broad market index and is not aligned with the environmental and social characteristics promoted by the product.

The extent of the product's impact is further described in the section below headed "How did this financial product consider principal adverse impacts on sustainability factors?". The proportion of the product that was aligned with the environmental and social characteristics is disclosed under the section below headed "What was the proportion of sustainability-related investments?". The objectives of the sustainable investments are set out under the heading "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The Investment Manager used two indicators to measure the environmental and social characteristics of the product as follows:

- The weighted average ESG rating of the product, as determined by the use of ESG ratings of companies, supplied by an external data provider of ESG research and ratings.
- The carbon intensity of the product measured by an external provider of carbon footprint measurement services.

The following shows how each indicator performed during the reference period under review. Each measure was calculated based on the portfolio holdings and relevant metric at the end of the period under review.

| Sustainability Indicator | 2024 | 2023 |
|--|------------------------------------|------------------------------------|
| Weighted Average MSCI ESG Score of the portfolio | 6.2 | 6.2 |
| Weighted Average Carbon Intensity of the portfolio | 54.8 tons CO2e / million USD sales | 70.5 tons CO2e / million USD sales |

...and compared to previous periods?

See table in the section headed "How did the sustainability indicators perform?".

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

This product invests partially in sustainable investments.

The objectives of these sustainable investments are the the reduction in harm to the environment and climate arising from the emissions of greenhouse gases and better corporate practices that contribute to a more just society by, for example, enhancing human capital or providing improved social opportunities to services such as finance, health care, and communications.

The sustainable investments contributed to these objectives through the reduction in the carbon intensity of the portfolio and through the promotion of improved corporate practices that contribute to a more just society.

Please refer to the section above headed "How did the sustainability indicators perform?" for more detail on the indicators used to assess the contribution to the objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments of the product were assessed to ensure that they do not cause significant harm to any environmental or social objective. This assessment made use of Principal Adverse Impact Indicators ("PAI Indicators"), where applicable and where data was sufficiently available, and ensured that certain minimum standards were reached for each applicable PAI Indicator.

The following PAI Indicators were used throughout the period under review.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

| PAI Indicator | Explanation | 2024 | 2023 |

| g. NACE Code G (Wholesale and Retail Trade Repair of Motor Vehicles and Motorcycles) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code G | 0.34 GWh / million EUR revenue | 0.06 GWh / million EUR revenue |
| h. NACE Code H (Transportation and Storage) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code H | 0.9 GWh / million EUR revenue | 7.3 GWh / million EUR revenue |
| i. NACE Code L (Real estate activities) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code L | 1.09 GWh / million EUR revenue | 0.25 GWh / million EUR revenue |
| 7. Activities negatively affecting biodiversity-sensitive areas | The percentage of the portfolio's market value exposed to issuers' that reported having operations in or near biodiversity sensitive areas and have been implicated in controversies with severe or very severe impacts on the environment. | 0.2% | 0.1% |
| 8. Emissions to Water | The total annual wastewater discharged (metric tons reported) into surface waters as a result of industrial or manufacturing activities associated with 1 million EUR invested in the portfolio. Companies' water emissions are apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 0 metric tons / million EUR invested | 0 metric tons / million EUR invested |
| 9. Hazardous waste ratio | The total annual hazardous waste (metric tons reported) associated with 1 million EUR invested in the portfolio. Companies' hazardous waste is apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 1.11 metric tons / million EUR invested | 2.41 metric tons / million EUR invested |
| 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers with very severe controversies related to the company's operations and/or products. | 0% | 0% |

| 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers that have at least one policy covering some of the UNGC principles or OECD Guidelines for Multinational Enterprises and either a monitoring system evaluating compliance with such policy or a grievance/complaints handling mechanism. | 3.4% | 78.6% |
|---|---|-------|-------|
| 12. Unadjusted gender pay gap | The portfolio holdings' weighted average of the difference between the average gross hourly earnings of male and female employees, as a percentage of male gross earnings. | 16.4% | 16% |
| 13. Board gender diversity | The portfolio holdings' weighted average of the percentage of board members who are female. For companies with a two-tier board, the calculation is based on members of the Supervisory Board only. | 31.4% | 31.9% |
| 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | The percentage of the portfolio's market value exposed to issuers with an industry tie to landmines, cluster munitions, chemical weapons or biological weapons. Note: Industry ties includes ownership, manufacturing and investments. Ties to landmines do not include related safety products. | 0% | 0% |
| 15. Investments in companies without carbon emission reduction initiatives | The percentage of the portfolio's market value exposed to issuers without a carbon emissions reduction target. | 49.9% | 39.2% |
| 16. Investments in companies without workplace accident prevention policies | The percentage of the portfolio's market value exposed to issuers without a workplace accident prevention policy. | 12.4% | 18.8% |

Note that in the PAI Indicators table above, for items 6a to 6i, there may be no investments in companies in the relevant NACE sector or there may be no data available for any companies in the relevant NACE sector. In such cases the table will show a value of 0 GWh / million EUR revenue.

How were the indicators for adverse impacts on sustainability factors taken into account?

The indicators for adverse impacts on sustainability factors were taken into account by applying certain exclusion strategies aligned to the PAI Indicators and by monitoring the PAI Indicators in the following manner:

1. When ensuring that a sustainable investment did not cause significant harm to any environmental or social objective, the Investment Manager made use of various PAI Indicators. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail. The Investment Manager ensured that certain minimum standards were reached for each applicable PAI Indicator.

- 2. The product did not invest in companies materially engaged in certain activities which, in the opinion of the Investment Manager, are associated with a particularly adverse impact on sustainability. These included companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, and companies with a high degree of involvement in coal extraction or coal-fired electricity generation.
- 3. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact. Please refer to the section below headed "What actions have been taken to meet the environmental and/or social characteristics during the reference period?" for more detail.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, the sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights through the use of environmental and UNGC (UN Global Compact) controversies screening as an indication for alignment with OECD guidelines / UN guiding principles along with other tools including ESG scores and research as part of the investment.

The product did not invest in any company which violates, repeatedly and seriously, one or more of the ten principles of the UN Global Compact. To implement this, the Investment Manager used data from data providers which rely on international conventions such as the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, as sources of data to determine risk exposure of companies' geographies of operation and business segments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Over the reference period, the product considered principal adverse impacts on sustainability factors. This was done in the following manner:

- 1. A minimum proportion of the investments held in this product must be sustainable investments. In determining whether an investment was a sustainable investment, a number of PAI Indicators were used and where the adverse impact was considered to be excessive, in the judgement of the Investment Manager, based on whether the adverse impact breaches certain thresholds set by the Investment Manager, such investments were not deemed to be sustainable investments. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail.
- The Investment Manager's decision on whether to make an investment in a
 company, and the size of that investment, took into account the PAI Indicators
 (referred to above) relating to the social, environmental and governance
 characteristics of that company, including the adverse impact that the company
 had on sustainability.
- 3. The product did not invest in companies engaged in certain activities which, in the opinion of the Investment Manager, were associated with a particularly adverse impact on sustainability, in excess of certain thresholds. These included companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, and companies with a high degree of involvement in coal extraction or coal-fired electricity generation.
- 4. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact, with a view to influencing the company to change its activities in a manner which will reduce the adverse impact.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 year to end August 2024

What were the top investments of this financial product?

The following sets out a list of the top investments (and relevant sector) of the financial product using the Global Industry Classification Standard (GICS). GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure.

The data presented in this section shows the top 15 investments (ie the greatest proportion of investments of the product) during the reference period and has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments (which were not used to promote the environmental and social characteristics of the product) are not included in the table below.

| Largest Investments | Sector | % Assets | Country |
|---------------------------|-------------------------------|----------|----------------------|
| Janus Henderson Group Plc | FINANCIALS | 2 | United States |
| InterDigital Inc | INFORMATION TECHNOLOGY | 1.9 | United States |
| Boise Cascade Co | INDUSTRIALS | 1.8 | United States |
| Bruker Corporation | HEALTH CARE | 1.8 | United States |
| STAG Industrial Inc | REAL ESTATE | 1.8 | United States |
| Perrigo Company Plc | HEALTH CARE | 1.7 | United States |
| Texas Roadhouse | CONSUMER DISCRETIONARY | 1.7 | United States |
| Assured Guaranty Ltd | FINANCIALS | 1.6 | United States |
| Premier Inc | HEALTH CARE | 1.5 | United States |
| Shutterstock Inc | COMMUNICATION SERVICES | 1.4 | United States |
| Commercial Mtls. | MATERIALS | 1.3 | United States |
| Cathay General Bancorp | FINANCIALS | 1.2 | United States |
| Patterson-UTI Energy Inc | ENERGY | 1.2 | United States |
| Argan Inc | INDUSTRIALS | 1.1 | United States |
| Vermilion Energy Inc | ENERGY | 1 | Canada |

What was the proportion of sustainability-related investments?

Information on the proportion of the product which promoted environmental/social characteristics and the proportion of the product invested in sustainable investments during the reference period is provided below.

What was the asset allocation?

Based on data as at 31 August 2024, 99.5% of the investments of the product were used to meet the environmental and social characteristics promoted by the product in accordance with the binding elements of the investment strategy. The proportion of the portfolio which was invested in Sustainable Investments was 70.4%.

The remaining portion of investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient

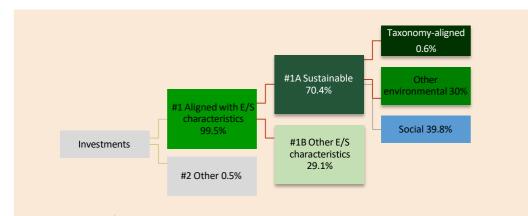

390

Asset allocation

specific assets.

describes the share of investments in

portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including ESG-related exclusions.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#20ther includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In the previous reference period, the proportion of the product's assets invested in environmentally sustainable activities was 19.5%. It should be noted that in this reference period only a minority of investee companies are required to report the proportion of their revenues that are aligned with the EU Taxonomy.

Proportion of investments contributing to EU Taxonomy objectives:

| | Climate change mitigation | Climate change adaptation |
|------------------|---------------------------|---------------------------|
| As % of Turnover | 0.6% | 0% |
| As % of Capex | 0.7% | 0% |
| As % of Opex | 0.6% | 0% |

In which economic sectors were the investments made?

The following table consists of the product's exposure to sub-industries. For the purpose of the table, the Global Industry Classification Standard (GICS) has been used. GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure. The table below shows the composition of the investments held by the product, by GICS sector during the reference period. The data presented has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments are not included in the table below.

| Sector | % Assets |
|------------------------|----------|
| COMMUNICATION SERVICES | 3.6 |
| CONSUMER DISCRETIONARY | 15.3 |
| CONSUMER STAPLES | 2.7 |
| ENERGY | 4.4 |
| FINANCIALS | 16.5 |
| HEALTH CARE | 8.7 |
| INDUSTRIALS | 19.8 |
| INFORMATION TECHNOLOGY | 12.5 |
| MATERIALS | 6.3 |
| REAL ESTATE | 7.7 |
| UTILITIES | 2.1 |
| | |

4.8%

Note: EXPOSURE TO COMPANIES ACTIVE IN THE FOSSIL FUEL SECTOR (i.e. the percentage of the product's market value exposed to issuers with fossil fuels related activities, including extraction, processing, storage and transportation of petroleum products, natural gas, and thermal and metallurgical coal)

392

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of sustainable investments aligned with the EU Taxonomy was 0.6%.

The environmental objective to which the sustainable investments contributed was climate change mitigation.

In order to attain the environmental characteristics promoted by this product, the product invested in sustainable investments even though some investments did not meet all of the detailed criteria for "environmentally sustainable investments" within the meaning of the Taxonomy Regulation.

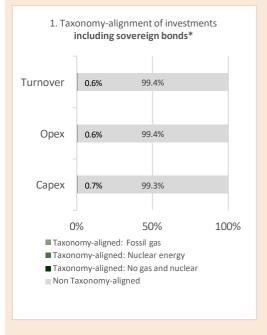

| the financial product invest in fossil gas and/or nuclear energy related tivities complying with the EU Taxonomy ¹ ? | | | | | | |
|---|------|---------------|--|-------------------|--|--|
| | Yes: | | | | | |
| | | In fossil gas | | In nuclear energy | | |
| X | No | | | | | |

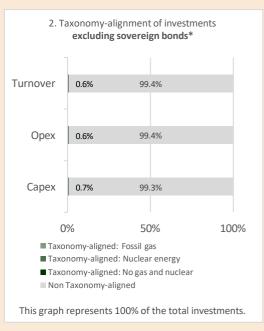

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflects the "greenness" of investee companies today.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- * For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.
- What was the share of investments made in transitional and enabling activities?

Investments in environmentally sustainable economic activities:

| | Transitional | Enabling |
|------------------|--------------|----------|
| As % of Turnover | 0% | 0.6% |
| As % of Capex | 0% | 0.6% |
| As % of Opex | 0% | 0.6% |

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage of investments that were aligned with the EU Taxonomy was 0.6% in the current reference period.

The percentage of investments that were aligned with the EU Taxonomy was 0% in the previous reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The product invested 30% of its assets in sustainable investments with environmental characteristics which did not qualify as environmentally sustainable under the EU Taxonomy.

What was the share of socially sustainable investments?

The product invested 39.8% of its assets in socially sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

29.6% of investments were not classified as sustainable investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including the exclusion of companies involved with certain controversial activities, and the exclusion of companies that violate, repeatedly and seriously, one or more of the ten principles of the UN Global Compact.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken to achieve the environmental and social characteristics were:

• The Investment Manager integrated an analysis of companies' ESG performance into its investment analysis and investment decisions. Companies were rated on an AAA-CCC scale relative to the standards and performance of their industry peers, which was then translated into an ESG score. The Investment Manager got a single ESG score for each stock from MSCI ESG Research (the "Data Provider"), each stock receiving a score of between 0 and 10, with the highest scoring company receiving a 10. The Investment Manager favoured higher score stocks where possible and its aim was for the portfolio to have an equal or higher weighted ESG score than its comparable benchmark.

- The portfolio construction process excluded holdings deemed inconsistent with the Investment Manager's Responsible Investment Policy or that were involved with certain controversial sectors, as determined by the Investment Manager's Responsible Investing Committee. Further, the product did not invest in companies involved in certain activities including tobacco manufacturing, coal extraction and coal-fired electricity generation, in excess of certain thresholds.
- The Investment Manager collaborated on 20 topics and engaged with 1 company on a range of issues, including engagement with companies which had high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact.

How did this financial product perform compared to the reference benchmark? Not applicable

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the product.

- How does the reference benchmark differ from a broad market index?
 Not Applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
 Not applicable.
 - How did this financial product perform compared with the broad market index?
 Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: KBI Circular Economy Fund (the "product")

Legal entity identifier: 213800V8N6V68KO7Z914

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective? Yes No It made **sustainable** It promoted Environmental/Social (E/S) characteristics and investments with an while it did not have as its objective a environmental objective: ___% sustainable investment, it had a proportion of in economic activities that 99.2% of sustainable investments qualify as environmentally sustainable under the EU with an environmental objective in economic Χ Taxonomy activities that qualify as environmentally sustainable under the EU Taxonomy in economic activities that do not qualify as environmentally with an environmental objective in sustainable under the EU economic activities that do not qualify as environmentally sustainable under the EU Taxonomy Taxonomy with a social objective It promoted E/S characteristics, but **did not** It made sustainable investments make any sustainable investments with a social objective: ___%

investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Sustainable

a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Taxonomy or not.

The **EU Taxonomy** is

The environmental and social characteristics promoted by the product are the advancement of the Circular Economy by following the 3R approach: **Reduce, Reuse and Recycle**: resource usage is minimised (reduce), the reuse of products and component parts is maximised (reuse), and raw materials are reused (recycle). The advancement of the 3R approach is, in the opinion of the Investment Manager, a benefit to the environment and to society.

This is achieved by investing in a portfolio of companies which, in the opinion of the Investment Manager, on an aggregate portfolio basis, advance the Circular Economy. No reference benchmark has been designated for the purpose of attaining the environmental characteristics promoted by the product.

The Investment Manager used a range of sustainability indicators to measure the extent to which the environmental and social characteristics of the product were met. Investors should refer to the next section below for an assessment of how the sustainability indicators performed during the reference period.

The product was managed with the aim of progressively reducing net carbon emissions of investee companies and of eventually reaching net zero emissions by 2050. The Investment Manager monitored the carbon intensity of companies in which the product invested. Carbon intensity is a measure of greenhouse gas emissions, in tonnes, relative to the revenue of the company or portfolio. The Investment Manager obtained carbon intensity data from the Data Provider.

The environmental objectives to which the sustainable investments contributed were climate change mitigation, climate change adaptation, and transition to a circular economy.

While the product promoted carbon emission reduction and better corporate practices, investors should be aware that this product does not have reduction of carbon emissions as its objective within the meaning of Article 9(3) of SFDR.

The extent of the product's impact is further described in the section below headed "How did this financial product consider principal adverse impacts on sustainability factors?". The proportion of the product that was aligned with the environmental and social characteristics is disclosed under the section below headed "What was the proportion of sustainability-related investments?". The objectives of the sustainable investments are set out under the heading "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The Investment Manager used three indicators to measure the environmental and social characteristics of the product as follows:

- The percentage of investee companies whose revenues are positively aligned with the achievement of the United Nations Sustainable Development Goals.
- The weighted average ESG rating of the product, as determined by the use of ESG ratings of companies, supplied by an external data provider of ESG research and ratings.
- The carbon intensity of the product measured by an external provider of carbon footprint measurement services.

The following shows how each indicator performed during the reference period under review. Each measure was calculated based on the portfolio holdings and relevant metric at the end of the period under review.

| Sustainability Indicator | 2024 |
|--|-------------------------------------|
| Percentage of investee companies whose revenues are positively aligned with the achievement of the UN SDGs | 100% |
| Weighted Average MSCI ESG Score of the portfolio | 7.6 |
| Weighted Average Carbon Intensity of the portfolio | 185.3 tons CO2e / million USD sales |

...and compared to previous periods?

Not applicable.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

This product invested partially in sustainable investments.

The objectives of these sustainable investments were the advancement of the Circular Economy.

Please refer to the section above headed "How did the sustainability indicators perform?" for more detail on the indicators used to assess the contribution to the objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments of the product were assessed to ensure that they do not cause significant harm to any environmental or social objective. This assessment made use of Principal Adverse Impact Indicators ("PAI Indicators"), where applicable and where data was sufficiently available, and ensured that certain minimum standards were reached for each applicable PAI Indicator.

The following PAI Indicators were used throughout the period under review.

| PAI Indicator | Explanation | 2024 |
|------------------|---|---------------|
| 1. GHG Emissions | Sum of portfolio companies' Carbon Emissions - Scope 1 (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 415 tons CO2e |

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

| 1. GHG Emissions | Sum of portfolio companies' Carbon Emissions - Scope 2 (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 109 tons CO2e |
|--|--|--|
| 1. GHG Emissions | Sum of portfolio companies' Scope 3 - Total Emission Estimated (tCO2e) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash. | 1,486 tons CO2e |
| 1. GHG Emissions | The total annual Scope 1, Scope 2, and estimated Scope 3 GHG emissions associated with the market value of the portfolio. Companies' carbon emissions are apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 2,006 tons CO2e |
| 2. Carbon Footprint | Sum of portfolio companies' Total GHG Emissions (Scopes 1, 2 and 3) weighted by the portfolio's value of investment in a company and by the company's most recently available enterprise value including cash, adjusted to show the emissions associated with 1 million EUR invested in the portfolio. | 338 tons CO2e / million EUR invested |
| 3. GHG Intensity of investee companies | The portfolio's weighted average of its holding issuers' GHG Intensity (Scope 1, Scope 2 and estimated Scope 3 GHG emissions/EUR million revenue). | 808 tons CO2e / million EUR sales |
| 4. Exposure to companies active in the fossil fuel sector | The percentage of the portfolio's market value exposed to issuers with fossil fuels related activities, including extraction, processing, storage and transportation of petroleum products, natural gas, and thermal and metallurgical coal. | 5.7% |
| 5. Share of non- renewable energy consumption and production | The portfolio's weighted average of issuers' energy consumption and/or production from non-renewable sources as a percentage of total energy used and/or generated. | 73.6% |
| 6. Energy consumption intensity per high impact climate sector: a. NACE Code A (Agriculture, Forestry and Fishing) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code A | 0 GWh / million EUR revenue |
| b. NACE Code B (Mining and Quarrying) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code B | 0 GWh / million EUR revenue |
| c. NACE Code C (Manufacturing) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code C | 0.64 GWh / million EUR revenue |
| d. NACE Code D (Electricity, Gas, Steam and Air Conditioning Supply) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code D | 2.48 GWh / million EUR revenue |
| e. NACE Code E (Water Supply, Sewerage, Waste Management and Remediation Activities) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code E | 0.9 GWh / million EUR revenue |

| | | 1 |
|---|---|---|
| f. NACE Code F (Construction) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code F | 0.14 GWh / million EUR revenue |
| g. NACE Code G (Wholesale and Retail Trade Repair of Motor Vehicles and Motorcycles) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code G | 0.05 GWh / million EUR revenue |
| h. NACE Code H (Transportation and Storage) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code H | 0 GWh / million EUR revenue |
| i. NACE Code L (Real estate activities) | The portfolio's weighted average of Energy Consumption Intensity (GwH/million EUR revenue) for issuers classified within NACE Code L | 0.01 GWh / million EUR revenue |
| 7. Activities negatively affecting biodiversity-sensitive areas | The percentage of the portfolio's market value exposed to issuers' that reported having operations in or near biodiversity sensitive areas and have been implicated in controversies with severe or very severe impacts on the environment. | 0% |
| 8. Emissions to Water | The total annual wastewater discharged (metric tons reported) into surface waters as a result of industrial or manufacturing activities associated with 1 million EUR invested in the portfolio. Companies' water emissions are apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 0 metric tons / million EUR invested |
| 9. Hazardous waste ratio | The total annual hazardous waste (metric tons reported) associated with 1 million EUR invested in the portfolio. Companies' hazardous waste is apportioned across all outstanding shares and bonds (based on the most recently available enterprise value including cash). | 1.15 metric tons / million EUR invested |
| 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers with very severe controversies related to the company's operations and/or products. | 0% |
| 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises | The percentage of the portfolio's market value exposed to issuers that have at least one policy covering some of the UNGC principles or OECD Guidelines for Multinational Enterprises and either a monitoring system evaluating compliance with such policy or a grievance/complaints handling mechanism. | 0% |
| 12. Unadjusted gender pay gap | The portfolio holdings' weighted average of the difference between the average gross hourly earnings of male and female employees, as a percentage of male gross earnings. | 14.2% |

| 13. Board gender diversity | The portfolio holdings' weighted average of the percentage of board members who are female. For companies with a two-tier board, the calculation is based on members of the Supervisory Board only. | 38.6% |
|--|--|-------|
| 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | The percentage of the portfolio's market value exposed to issuers with an industry tie to landmines, cluster munitions, chemical weapons or biological weapons. Note: Industry ties includes ownership, manufacturing and investments. Ties to landmines do not include related safety products. | 0% |
| 15. Investments in companies without carbon emission reduction initiatives | The percentage of the portfolio's market value exposed to issuers without a carbon emissions reduction target. | 51.6% |
| 16. Investments in companies without workplace accident prevention policies | The percentage of the portfolio's market value exposed to issuers without a workplace accident prevention policy. | 3.6% |

Note that in the PAI Indicators table above, for items 6a to 6i, there may be no investments in companies in the relevant NACE sector or there may be no data available for any companies in the relevant NACE sector. In such cases the table will show a value of 0 GWh / million EUR revenue.

How were the indicators for adverse impacts on sustainability factors taken into account?

The indicators for adverse impacts on sustainability factors were taken into account by applying certain exclusion strategies aligned to the PAI Indicators and by monitoring the PAI Indicators in the following manner:

- 1. When ensuring that a sustainable investment did not cause significant harm to any environmental or social objective, the Investment Manager made use of various PAI Indicators. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail. The Investment Manager ensured that certain minimum standards were reached for each applicable PAI Indicator.
- 2. The product did not invest in companies materially engaged in certain activities which, in the opinion of the Investment Manager, are associated with a particularly adverse impact on sustainability. These included companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, companies with a high degree of involvement in coal extraction or coal-fired electricity generation, and companies with material revenues from fracking, for-profit prisons, civilian firearms and ammunition, weapons and weapons systems, and the production of nuclear weapons.

3. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact. Please refer to the section below headed "What actions have been taken to meet the environmental and/or social characteristics during the reference period?" for more detail.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, the sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights through the use of environmental and UNGC (UN Global Compact) controversies screening as an indication for alignment with OECD guidelines / UN guiding principles along with other tools including ESG scores and research as part of the investment.

The product did not invest in any company which violates, repeatedly and seriously, one or more of the ten principles of the UN Global Compact. To implement this, the Investment Manager used data from data providers which rely on international conventions such as the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, as sources of data to determine risk exposure of companies' geographies of operation and business segments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Over the reference period, the product considered principal adverse impacts on sustainability factors. This was done in the following manner:

- 1. A minimum proportion of the investments held in this product must be sustainable investments. In determining whether an investment was a sustainable investment, a number of PAI Indicators were used and where the adverse impact was considered to be excessive, in the judgement of the Investment Manager, based on whether the adverse impact breaches certain thresholds set by the Investment Manager, such investments were not deemed to be sustainable investments. Please refer to the section above headed "How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?" for more detail.
- The Investment Manager's decision on whether to make an investment in a
 company, and the size of that investment, took into account the PAI Indicators
 (referred to above) relating to the social, environmental and governance
 characteristics of that company, including the adverse impact that the company
 had on sustainability.
- 3. The product did not invest in companies engaged in certain activities which, in the opinion of the Investment Manager, were associated with a particularly adverse impact on sustainability, in excess of certain thresholds. These included companies involved in the manufacture of tobacco products, companies with any involvement in certain types of controversial weapons, companies with a high degree of involvement in coal extraction or coal-fired electricity generation, and companies with material revenues from fracking, for-profit prisons, civilian firearms and ammunition, weapons and weapons systems, and the production of nuclear weapons.
- 4. The Investment Manager engaged with companies on a range of issues, including engagement with companies which have high adverse impact, with a view to influencing the company to change its activities in a manner which will reduce the adverse impact.

What were the top investments of this financial product?

The following sets out a list of the top investments (and relevant sector) of the financial product using the Global Industry Classification Standard (GICS). GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure.

The data presented in this section shows the top 15 investments (ie the greatest proportion of investments of the product) during the reference period and has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments (which were not used to promote the environmental and social characteristics of the product) are not included in the table below.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 19
September 2023 to end August 2024

| Largest Investments | Sector | % Assets | Country |
|-------------------------------------|------------------------|----------|----------------------|
| Veolia Environnement SA | UTILITIES | 4.6 | France |
| Xylem Inc | INDUSTRIALS | 4 | United States |
| Waste Connections Inc | INDUSTRIALS | 3.8 | Canada |
| Halma PLC | INFORMATION TECHNOLOGY | 3.4 | UK |
| Graphic Packaging Hldg | MATERIALS | 3.3 | United States |
| Waste Management Inc | INDUSTRIALS | 3.3 | United States |
| American Water Works Company Inc | UTILITIES | 3 | United States |
| ASML Holding NV | INFORMATION TECHNOLOGY | 3 | Netherlands |
| Equinix Inc | REAL ESTATE | 2.8 | United States |
| Coway Co Limited | CONSUMER DISCRETIONARY | 2.8 | South Korea |
| Iberdrola SA | UTILITIES | 2.7 | Spain |
| Crown Holdings Inc | MATERIALS | 2.6 | United States |
| Kerry Group Plc | CONSUMER STAPLES | 2.5 | Ireland |
| United Utilities Group Plc | UTILITIES | 2.5 | UK |
| Aecom | INDUSTRIALS | 2.5 | United States |

What was the proportion of sustainability-related investments?

Information on the proportion of the product which promoted environmental/social characteristics and the proportion of the product invested in sustainable investments during the reference period is provided below.

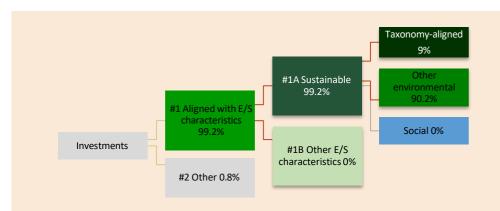

What was the asset allocation?

Based on data as at 31 August 2024, 99.2% of the investments of the product were used to meet the environmental and social characteristics promoted by the product in accordance with the binding elements of the investment strategy. The proportion of the portfolio which was invested in Sustainable Investments was 99.2%.

The remaining portion of investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including ESG-related exclusions.

Asset allocation describes the share of investments in

specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#20ther includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

It should be noted that in this reference period only a minority of investee companies are required to report the proportion of their revenues that are aligned with the EU Taxonomy.

Proportion of investments contributing to EU Taxonomy objectives:

| | Climate change mitigation | Climate change adaptation | Transition to a circular economy |
|------------------|---------------------------|---------------------------|----------------------------------|
| As % of Turnover | 6.4% | 0% | 1.1% |
| As % of Capex | 6.2% | 0% | 0.9% |
| As % of Opex | 5.4% | 0.2% | 0.9% |

In which economic sectors were the investments made?

The following table consists of the product's exposure to sub-industries. For the purpose of the table, the Global Industry Classification Standard (GICS) has been used. GICS is a four-tiered industry classification system consisting of 11 sectors. It is a commonly used industry framework to determine sector exposure. The table below shows the composition of the investments held by the product, by GICS sector during the reference period. The data presented has been calculated based on an average of the value of investments traded and held at each quarter end date within the reference period. Cash and ancillary liquidity instruments are not included in the table below.

| Sector | % Assets |
|------------------------|----------|
| COMMUNICATION SERVICES | 0 |
| CONSUMER DISCRETIONARY | 5.2 |
| CONSUMER STAPLES | 3.6 |
| ENERGY | 0 |
| FINANCIALS | 0 |

| HEALTH CARE | 0.1 |
|------------------------|------|
| INDUSTRIALS | 33.9 |
| INFORMATION TECHNOLOGY | 18.7 |
| MATERIALS | 13 |
| REAL ESTATE | 3 |
| UTILITIES | 20.6 |

Note: EXPOSURE TO COMPANIES ACTIVE IN THE FOSSIL FUEL SECTOR (i.e. the percentage of the product's market value exposed to issuers with fossil fuels related activities, including extraction, processing, storage and transportation of petroleum products, natural gas, and thermal and metallurgical coal)

5.7%

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of sustainable investments aligned with the EU Taxonomy was 9%.

The environmental objectives to which the sustainable investments contributed were climate change mitigation, climate change adaptation, and transition to a circular economy.

In order to attain the environmental characteristics promoted by this product, the product invested in sustainable investments even though some investments did not meet all of the detailed criteria for "environmentally sustainable investments" within the meaning of the Taxonomy Regulation.

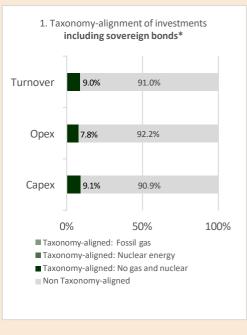

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

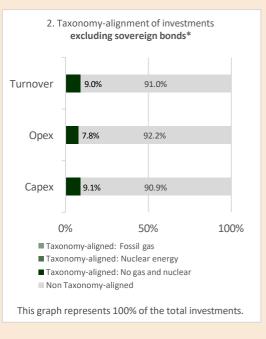

Taxonomy-aligned activities are expressed as a share of:

- turnover reflects the "greenness" of investee companies today.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

Investments in environmentally sustainable economic activities:

| | Transitional | Enabling | |
|------------------|--------------|----------|--|
| As % of Turnover | 0% | 2.6% | |
| As % of Capex | 0.1% | 3% | |
| As % of Opex | 0% | 2.6% | |

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable.

sustainable

investments with an environmental

objective that do

economic activities

under Regulation (EU) 2020/852.

not take into account the criteria for environmentally

sustainable

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The product invested 90.2% of its assets in sustainable investments with environmental characteristics which did not qualify as environmentally sustainable under the EU Taxonomy.

What was the share of socially sustainable investments?

The product invested 0% of its assets in socially sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

0.8% of investments were not classified as sustainable investments comprised of holdings in listed companies (held for the purpose of investment growth and efficient portfolio management) and cash and related ancillary liquidity instruments (held for the purpose of ancillary liquidity and efficient portfolio management) in accordance with the investment policy of the product. Minimum environmental and social safeguards continued to apply in the selection of these investments including the exclusion of companies involved with certain controversial activities, and the exclusion of companies that violate, repeatedly and seriously, one or more of the ten principles of the UN Global Compact.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken to achieve the environmental and social characteristics were:

- The Investment Manager identified companies which operated in the Circular Economy sector and integrated an analysis of such companies' Environmental, Social and Governance ("ESG") performance into its investment analysis and investment decisions.
- The Investment Manager carried out its own assessment of the environmental performance of companies in which it invested, based on its own research and

- knowledge of the companies, public information and information (including specialised ESG information) and ratings from external data providers.
- The portfolio construction process excluded holdings deemed inconsistent with the Investment Manager's Responsible Investment Policy or that were involved with certain controversial sectors, as determined by the Investment Manager's Responsible Investing Committee. The product did not invest in any company which is not involved in advancing the Circular Economy. Further, the product did not invest in companies involved in certain activities including tobacco manufacturing, coal extraction and coal-fired electricity generation, in excess of certain thresholds.
- The Investment Manager collaborated on 21 topics and engaged with 10 companies on a range of issues, including engagement with companies which had high adverse impact (as measured by the PAI Indicators and by other factors), with a view to influencing the company to change its activities in a manner which will reduce the adverse impact.

How did this financial product perform compared to the reference benchmark? Not applicable

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the product.

- How does the reference benchmark differ from a broad market index?
 Not Applicable.
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

- How did this financial product perform compared with the reference benchmark?
 Not applicable.
- How did this financial product perform compared with the broad market index?
 Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.
